Dorset, or DORSETSHIRE, a county of England, bounded N. by the counties of Somerset and Wilts, E. by Hampshire, S. by the British Channel, and W. by the counties of Devon and Somerset. Area, 1,006 sq. m. — Desc. Diversified by hill and dale in the S., level in the N., and traversed in the centre by chalk downs, on which large numbers of sheep are pastured. Rivers, The Stour, Frome, Piddle, Char, and Wey. There are several mineral waters. Prod. Wheat, barley, hemp, and butter. Manuf. Twine, cordage, netting, sail-cloth, linens, silks and woollens. Cap. Dorchester. Pop. (1895) 197,715.

Dor'set, in Illinois, a village of DeKalb co., about 66 miles W. by S. of Chicago.

Dor'set, in Ohio, a post-village of Ashtabula co., about 175 miles N.E. of Columbus.

Dor'set, in Vermont, a post-village and twp. of Bennington co., about 90 m. S.S.W. of Montpelier.

Dor'set, CHARLES SACKVILLE, 6TH EARL OF, an English poet, b. 1637; d. 1706. He was distinguished as the "Necenas" of his age and country, and himself the author of many popular idylls, songs, and satires.

Dorsibranchia'ta, DORSIBRANCHIATE, *n.* (Zool.) A name given by Cuvier to an order of *Annelida*, or red-blooded worms, which have their organs, and particularly their gills, distributed about equally throughout the middle part of the body. The Nereis, or Sea-centipede, is an example of this order.

Dorsiferous, **Dorsiparous**, *a.* (Bot.) Bearing or producing seeds on the back of the leaves.

Dorste'nia, *n.* [In honor of Theodore Dorsten, a German botanist.] (Bot.) A genus of plants, ord. *Moraceae*. The rhizomes and roots of several species have been supposed to be antidotes to the bites of venomous reptiles; those of *D. contrayerva* and *braziliensis* have been employed in medicine for their stimulant, tonic, and diaphoretic properties.

Dor'sum, *n.* [Lat.] (Anat.) The back.

—The ridge or back of a hill.

Dort, or DORDRECHT, a very ancient town of Holland, situated on an island formed by the Meuse, 11 m. S.E. of Rotterdam. From its admirable harbor, *D.* carries on a considerable export trade, especially in timber, which is floated down the Rhine in huge rafts; also earthenware, flax, yarn, corn, salt, and oil. The trade of the town is almost exclusively the manufacture of snuff, and sugar-boiling. The first meeting of the States of Holland after their successful revolt from Spanish dominion was held here in 1572, when William, Prince of Orange, was made stadtholder. The celebrated Synod of Dort assembled Nov. 13, 1618, and ended its sittings May 25, 1619. It was a meeting of the Protestant clergy for the purpose of deciding whether Calvinism or Arminianism is the true doctrine of Scripture, and they declared in favor of the former system. *D.* is the birthplace of the two De Witts, (q. v.) Pop. 25,181.

Dortmund, (*dort'moond*), a walled town of Prussia, on the Emser, 40 m. N.E. of Cologne. Manuf. Woollens, linens, cottons, nails, and tobacco. Pop. 33,433.

Dor'y, **Dor'ree**, **John Dory**, an acanthopterygian fish, type of the genus *Zeus*, distinguished by having the spinous portions of the dorsal and anal fins separated by a deep emargination from the soft-rayed portion, and having the base of all the vertical fins, and the carina of the belly anterior to the anal fin, furnished with spines. There are several species. The common *D.*, *Zeus faber*, native of the Atlantic, Northern, and Mediterranean seas, is distinguished by its large and long head, its dusky green color, accompanied by a strong gilt tinge, and particularly by a large, oval dusky spot on each

Fig. 555. — COMMON DORY.

(Zeus faber.)

side of the body; the mouth is wide, the lower jaw longer than the upper, the teeth small and sharp, and the eyes large; the whole body is covered with very small scales, and marked by a curved lateral line, which, descending rather suddenly from the gill-covers, passes on to the tail; the back is much arched, and furnished with a row of strong small prickles, which are also continued along the curve of the abdomen; the tail is of a moderate size, and rounded at the end. The *D.* is of an extremely voracious nature, preying on the smaller fishes and their spawn, as well as on various kinds of crustacea and marine insects. The form of the *D.* is extremely forbidding, so much so as to deter our ancestors from tasting it; and although its flesh is now esteemed de-

licious food, its reputation among epicures is but of modern date. The name is said to be derived from the French *jaune* (yellow), and *dorie*, corrupted into John Dory. In general, it is from 12 to 15 inches in length, though it sometimes arrives at a far superior size, and of the weight of 10 or 12 pounds.

Dose, *n.* [Fr.; Gr. *dosis*, from *didomi*, to give.] The quantity of medicine given or prescribed to be taken at one time; as, a *dose* of jalap. — Anything given to be swallowed; anything nauseous that one is obliged to take; as, a *dose* of insome flattery. — A quantity; a portion; as much as a person can swallow.

"He married his punctual *dose* of wives." — Hudibras.

—*v. a.* [Fr. *doser*.] To give in doses; to proportion a medicine properly to the patient or disease. — To give medicine or physic to. — To give anything unpalatable or nauseous to; as, *dosed* with unskilful advice.

Dos'el, **Dor'sale**, **Dos'ser**, *n.* (Arch.) Hangings around the walls of a hall, or at the east end, and sometimes the sides, of the chancel of a church, made of tapestry or carpet-work, and frequently decorated with silk and gold and silver tissue. — A kind of ornamental and rich stuff for the back of a chair, a throne, or a screen of ornamental wood-work.

Dositheans, *n. pl.* (Ecc. Hist.) The name of a religious sect which sprung up in the first century of the Christian era. Their principal tenets consisted in believing in the divine mission of their leader, Dositheus, from whom they derived their name, and in rejecting the authority and inspiration of the prophets.

Dosology, *n.* [Gr. *dosis*, dose, and *logos*, discourse.] A discourse or treatise on the practice of administering medicinal doses.

Dos'ser, *n.* [From Lat. *dorsum*.] A panier, or market-basket.

Dos'sil, *n.* [From L. Lat. *duciculus*.] (Surg.) A pledget; a nodule or piece of lint to be laid on a sore.

Dost, (*dust*), The second sing. person of *do*, used in the solemn style; as, thou *dost*.

"Why then *dost* treat me with rebukes?" — Addison.

Dot, *n.* [Probably from A. S. *dyttan*, to close or stop up; O. Eng. *dot*, a small lump or pat; Scot. *dottle*, a small particle; allied to *jet*.] A small point or spot, made with a pen or other pointed instrument; a speck, used as a mark in writing.

(Mus.) A point placed after a note to increase its duration one half. Formerly the dot was called the *point of perfection*; because a note, when dotted, attained its greatest length, or, in other words, was perfected. Dotted notes are also termed *notes of prolation*. Inasmuch as a semibreve is as long as two minims, so is a dotted semibreve equal to three minims. A double dot placed after a note increases it to three-fourths its original value; thus, a double-dotted semibreve would be equal to three minims and a half. Rests may also be increased by the addition of dots; thus, a dotted semibreve rest is as long as a semibreve and a minim rest. A double-dotted rest is lengthened in the same manner as the sound of a double-dotted note. Double dots are rarely affixed to semibreves or minims. When dots are placed at the sides of double bars, they indicate that the portions on the dotted sides are to be repeated. They are sometimes attached to single bars for precisely the same purpose.

(Law.) [Fr. *dot*; Lat. *dos*, a marriage-portion.] A dowry; a marriage portion. (Used in Louisiana.)

—*v. a.* To mark with a dot or dots; as, to *dot* the *i's* in a letter. — To mark, variegate, or diversify with small, detached objects; as, a field *dotted* with daisies.

—*v. n.* To make dots, specks, or spots.

Do'tage, *n.* [See DOTE.] Imbecility of mind, or feebleness of understanding, especially in old age; second childishness; senility.

"From Marlborough's eyes the streams of *dotage* flow." Dr. Johnson.

—Doting or excessive fondness.

"Thank that fond *dotage* which you so much scorn." — Dryden.

Do'tal, *a.* [Fr., from Lat. *dotalis*, from *dos*, a dowry.] Pertaining to dowry, or to a woman's marriage portion; constituting dowry, or comprised in it.

Do'tard, *n.* [From DOTE.] A man in his second childhood; one whose understanding is impaired by age; one who is foolishly fond.

Dotat'ion, *n.* [Fr., from L. Lat. *dotatio*, from *dos*, *dotis*, a dowry.] Act of endowing, or of bestowing a marriage portion on a woman; act of presenting with a dowry. — Endowment; establishment of funds for support of a hospital, or other charitable institution.

Dote, *v. n.* [Belg. *doten*, *dutten*; D. *dutten*, to dote; Fr. *radoter*, to dote, to rave. See IDIOT.] To have the intelligence impaired by age, so that the mind wanders or wavers; to be silly, imbecile, or insane. — To regard with excessive fondness; to love foolishly, or to excess; — preceding *on* or *upon*; as, to *dote* on a woman.

Dot'er, *n.* One who dotes, maunders, or raves; a dotard. — A person who is fondly, weakly, and foolishly in love.

Doth, (*duth*), The third person singular of *do*, used in the solemn style.

Doth'an, a town of Palestine, W. of the Sea of Galilee. Near this place Joseph was sold by his brethren (*Gen.* xxxvii. 17), and the Syrians were smitten with blindness at Elisha's word (*2 Kings* vi. 13).

Dot'ingly, *adv.* In a doting manner; by excessive fondness; as, "to wedlock *dotingly* betrayed." — Dryden.

Dot'ingness, *n.* Imbecility. — Excessive fondness.

Do'tis, a market-town of Hungary, 12 m. from Komorn. Manuf. Woollens and porcelain.

Dot'ish, *a.* Weak; imbecile; amorous.

Dot'tard, *n.* A tree decayed or pollarded.

Dot'ted, *p. a.* Marked with dots or small spots; as, a *dotted* card.

—Diversified with small, detached objects; as, a *dotted* landscape.

Dotted note. (Mus.) See DOT.

Dot'terel, Dot'trel, n. [From DOTE.] (Zool.) See PLOVER.

—A stupid, silly person; a dupe.

Do'ty's Island, in Wisconsin, an island of Winnebago co., in Fox River, at the outlet of Lake Winnebago, abt. half a mile S. of Menasha. It contains abt. 750 acres of very fertile land.

Do'tyville, in Wisconsin, a P. O. of Fond du Lac co.

Douai, or **DOUAY,** (doo'ay,) the Roman *Duacum*, a fortified town of France, dep. Nord, on the Scarpe, 18 m. S. of Lille. It existed in the time of Caesar; it is noted for its university and schools. *Manuf.* Lace, cottons, gauzes, glass, soap, earthenware, and sugar. *Pop.* 24,105. The English translation of the Bible known as the *Douai Bible*, made at the Roman Catholic college of the town, is the only English translation which is sanctioned by the Pope, and was published at Douai in 1609. It only contains the Old Testament, as the English college at Rheims had printed a translation of the New in 1582.

Douane, (doo-ān') n. [Fr.; lt. *dogana*.] In France, a custom-house.

Donanier, (doo-a-neer') n. A French custom-house officer.

Doub'-grass, n. (Bot.) Same as Dhob-grass. See CYNODON.

Double, (dub'l.) a. [Fr.; Lat. *duplus, duplex*—*du*, root of *duo*, two, and *plico*, to fold. See PLY.] Twofold; twice as much; twice as large.

"His cares must still be double to his joys."—Ben Jonson.

—Two of a sort together; one corresponding to the other; being in pairs; containing the same quantity or length repeated; having one added to another; of two kinds; as, a *double chin*.

"Darkness and tempest make a double night."—Dryden.

—Deceitful; acting two parts, one openly, the other in secret.

"Ever double in his words and meaning."—Shaks.

(Bot.) See FLOWER.

—adv. Twice over; twofold; as, he is *double* my age.

—v. a. [Fr. *doubler*.] To fold over; to put one part over another; to fold; as, to *double* a sheet of paper; sometimes preceding up or down.

"He brought his sermons, psalms, and graces, And doubled down the useful places."—Prior.

—To increase, multiply, or extend by adding an equal sum, value, quantity, or length; to duplicate; to repeat; to add; as, to *double* an amount.

—To contain twice as much; to add one to another in the same order; to be worth twice as much as; to be the double of.

"Doubling his pleasures, and his cares dividing."—Rogers.

—To sail around a head-land, cape, point, &c.; as, to *double* Cape Horn.

(Mil.) To unite two ranks of files in one.

—v. n. To increase twofold, or to twice the sum, number, value, quantity, size, or length; to increase or grow to twice as much.

"I am resolved to double till I win."—Dryden.

—To turn back or wind in running; to retrace one's course over the same ground; as, to *double* a fox.—To play tricks; to use sleights; to mystify.

(Printing.) To repeat the setting up of a word or sentence by mistake or oversight.

To *double upon.* (Mil.) To place between two fires.

—n. Twice as much; twice the number, sum, value, size, quantity, or length; as, it increased to *double*.—A turn in running to evade or escape pursuers; a trick; a shift; an artifice to deceive; as, "false steps or *doubles*." (Addison)—A doubling; a fold; anything lapped or folded over; a breech-cloth; a napkin; as, a baby's *double*.—A counterpart; a person or thing precisely resembling another.—A small roofing-slate.—Strong beer; beer of extra potency, as, "Here's a pot of good *double*, neighbor."

Shaks.

Doub'-le-acting Pump, n. (Hydraul.) A pump which lifts and forces water at the same time, by means of a solid piston, and an entrance- and exit-valve communicating with each side.

Doub'-le-bar, n. (Mus.) A term applied to two straight parallel lines drawn close together perpendicularly through the staff, for the purpose of dividing the various strains of a movement.

Doub'-le-base, Doub'-le-bass, n. (Mus.) Same as CONTRA-BASSO, *q. v.*

Doub'-le-biting, a. Cutting on either side; as, a *double-biting* axe.

Doub'-le Branches, in Georgia, a post-village of Lincoln co.

Doub'-le-breasted, a. That may fold twice over the breast; as, a *double-breasted* coat.

Doub'-le Bridges, in Georgia, a village of Upson co., abt. 11 miles S.W. of Thomaston.

Doub'-le Bridges, in Tennessee, a P. O. of Dyer co.

Doub'-le Bridges, in Virginia, a post office of Lunenburg co.

Doub'-le Cabins, in Georgia, a village of Henry co., abt. 65 miles W.N.W. of Milledgeville.

Doub'-le-charge, v. a. To give a double charge to; as, to *double-charge* a gun.

Doub'-le-count'erpoin't, n. (Mus.) When, in two-part composition, the parts are so composed that the upper one may be inverted an octave lower, so as to become the under part, whilst the other retains its place unaltered, it is called a *double counterpoint* in the octave.

Double-cylinder Engine, n. (Mach.) A marine engine with two cylinders placed at right angles to the crank-shaft, and at a small distance apart, to give space

for the vibration of the rod connecting the crank to the long end of a shaped cross-head, which slides in grooves between the cylinders; the upper ends of the cross-head are connected to the piston-rods.

Doub'-le-dag'-ger, n. (Printing.) A character marked thus ‡, used as a reference to notes in the margin of the page.

Doub'-le-dealer, n. One who practises double-dealing; a trickster; a deceiver.

Doub'-le-dealing, n. Deceitful practice; the profession of one thing, and the practice of another; duplicity; dissimulation; cunning; deceit; deception; fraud; trickery.

Doub'-le Decomposi'tion, n. (Chem.) See DECOMPOSITION.

Doub'-le-dye, v. n. To dye a second time.

Doub'-le-ea'-gle, n. A gold coin of the U. States, of the value of 20 dollars or units. It is twice the value of the Eagle, *q. v.*, and is a legal tender to any amount. Its first issue was made in 1849; and it is the largest coin in the U. States. It is of greater value than any now issued in any other country.

Doub'-le-ending, n. (Mus.) When, at the end of a strain, two or more dots, a double bar, and several notes are placed, with a figure 1 over the first and a figure 2 over the second part, it is thus called. It signifies that certain measures are to be repeated, and the part under figure 1 to be sung or played the first time, and that under figure 2 the second. Should the parts 1 and 2 be connected by a tie, both are to be repeated the second time.

Doub'-le-entendre, (doo'bl'ēng-tōng'd.) n. [From the Fr. *double entente*, double meaning.] A word or sentence conveying a double, and often indelicate meaning.

Doub'-le-entry, n. (Book-keeping.) See BOOK-KEEPING, ENTRY.

Doub'-le-cyed, (dub'l'id,) a. Having a crafty or deceitful face.

Doub'-le-face, n. Dissimulation; duplicity; acting of two parts.

Doub'-le-faced, a. Showing two faces; hypocritical; deceitful; as, a *double-faced* knave.

Doub'-le-first, n. In the English universities, a term applied to one who carries off the highest honors, both in the classics and mathematics.

Doub'-le-flat, n. (Mus.) A character compounded of two flats, signifying that the note before which it is placed is to be sung or played two semitones lower than its natural pitch.

Doub'-le-flower, n. (Bot.) See FLOWER.

Doub'-le-gilded, Doub'-le-gilt, a. Overlaid with a double coating of gold.

Doub'-le-handed, a. Having two hands; deceitful.

Doub'-le-headed, a. Bicipital; with two heads.

(Bot.) Having two flowers in one head.

Doub'-le-hearted, a. Having a false heart; treacherous.

Double Horn, in Texas, a post-office of Burnet co.

Doub'-le-leaded, a. (Printing.) Having two leads between each line.

Doub'-le-letter, n. (Printing.) Those types, such as the f, i, and l, which, when used in combination, are apt to be broken in locking up the form of types. They are therefore cast in one piece, or logotype, as ff, fi, ll, &c. The diphthongs æ and œ are also cast as double-letters.

Doub'-le-lock, v. a. To lock with two bolts.

Doub'-le-milled, a. Having been twice milled, in order to become superfine;—said of cloth; as, *double-milled* broadcloth.

Doub'-le-minded, a. Unsettled; wavering; undetermined.

Doub'-leness, n. State of being double or doubled.

Doub'-le-octave, n. (Mus.) An interval of two octaves, or fifteen notes in diatonic progression; a fifteenth.

Double Pipe Creek, in Maryland, a post-office of Carroll co.

Doub'-le-quick', n. (Mil.) The fastest time or step, in marching, next to the run, requiring 165 steps, each 35 inches in length, to be taken in one minute. The degree of swiftness may vary in urgent cases, and the number of steps be thus increased to 180 per minute.

—a. Performed in the time called double-quick; as, a *double-quick* march.

—v. a. and n. To move, or cause to move, in double-quick time.

Doub'-ler, n. The person who, or thing which, doubles.

Doub'-le-shade, v. a. To intensify the shade of a place or picture.

Doub'-le-sharp, n. (Mus.) A character designated by a cross, X, used to raise any note an interval of two tones. Neither double-flats nor double-sharps are ever placed at the head of a staff indicating the signature, but are only occasionally introduced in the course of a composition; for which reason no general staff signature is given to keys requiring more than seven sharps.

Doub'-le-shining, a. Shining with double lustre.

Doub'-le-shot'ting, n. (Naut.) When ships are engaged at close quarters, the guns are sometimes loaded with two, and even three, balls, when they are said to be *double- and treble-shot'ted*. By increasing the weight of metal to be discharged from the gun, its destructive power is considerably augmented at any short range.

Double Springs, in Mississippi, a post-office of Oktibbeha co.

Doub'-le-threaded, a. Formed of two threads twisted together.

Double-tongued, (dub'l-tung'd,) a. Deceitful; false; making contrary declarations concerning the same thing; as, "the *double-tongued* Tyrians."—Dryden.

Doub'-le-tonguing, n. (Mus.) A peculiar mode of

tonguing employed by flutists, which produces a more brilliant and spirited effect, combined with a greater facility of articulation, than the ordinary method. *D.* is effected by the action of the tongue against the roof of the mouth, this action being caused by articulating the word *tuttle* very distinctly, and at the same time accommodating such articulation with the corresponding notes.

Double Star, n. (Astron.) See STAR.

Doublet, (dub'let,) n. [Fr., from *double*.] Two; a pair; a brace; a couple.

(Costumes.) A close, tight-fitting garment (fig. 856), worn during the 16th and 17th centuries, and almost identical with the *jerkin*. The sleeves were sometimes separate, and tied on at the arms, and the skirts reached a little below the girdle.

(Printing.) A word, phrase, or sentence, set up for the second time by oversight.

Double Shoal, in N. Carolina, a post-office of Cleveland co.

Double Springs, in Arkansas, a post-office of Beutson co.

Double Springs, in California, a town of Calaveras co., abt. 87 m. E.N.E. of San Francisco.

Doub'-lets, n. pl. Said of two dice, each of which, when thrown, presents the same number of spots on the face uppermost.

Doub'-le-vault, n. (Arch.) See VAULT.

Doubling, (dub'ling,) n. Act of making double.—fold; a plait.—An artifice; a shift.—Act of sailing round a cape, promontory, &c.—Winding and turning of an animal to deceive hounds.—The layer of slates the eaves of a house.

—pl. (Her.) The linings of robes or mantles, or of the mantlings of achievement.—See MANTLING.

Doub'-ling-nail, n. (Ship-building.) A nail used in the doubling or lining of the gun-ports in a man-of-war.

Doubloon', n. [Fr. *doublon*; Sp. *dublone*; Port. *dobla*.] A gold piece coined in Spain. The *D.* of Isabella, coined since 1548, is of 100 reals, and equivalent to \$5.16. Older Spanish *D.* vary in value from \$17 to \$16.20.

Doubly, (dub'ly,) adv. In twice the quantity; to twice the degree.

"His right hand doubly to his left succeeds."—Dryden.

Doubs, (doobs,) a dep. of France, on the Eastern frontier separated from Switzerland by the Jura Mountains, situated in Lat. 46° 35', 47° 31' N., and Lon. 5° 42', 7° 4' E. Area, 2,018 sq. miles. *D.* is traversed by the riv. Doubs, a tributary of the Saone, and is separated on the N.W. from the dep. of Haute Saone by the Ognon, a tributary of the Saone. The surface is mountainous but fertile in many parts, with excellent pasturage; a valuable breed of draught-horses which it possesses. The chief towns, after Besançon, its capital, are Bann les-Dames, Montbeliard, and Pontarlier. *Pop.* 298,000.

Doubt, (dout,) v. n. [Fr. *douter*; Lat. *dubito*, from *bius*, moving alternately in two opposite directions *duo*, two, and obs. *bito*, to go; also *bēto*, perhaps from same root as *rado*, to go.] To waver in opinion or judgment; to be uncertain, or in suspense; to be undetermined; to fluctuate in belief; to hesitate; to demur to question.—To fear; to be apprehensive of ill; suspect; to have suspicion; as, to *doubt* a man's honesty.

—v. a. To hold in debt; to consider questionable; to be uncertain; to question; to withhold assent from; hesitate to believe; as, I *doubt* his story.—To fear; suspect; to apprehend ill of; to withhold confidence from.

"More than you doubt the change."—Shaks.

—n. [O. Fr. *doubte*; Fr. *doute*; Lat. *dubitatio*.] A wavering in opinion or judgment; a being uncertain; a fluctuation of mind respecting truth or propriety; uncertainty of disposition; suspense; unsettled state of opinion.

"Our doubts are traitors, and make us lose, . . . the good we might win."—Shaks.

—Uncertainty of condition.

"I am bound in to saucy doubts."—Shaks.

—Suspicion; fear; apprehension.—Difficulty urged in objection.

(Phil.) That state of mind in which we hesitate to two contradictory conclusions, having no preponderance of evidence in favor of either. Philosophers distinguish two kinds of doubt,—*provisional* and *definitive*. Provisional doubt is a voluntary suspension of our judgment for a time, in order to come to a more clear and sure conclusion. Definitive doubt is scepticism. A doubt through blindness, or passion, or malice; through fancy, or from a wish to doubt; but we doubt also from prudence and from mistrust, from wisdom and through penetration of mind. A preliminary doubt is the fundamental condition of philosophy. We begin, in order that we may not end with doubt. This was first established as a rule in philosophic inquiry by Descartes who tells us that he began by doubting everything, discharging his mind of all preconceived ideas, and admitting none as clear and true until he had subjected them to a rigorous examination.

Doubtable, a. That may be doubted; questionable.

Doubt'er, n. One who doubts; one who has scruples; one who is uncertain.

Fig. 856. — DOUBLET.

Stephen Arnold Douglas

1813-1861

Doubt'ful, *a.* Full of doubt or doubts; dubious; not settled in opinion; wavering; hesitating; undetermined; not clear in its meaning; uncertain: as, a *doubtful* case. — Equivocal; obscure; ambiguous; admitting of doubt; not obvious, clear, or certain; not decided; as, a *doubtful* explanation. — Of uncertain issue; not secure; hazardous; precarious; as, a *doubtful* event. — Not without fear; indicating doubt.

"Contending, and doubtful what might fall." — *Milton*.

Doubt'fully, *adv.* Dubiously; questionably; in a doubtful manner.

Doubt'fulness, *n.* A state of doubt, or uncertainty of mind; dubiousness; suspense; instability of opinion. — Ambiguity; uncertainty of meaning. — Uncertainty of condition, event, or issue; precariousness.

Doubt'ingly, *adv.* Dubiously; in a doubting manner.

Doubt'less, *a.* Without doubt or uncertainty; unquestionably.

Doubt'lessly, *adv.* Unquestionably.

Doue, *n.* (*Zoöl.*) A species of monkey, *Simia nemaus*, native of Cochín China, and remarkable for the brilliancy of its variegated colors.

Douee, a mountain in Ireland, co. Wicklow, 6 m. from Bray. Height abt. 2,384 ft.

Doucet, Doo'cet, *n.* One of the testicles of a stag.

Douceur, (*doo-sér*), *n.* [Fr., from *doux*, sweet; Lat. *dulcis*. See *DULCET*.] A present, gift, or honorarium; a bribe. — Sprightliness or agreeableness of manner.

Douche, (*doo-sh*), *n.* [Fr., from Lat. *duco*, to conduct.] A jet of water directed with some degree of force on to some diseased part of the body, with a view to strengthen it.

Doucine, (*doo'sén*), *n.* [Fr.] (*Arch.*) A moulding, concave above and convex below.

Doud Station, in Iowa, a post-office of Van Buren co.

Dough, (*dó*), *n.* [A. S. *dah*, from *deavian*, to wet; Icel. *drig*, dough.] A mass composed of flour or meal moistened and kneaded, but not baked; paste or sponge of bread.

Dough-baked, *a.* Improperly baked; — hence, unfinished; not brought to perfection; also, implying the being of dull, or half-witted understanding. (In the latter sense, the term *half-baked* is often used.)

Dougherty, (*dó'ir-té*), in Georgia, a S. W. co. Area, abt. 390 sq. m. River, Flint River. Surface, nearly level. Soil, fertile. Cap. Albany. Pop. (1890) 12,206.

Dougherty, in California, a post-village of Alameda co., about 18 m. S. E. of Leandro.

Dough-face, *n.* A person who is pliable and easily impressionable. (Used in the U. States.)

Dough-faced, *a.* Cowardly; weak; pliable; easily moulded or managed.

Dough-faceism, *n.* [Amer.] State of being reprehensively weak, pliant, or cowardly.

Doughiness, *n.* State of being doughy or spongy.

Dough-kneaded, *a.* Soft; flaccid; pliant like dough.

Doughnut, *n.* (*Cookery*.) A small spongy cake, compounded of milk, eggs, sugar, and flour, and fried in lard or butter.

Dough'tily, *adv.* With doughtiness.

Doughtiness, (*dout'ti-ness*), *n.* Quality of being doughty; bravery; obstinate courage.

Doughty, (*dout'ti*), *a.* [A. S. *doldig*, from *dugan*, to be of force or power; *D. dugen*, to be good; Scot. *dove*, to profit.] Noble; stout-hearted; brave; valiant; as, a *doughty* hero.

Doughty's Fork, in Ohio, a branch of Killbuck Creek, which it joins in Coshocton co.

Doughy, (*dó'e*), *a.* Like dough; soft; pliable; as, an "unbaked and doughy youth." — *Shaks*.

Douglas, (*dú'glas*), the name of an ancient and illustrious Scottish family, whose origin has not been accurately ascertained. The earliest mentioned in history are: WILLIAM the Hardy, d. 1302. — The good Sir JAMES, a companion in arms of Robert Bruce, killed in battle with the Moors, 1331. — WILLIAM, a natural son of the preceding, called *England's scourge* and *Scotland's bulwark*, killed 1353. — ARCHIBALD, brother of Sir James, regent in 1333. — WILLIAM, Lord of Liddesdale, the flower of chivalry in the 14th century. — After these the following are mentioned under the title of earls: — 1. WILLIAM, distinguished at the battle of Poitiers, d. 1384. — 2. JAMES, his son, killed at the battle of Otterburn, 1388. — 3. ARCHIBALD, surnamed the Grim, date unknown. — 4. ARCHIBALD, born 1374, celebrated for a victory over the Earl of March and Henry Percy, 1401; killed at the battle of Verneuil, 1424. — 5. ARCHIBALD, ambassador to England for the release of James I., 1437. — 6. WILLIAM, treacherously murdered at a banquet in the castle at Edinburgh the same year. — 7. Unknown. — 8. WILLIAM, the most imperious and powerful of the line, stabbed by James II. at Stirling, 1452. — 9. JAMES, brother of the preceding, and last earl of Douglas, taken prisoner after vainly attempting to revenge his brother's death, and dying in a monastery, 1488. — A younger branch of the same family are distinguished as *earls of Angus*. The best known of these are: — GEORGE, married to the daughter of king Robert III., 1397, and ARCHIBALD, called the "Great" Earl of Angus, distinguished at the battle of Torwood, father of GAWIN, bishop of Dunkeld, and of the two Douglases killed at Flodden, died 1513. The younger branch of the Angus family claims JAMES DOUGLAS, the celebrated Earl of Morton, and regent of Scotland, *q. v.*

Douglas, GAWIN, or GAVIN, a Scotch poet, b. at Brechin, 1475; was the younger son of the 5th Earl of Angus, and was bishop of Dunkeld. His *Palace of Honor* is his principal original work. His translation of the *Æneid* was the first made of a classic author into the English language. D. 1522.

Douglas, STEPHEN ARNOLD, an American statesman, b. in Vermont, 1813. He was at an early period of life

apprenticed to the trade of cabinet-making, which he was compelled eventually to abandon, through ill-health. He afterwards studied law at Canandaigua, N. Y., and, in 1833, went West, settling at Jacksonville, Ill. There he soon established himself in good practice as a lawyer, and before he had attained the age of 22, was elected Attorney-General of the State. In 1840, *D.* was appointed Secretary of State for Ill., and, in 1841, a judge of the Supreme Court. In 1843, *D.* entered Congress on the Democratic ticket. In the House of Representatives, *D.* was conspicuous for his national views on the Oregon boundary question, and by his strong advocacy of the annexation of Texas. In 1853-4, *D.* became noted as the author of the celebrated bill for organizing the territories of Kansas and Nebraska, which brought about a revolution in political parties in the U. States. In this bill, the oous which *D.* caused to attach to himself, rested on the provision it contained for repealing the Missouri Compromise, which he insisted was inconsistent with Congressional non-intervention with slavery in states and territories. In 1852, he was an unsuccessful candidate for the Democratic presidential nomination, and, again, in 1856. In 1860, as candidate of the northern Democrats for president, he received 1,300,000 votes, but only 12 in the electoral college. D. 1861. After his death, a magnificent monument was commenced to the memory of *D.* at Chicago, (see fig. 582).

Douglas, a seaport-town of England, cap. of the Isle of Man, 80 m. N. W. of Liverpool. Lat. 55° 15' N., Lon. 4° 25' 47" W. Pop. 12,511.

Douglas, a village of British Columbia, at the N. W. extremity of Harrison Lake, about 54 m. N. E. of New Westminster.

Douglas, in California, a township of San Joaquin co.

Douglas, in Colorado, a N. E. co., bordering on Kansas. Area, 840 sq. m. Rivers, S. Fork of Platte river, Republican Fork of Kansas river, and Bijou and Beaver creeks. Surface, in the W., mountainous; in the E., a sterile plain. Min. Gold. Cap. Castle Rock. Pop. (1890) 3,006.

Douglas, in Georgia, a N. W. co.; area, 178 sq. m. Cap. Douglasville. Pop. (1890) 7,794. — A village, capital of Coffee co., about 130 m. W. S. W. of Savannah.

Douglas, in Illinois, an E. co. Area, 410 sq. m. Rivers, Embarras and Kaskaskia. Surface, level. Soil, fertile. Cap. Tuscola. Pop. (1890) 17,669.

— A township of Clark co.

— A township of Iroquois co.

— A post-office of Knox co.

— A village of Pike co., on the Mississippi river, opposite Hannibal.

Douglas, in Iowa, a flourishing township of Appanoose county.

— A township of Bremer co.

— A village of Fayette co., abt. 5 m. N. W. of West Union.

— A township of Montgomery co.

— A township of Polk co.

— A township of Webster co.

Douglas, in Kansas, an E. co. Area, 469 sq. m. Rivers, Kansas and Wakarusa. Surface, diversified. Soil, very fertile. Min. Limestone. Cap. Lawrence. Pop. (1895) 23,587.

— A village of Douglas co., on the Kansas river, above Lawrence.

— A township of Jackson co.

Douglas, in Louisiana, a post-office of Lincoln parish.

Douglas, in Massachusetts, a post-town and township of Worcester co., 16 m. S. of Worcester, and about 40 m. S. W. of Boston. — *East Douglas*, in the same township, is a thriving manufacturing village.

Douglas, in Michigan, a post-office of Allegan co.

Douglas, in Minnesota, a W. co. Area, about 720 sq. m. Rivers, Long Prairie. Surface, diversified. Soil, fertile. Cap. Alexandria. Pop. (1895) 16,942.

— A township of Dakota co.

— A village of Polk co., on Red Lake river.

Douglas, in Missouri, a S. co. Area, about 792 sq. m. Rivers, N. Fork and Bryant's Fork of White river. Surface, generally hilly. Soil, productive. Min. Lead. Cap. Ava. Pop. (1890) 14,111.

Douglas, in N. Carolina, a P. O. of Rockingham co.

Douglas, in Nebraska, an E. co., bordering on Iowa. Area, about 330 sq. m. Rivers, Missouri, Platte, Elkhorn and Papillon. Surface, undulating. Soil, very fertile. Min. Limestone. Cap. Omaha. Pop. (1890) 158,008.

— A village of Cass co., about 37 m. S. W. of Omaha.

Douglas, in Nevada, a W. co., bordering on California. Area, 892 sq. m. Rivers, Carson. Lake Tahoe bounds it on the W. Surface, mountainous. Job's Peak, a granite mountain, rises to a height of 6,000 ft. Soil, not adapted to agriculture. Min. Gold and silver. Cap. Genoa. Pop. (1890) 1,551.

Douglas, in Oregon, a S. W. co., bordering on the Pacific Ocean. Area, about 4,875 sq. m. Rivers, Umpqua rivers and its N. and S. forks, and Siuslaw river. Surface, mountainous. Soil, in the valleys, very fertile. Min. Silver and copper. Cap. Roseburg. Pop. (1890) 11,864.

Douglas, in South Dakota, a S. S. E. co. Area, 450 sq. m. Agriculture the leading industry. Cap. Armour. Pop. (1895) 4,758.

Douglas, in Texas, a post-village of Nacogdoches co., about 240 m. N. E. of Austin.

Douglas, in Washington, an E. co. Area, 4,552 sq. m. Stock-raising on a large scale. Cap. Waterville. Pop. (1890) 3,161.

Douglas, in Wisconsin, a N. W. co., bordering on Minnesota. Area, about 1,336 sq. m. Rivers, St. Louis, St. Croix, Bois Brulé, and Aminicon. Lake Superior washes its N. border. Surface, hilly. Soil, generally fertile. Min. Copper. Cap. Superior. Pop. (1895) 29,986.

Douglas Center, in Wisconsin, a post-office of Marquette county.

Douglas City, in California, a post-township of Trinity co., on Trinity river, about 6 m. S. of Weaverville.

Douglas City, in Missouri, a village of Phelps co., abt. 6 m. E. N. E. of Rolla.

Douglas Flat, in California, a village of Calaveras co., near the Stanislaus River, abt. 10 m. N. of Sonora. Gold is found in the neighborhood.

Douglas Fort, near the confluence of the Assiniboin and Red rivers in British N. America.

Douglas Island, in Alaska, between Admiralty Island and the main land. Lat. 58° 15' N., Lon. 134° 24' W.

Douglasville, in Texas, a post-office of Cass co.

Douglasville, in Pennsylvania, a post-village of Berks co., abt. 64 m. E. of Harrisburg.

Doulens, or **Doullens**, a town of France, dep. Somme, on the Authie, 16 m. N. of Amiens. It has a citadel, and a trade in cotton-yarn and hempen cloths. Pop. 4,076.

Doulou'raey, *n.* [Gr. *doulos*, a slave, and *kratein*, to govern.] A government carried on by slaves.

Doum'-palm, *n.* (*Bot.*) See *DOOM-PALM*.

Dour, *a.* [Scot.] Hard; hardy; inflexible; obstinate; as, a "dour wife." — *C. Rouse*.

Dour, a town of Belgium, prov. Hainault, 9 m. W. S. W. of Mons. Coal and iron mines are worked in the vicinity. Pop. 7,000.

Dou'ra, *n.* (*Bot.*) Same as *DURAMEN*, *q. v.*

— A kind of millet. See *DURRA*.

Douro, (*dó'ro*), a large river of Spain, rising on the borders of Aragon, and, flowing W., traverses more than half the width of Spain, and the whole of Portugal. After a course of about 510 m., it falls into the Atlantic, 3 m. from Oporto. Its basin is the largest in the Spanish peninsula. The wine country of the Douro begins 50 m. to the E. of Oporto.

Douro, *DUERO*, a former prov. in the N. of Portugal, having the Atlantic on the W. and now absorbed in the provs. Minho, Upper Beira, and Estremadura. Area, 3,572 sq. m. Pop. 244,560.

Dou'ro, (*Pu'to*), an island in the Indian Archipelago, 35 m. from Timor, in Lat. 10° 48' S., Lon. 122° 41' E.; it is barren. Pop. 5,000.

Douse, *v. a.* [Gr. *duō*, *dusō*.] To souse, dip, or plunge into water.

(*Naut.*) To slacken suddenly; to let go in haste; as, to *douse* the jib. — To put out; to extinguish; as, to *douse* the glim; i. e., put out the light. (Used by sailors.) — *v. n.* To fall suddenly into water.

"To swing i' the air, or douse in water." — *Hudibras*.

Dousing-check, *n.* (*Ship-building*.) See *DOWSING-CHECKS*.

Dons'man, in Wisconsin, a post-office of Waukesha co.

Douzeave, (*dó'z'év*), *n.* [Fr. *douze*, twelve.] (*Mus.*) A scale of twelve degrees.

Dove, *n.* [A. S. *duna*; D. *duip*; Dan. *due*; Icel. *dúfa*.] (*Zoöl.*) A bird of the family of the *Columbidae*. No distinction between the terms dove and pigeon is sanctioned either by constant scientific or general popular use. Audubon attempts to make a distinction, giving the name *pigeon* to those species of which many nests are built close together on the same trees, and *dove* to those which are solitary in their nidification; but this distinction has not been generally admitted. — See *PIGEON*.

— A word of endearment, or an emblem of innocence.

Dove, a river of England, falling into the Trent below Burton; noted for the fine scenery on its banks.

Dove, *n.* (*Christian Art.*) The Holy Ghost having descended upon Christ at his baptism in the form of a dove, that bird is generally employed as a symbol of the Spirit in religious art. It is also used as an emblem of peace, when it bears an olive-branch in its mouth, doubtless referring to the return of the dove to the ark. When used as an emblem of purity by the ancient painters, it was usually represented white, with red claws and beak, and sometimes with a golden nimbus around the head. Dying saints and martyrs are frequently represented with a dove flying from their mouths; in these cases it is a symbol of the soul purified by suffering. In some stained windows, the seven gifts of the Holy Spirit are symbolized by a dove, from which proceed seven rays, terminating in seven stars. When used as a symbol of the Church of Christ, the dove is represented with six wings. — two at the head, two at the shoulders, and two at the feet.

Dove-cot, **Dove-cote**, **Dove-house**, (*dúv'kót*), *n.* A pigeon-house; a columbarium.

Dove Dale, one of the most beautiful spots in England, and the most romantic locality in the picturesque county of Derby, where the river Dove runs for a considerable distance in a natural chasm between two precipitous walls of rocky slate.

Dove-eyed, (*dúv'id*), *a.* Soft-eyed; meek-eyed; having eyes like a dove.

Dovekie, (*dúv'ke*), *n.* (*Zoöl.*) See *MERGULLES*.

Dove'let, *n.* A young or small dove.

Dover, (*Strait of*), [Lat. *Fretum Gallicum*; Fr. *Pas de Calais*.] The narrow sea-channel between England and France, and connecting the English Channel and North Sea. It is 18 to 25 m. broad, average 22; and 6 to 29 fathoms deep, but on Warne and Ridge Shoals only 1½ to 4 fathoms. The English side of the strait consists of chalk cliffs 300 to 600 ft. high, succeeded on the south by lower greensand. The tides of the English Channel and North Sea meet in Dover Strait. In 1875 an international joint-stock company was organized to connect France and England by a tunnel under these straits, but work was afterward permanently discontinued by order of the British government.

Do'ver, a seaport-town of England, on Dover Strait, 66 m. E.S.E. of London, at the nearest point of Britain to the continent of Europe, being 21 m. from Cape

Fig. 857. — DOVER CASTLE.

Grisnez, and 25½ N.W. of Calais. D. is the chief port of communication between England and France. Its principal feature is its castle, perched on a cliff about 320 feet above sea-level, which, with its immense defences, renders it one of the strongest, as it is certainly one of the most important, fortresses in the British islands. Pop. (1891) 33,300.

Do'ver, in *Alabama*, a village of Russell co., abt. 75 m. E. by N. of Montgomery.

Dover, in *Arkansas*, a township of Pope co., near Illinois Bayou, about 90 m. N.W. of Little Rock.

Dover, in *Delaware*, seat of justice of Kent co., and cap. of the State of Delaware, situated on Jones Creek, about 50 m. S. of Wilmington, and about 5 m. W. of Delaware Bay. Lat. 39° 10' N., Lon. 75° 30' W. It has a fine state-house, besides many other superior buildings. It is the centre of an extensive fruit-canning trade.

Dover, in *Georgia*, a village of Greene co., about 41 m. N. of Milledgeville.

—A township of Terrell co.

Dover, in *Illinois*, a post-village and township of Bureau co., about 144 m. N. of Springfield.

Dover, in *Indiana*, a village of Boone co.

—A village of Dearborn co., about 90 m. S.E. of Indianapolis.

Dover, in *Iowa*, a village of Davis co., on Fox river, about 80 m. S.S.W. of Iowa City.

—A township of Fayette co.

—A post-office of Lee co.

Dover, in *Kansas*, a post-office of Shawnee co.

Dover, in *Kentucky*, a post-village and township of Mason co., on the Ohio river, about 11 m. below Maysville.

Dover, in *Maine*, a post-town, cap. of Piscataquis co., on the Piscataquis river, about 70 m. N.E. of Augusta. Pop. of twp. (1897) about 2,050.

Dover, in *Massachusetts*, a post-town of Norfolk co., on Charles river, about 15 m. S.W. of Boston.

Dover, in *Michigan*, a township of Lenawee co., about 7 m. W. of Adrian.

—A village of Washtenaw co., on Huron river, about 54 m. W. by N. of Detroit.

Dover, in *Minnesota*, a post-township of Olmstead county.

Dover, in *Missouri*, a post-village and township of Lafayette county, about 108 miles west of Jefferson City.

Dover, in *North Carolina*, a post-office of Craven county.

Dover, in *New Hampshire*, a city, capital of Strafford co., on the Cocheco river, about 68 m. N. of Boston. Lat. 43° 13' N., Lon. 70° 54' W. The oldest town in the State, having been settled in 1623. *Manuf.* Cottons, boots, oil cloths, &c. Pop. (1897) about 13,200.

Dover, in *New Jersey*, a thriving town of Morris co., about 7 m. N.N.W. of Morristown, on the Rockaway river. Pop. (1897) about 5,200.

—A township of Ocean co.

Dover, or **DOVER PLAINS**, in *New York*, a post-village of Dover township, Dutchess co., about 80 m. N.N.E. of New York city.

Dover, in *New York*, a township of Dutchess co., about 20 m. E. of Poughkeepsie.

Dover, in *Ohio*, a township of Athens co.

—A post-village of Cuyahoga co., on Lake Erie, about 14 m. W.S.W. of Cleveland.

—A township of Fulton co.

—A village of Fulton co., about 35 m. W. of Toledo.

—A village and township of Tuscarawas co., on the Tuscarawas River, about 103 miles E.N.E. of the city of Columbus.

—A township of Union co.

Dover, in *Pennsylvania*, a post-village and township of York county, on Couewago Creek, about 7 m. N.W. of York.

Dover, in *Tennessee*, a township and village, cap. of Stewart co., on the Cumberland River, about 75 m. W. by N. of Nashville.

Dover, in *Vermont*, a post-town and township of Windham county, about 90 miles S. by W. of Montpelier.

Dover, in *Wisconsin*, a village of Iowa co., about 27 m. N.W. of Madison.

Dover, in *Wisconsin*, a village and township of Racine co., about 21 m. W. of Racine.

—A village of Walworth county, about 48 miles S.W. of Milwaukee.

Dover Furnace, in *New York*, a P.O. of Dutchess co.

Dover Hill, in *Indiana*, a post-village, cap. of Martin co., on the E. Fork of White River, about 92 m. S.S.W. of Indianapolis.

Dover Mills, in *Virginia*, a post-village of Goochland co., on Dover Creek, about 21 m. W. of Richmond.

Dover Mines, in *Virginia*, a P. O. of Goochland co.

Dover South Mills, in *Maine*, a post-office of Piscataquis co.

Dover's Powder, *n.* [From *Dover*, the inventor.] (*Med.*) A compound of ipecacuanha, opium, and sulphate of potash. It is the *pulvis ipecacuanhae compositus* of the Pharmacopœia. Ten grains, which is the average dose, contain one grain of opium and one of ipecacuanha. It is an excellent sedative and sudorific.

Dove's Creek, in *Georgia*, a village of Elbert co.

Dove's Depot, in *South Carolina*, a village of Darlington county.

Dove'tail, *n.* [From its spreading like a pigeon's tail.] (*Carp.*) A joint used by carpenters

and joiners in connecting two pieces of wood, by letting one into the other, in the form of the expanded tail of a dove. It is the strongest method of joining masses, because the tenon or piece of wood widens as it extends, so that it cannot be drawn out, the tongue being larger than the cavity through which it would have to be drawn. The French call this method *queue d'hirondelle*, or swallow's-tail.

—*v. a.* To unite by a tenon.

—To make to fit; to adjust firmly and connectedly; as, our opinions *dove'tail* together.

Dove'tailing, *n.* (*Carp.*) A method of joining by dove-tails.

Dove'tail-joint, *n.* (*Anat.*) A suture, or serrated articulation, as of the bones of the skull.

Dove'tail-moulding, *n.* (*Arch.*) A Gothic architectural ornament in the form of dove-tails.

Dow, *or Dow*, *n.* (*Naut.*) Same as *BAGGALA*, *q. v.*

Dow, or **Douw**, GERARD, an eminent Dutch painter, and the pupil of Rembrandt, b. at Leyden, 1613. For the excellence of his coloring, delicacy of finish, and attention to the minutiae of his art, this master's compositions are unrivalled; and the prices which some of his paintings have obtained are almost without parallel. D. 1680.

Dow'able, *a.* That may be dowered or endowed; entitled to dower.

Dowager, (*dou'a-jär*), *n.* [Fr. *douairière*, from *douaire*, a dower.] A widow endowed; that is, who either enjoys a dower from her deceased husband, or has property of her own brought by her to her husband on marriage (dowry), and settled on herself after his decease. In the English and French language of etiquette, the term is applied to a widow lady, to distinguish her from the wife of her husband's heir, having the same title.

Dowag'iae, in *Michigan*, a small river, rises in Cass co., and joins the St. Joseph River near Niles.

—A city of Cass co., on Dowagiac river, about 179 m. W. of Detroit. Pop. (1897) about 2,050.

Dow'cet, *n.* See *DOTSET*.

Dow'dallville, in *Illinois*, a hamlet of Peoria co.

Dow'dy, *n.* [Scot. *dawdie*, probably from *daw*, listless, inactive, or from its root.] An ill-dressed, vulgar, inelegant woman.

"They doat on *dowdies* and deformity." — *Dryden*.

—*a.* Awkward; ill-dressed; inelegant; having a vulgar appearance.

"No housewifery the *dowdy* creature knew." — *Gay*.

Dow'dyish, *a.* Resembling a dowdy.

Dow'el, *v. a.* [Ger. *döbel*, a peg, a plug.] To connect or fasten together by dowels; as, to *dowel* the head of a cask.

—*n.* A pin of wood or iron used in joining together pieces of timber, or for connecting the joints of boards, the ends of the felloes of wheels, &c. Fig. 859 represents a barrel-end in three pieces, joined by dowels.

Dow'el-joint, *n.* (*Joinery*.) A joint made by means of dowels.

Dow'el-pin, *n.* See *DOWEL*. Fig. 859 — DOWEL-JOINTS.

Dow'er, *or Dow'ery*, *n.* [Fr. *douaire*; L. Lat. *dotarium*, *doarium*, from *dos*; Gr. *dōs*, from *didōmi*, to give.] Anything given; a gift; an endowment.

"How great, how plentiful, how rich a *dower*." — *Davies*.

(*Law*.) The estate for life which a widow acquires in a certain portion of her husband's real property after his death. *D.*, by the common law, which in this matter is the general law in the U. States, entitles the widow to a third part of all the lands and tenements of which the husband was seized in fee-simple or fee-tail, at any time during the coverture. But the rule varies so widely on many particulars in the different States, that we must refer the inquirer to the local statutes on the matter.

Dowered, (*dow'erd*), *a.* Having a dower or a portion.

"*Dower'd* with our curse . . . take her, or leave her." — *Shaks*.

Fig. 858. — DOVETAIL.

Dow'erless, *a.* Destitute of dower; without a fortune, unportioned; as, a *dowerless* bride.

Dow'ery, *n.* See *DOWER*.

Dowl, *Dowle*, *n.* Feathery or wool-like down.

Dow'las, *n.* A kind of coarse linen cloth, which was generally used for shirts by the working-people before the introduction of calico.

Dowlatabad, (*dou-lat-a-bad'*), a city and fortress of Hindostan, in the Deccan, 7 m. from Aurungabad, in Lat. 19° 52' N., Lon. 76° 2' E. The fort stands on a rock 500 feet high.

Down, *n.* [Ger. *dune*; Dan. *duun*; Icel. *dún*, from Teut. *dunen*, to swell; Fr. *duvet*.] The fine, soft feathers of fowls, particularly of the duck kind.—The fine hair that appears on the face in adolescence.

"On thy chin the springing beard began

To spread a doubtful *down*, and promise man." — *Prior*.

—The pubescence of plants; the pappus or little crown of certain seeds of plants; as, the *down* of a thistle.—Any thing that soothes or mollifies.

"Thou bosom softness! *down* of all my cares." — *Southern*.

—*v. a.* To cover or line with down.

Down, *n.* [A. S. *dun*; Ger. *düne*; Gael. *dun*; Fr. *dune*. Gr. *thin* or *thís*, gen. *thínos*. The root is found in L. *Sax dunen*, to swell up.] A bank or rounded elevation of sand formed by the action of the wind on or near a sea shore, generally used in the plural; as, the *downs* of Sussex.—A tract of poor, naked, hilly land, used only for the pasturage of sheep, &c.

—*pl.* State of declension, abasement, depression, or failure; used colloquially; as, the ups and *downs* of life.

—*pl.* A roadstead, and naval rendezvous, off the coast of Kent, in the English Channel.

"All in the *Downs* the fleet was moor'd." — *Gay*.

Down, *prep.* [A. S. *adán*, *adáne*, of *dáne* — *a*, from, *adun*, a hill. See *DOWN*.] Along a descent; from a higher to a lower place; as, to go *down* a mountain.—Toward the mouth of a river, or toward the embouchure of an volume of water; as, to sail *down* a stream.

—*adv.* Along a descent; tending from a higher to a lower place; as, *down* a well.—On the ground, or at the bottom; below the horizon; as, the sun goes *down*.—From a higher to a lower condition; into disrepute or disgrace; into subjection; as, an author writes himself *down*.

"It has still been preached up, but acted *down*." — *South*.

—From a greater to a less bulk; into due consistence; as, to boil *down* fat.—At length; prostrate; in a low position, state, or condition.

"*Down* sinks the giant with a thundering sound." — *Pope*.

—In a state of dejection, poverty, misery, or abasement; as, he is *down* in the world.—By descent from antiquity; as, *down* to the present day.

Down in the mouth, dejected; out of spirits. (Collo and vulgar.) — *Down with*, thrust down; hurl down; put down; —used in peremptoriness; as, "*down with them all*." (*Shaks*.) — *Up and down*, hither and thither to and fro; with rising and falling motion.

—*interj.* Exhorting to abasement or destruction.

"*Down* to the dust with them, slaves as they are!" — *Moore*.

—*v. a.* To cover with down; to make downy.

Down, *a.* Downcast; dispirited; dejected.

—Downright; absolute; positive; flat; conclusive, as, *down* assertion.—Downward; as, a *down* railroad-trail—in opposition to up.

Down, a county of Ireland, bounded N. by co. Antrim E. and S. by the Irish Sea, and W. by co. Armagh. *Are* 957 sq. m. The surface is generally mountainous, but fertile in many parts. The Mourne Mountains occupy portion of it, and rise to 2,796 ft. above the sea. *Rivers and Lakes.* The Bann Lagan and Newry rivs., and numerous small lakes, the chief of which is Lough Stranford. *Prod.* Oats, potatoes, flax, barley, and some wheat. *Min.* Copper and lead, black marble, slate, coal, freestone and crystals. *Manuf.* Linens, muslins, hosiery, leather, and salt. The fisheries are important. *Chief towns.* Newry Ballymacarret, Rosstrevor, and Downpatrick.

Down'-bear, *v. a.* To depress.

Down'-east, *a.* Cast downward; dejected; bent down directed to the ground.

"The downcast look of modesty." — *Sir P. Sidney*.

Down'-east, *n.* (*Mining*.) A ventilating shaft for promoting the circulation of air through a mine. Mines are generally provided with two shafts for ventilation, under one of which (the *up-cast* shaft) a fire is maintained to produce the upward current, which carries off the foul air, whilst the fresh air descends by the other (*down-cast* shaft). The current of fresh air is forced by wooden partitions to divide itself, and pass through every portion of the workings. The operation of such provisions for ventilation is easily exhibited. A tall jar (Fig. 860) is fitted with a ring of cork, carrying a wide glass chimney (A). If this be placed over a taper standing in a plate of water, the accumulation of vitiated air will soon extinguish the taper; but if a second chimney (B), supported in a wire ring, be placed within the wide chimney, fresh air will enter through the interval between

Fig. 860.

the two, and the smoke from a piece of brown paper will demonstrate the existence of the two currents, as shown by the arrows. — A small box (Fig. 861) is provided with a glass chimney at each end. In one of these (B), representing the up-cast shaft, a lighted taper is suspended. A piece of smoking brown paper may be held in each chimney to show the direction of the current. On closing A with a glass plate, the taper in B will be extinguished, the entrance of fresh air being prevented. By breathing gently into A, the taper will also be extinguished. The experiment may be varied by pouring carbonic acid and oxygen alternately into A, when the taper will be extinguished and rekindled by turns.

Fig. 861.

own'castling, *a.* Dispiriting; dejecting.
own-come, (*down'kum.*) *n.* A downfall; as, a down-come in life.
own-draught, (*down'draft.*) *n.* (*Mining.*) Same as DOWN-CAST, *q. v.*

owne, in *New Jersey*, a township of Cumberland county.

owner's Grove, in *Illinois*, a post-township of Du Page co., abt. 24 m. W.S.W. of Chicago.

ownes, JOHN, an American naval officer, b. in Mass., 1786. He entered the U. S. navy as a midshipman in 1802, and distinguished himself in the operations before Tripoli in the following year. D., during the war of 1812, and in the expedition against Algiers in 1815, won still further reputation as a skilful and dashing officer. In 1832-4 he commanded the Pacific squadron, and in this capacity avenged an outrage committed on an American merchantman, by storming Quallah Bartoo, in the Island of Sumatra. D. 1855.

owney, in *Iowa*, a post-office of Cedar co.
own'fall, *n.* A falling down, or body of things falling; a sudden fall or ruin by violence, in distinction from slow decay or declension.

"Each downfall of a flood the mountains pour." — *Dryden.*
A sudden fall from a high or prominent position; a depression or ruin of reputation or estate.

"Dar'st thou divine (King Richard's) downfall." — *Shaks.*

ownfallen, (*down'fáln.*) *a.* Fallen; ruined; as, downfallen cliffs.

ownhaul, (*down'hall.*) *n.* (*Naut.*) A rope used on shipboard for hauling down a sail.

ownhearted, *a.* Depressed in spirits; dejected; melancholy; rejecting hope.

ownhill, *a.* Declivous; descending; sloping; — hence, figuratively, easy.

"The first steps a downhill greensward fields." — *Congreve.*
a. Declivity; slope; descent.

own Hill, in *Indiana*, a hamlet of Crawford co.

ownieville, in *California*, a post-village, cap. of Sierra co., on Yuba river, near its source. Pop. 800.

ownieville Butte, in *California*, a mountain peak of Sierra co., about 12 m. E.N.E. of Downieville. It is said to be 8,800 feet high. Gold is found on its slopes.

owniness, *n.* State of being downy.

own'ing, ANDREW JACKSON, an eminent American landscape-gardeuer, b. at Newburg, New York, 1815. In early life he assisted his father in the prosecution of his business as a nurseryman, and soon rendered himself amiliar with the arts of gardening and horticulture, he science of botany, &c. In 1841, D. published his well-known *Treatise on the Theory and Practice of Landscape Gardening*. This work obtained great popularity, and elicited encomiums from such great English authorities as London and Lindley. In succession appeared his *Cottage Residences*, *Fruits and Fruit-Trees of America* (which has run through 14 editions), *Architecture for Country Houses*, &c. D. was accidentally drowned, 1852.

own'ing's Mills, in *New Hampshire*, a former post-office of Strafford co.

own'ingsville, See DOWNINGVILLE.

own'ingsville, in *Kentucky*, a township of Grant co., about 10 miles W. of Williamstown.

own'ingtown, in *Pennsylvania*, a post-borough of Chester co., 33 miles W. of Philadelphia, on the E. branch of Brandywine creek. Pop. (1897) about 2,500.

own'ington, in *Ohio*, a post-village of Meigs co., about 40 m. S.W. of Marietta.

own'ingville, in *Ohio*, a village of Carroll co.

ownlooked, (*down'lookt.*) *a.* Having a dejected or sullen countenance.

"Downlook'd, and with a cuckoo on her list." — *Dryden.*

own'lyring, *a.* About to lie down, or be in travail of childbirth.

i. Time of repose; bed-time.

ownpat'rick, a town of Ireland, cap. county Down, prov. Ulster, near the Quoyle, 21 m. S. by E. of Belfast.

It is one of the most ancient towns in Ireland, existing in the days of St. Patrick, who died in 493, and is said to have founded the cathedral.

own'right, *adv.* Right down; straight down; perpendicularly; as, "a giant cleft downright." (*Hudibras.*)

— In plain terms; without ceremony, circumlocution, or equivocation; as, a downright piece of impudence.

— *a.* Directly to the point; plain; artless; blunt; unceremonious; — said of persons; as, "after his plain, downright way." (*Addison.*) — Open; undisguised; without reservation; absolute; — used in relation to things; as, a downright falsehood.

Down'rightness, *n.* State of being direct or plain; quality of being downright.

Down'share, *n.* (*Agric.*) A breast-plough used for cutting turf.

Down'sitting, *n.* Act of sitting down; rest; repose.

Down-stairs, *a.* Below-stairs; on a lower floor.

— *adv.* Down to the stairs, to a lower floor or basement.

"Why did you kick me down-stairs?" — *Kemble.*

Down'stroke, *n.* A stroke or blow directed downwards. — In penmanship, a thick, heavy stroke made with a downward inclination of the pen; — in contradistinction to the slight impression called up-stroke, *q. v.*

Down'train, *n.* A departing railroad train; a train proceeding from the chief terminus.

Down'trod, Down'trodden, *a.* Trodden, trampled, or crushed down; as, down-trodden people.

Down'ton, in England, a town of Wiltshire, on the Avon, 6 m. S.S.E. of Salisbury. Pop. 5,034.

Dowes'ville, in *New York*, a P. O. of Delaware co.

Dow's'ville, in *Wisconsin*, a village of Duun co., on the Menomonic River, about 7 m. S. of Menomonie.

Down'ward, Down'wards, *adv.* [*A.S. duneward.*] From a higher place to a lower; in a descending course; in a course or direction from a head, spring, origin, or source; as, to bend downward.

"Look downward on that globe." — *Milton.*

— In a course of lineal descent from an ancestor considered as a head.

"A ring . . . downward bath succeeded in his house, from son to son." — *Shaks.*

— In the course of falling or descending from elevation or distinction.

— *a.* Moving or extending from a higher to a lower place, as on a slope or declivity, or in the open air; tending toward the earth or its centre; declivous. — Descending from a head, origin, or source; as, a downward descent. — Tending to a lower state or condition; dejected; depressed; as, "downward thoughts." — *Sidney.*

Down'weed, *n.* (*Bot.*) See GRAPHALIUM.

Down'y, *a.* Covered with down or nap; covered with pubescence, or soft hairs, as a plant. — Made of down or soft feathers; resembling down; soft; calm; soothing; as, a downy pillow. — Acute; knowing; astute; sharp-witted; as, a downy fellow. (*Vulgar.*)

Dow'ral, *a.* Pertaining to a dowry; consisting of a dowry.

Dow'ress, *n.* A woman entitled to dower.

Dow'ry, *n.* [*See DOWER.*] A gift; a fortune given. (*Law.*) A word sometimes confounded with *dower*.

It was formerly applied to mean that which a woman brings to her husband.

Dowse, *v. a.* and *n.* See DOTSE.

Dowse, *n.* A blow or slap in the face. (*Vulgar.*)

Dows'er, Dows'ing-rod, *n.* (*Mining.*) A miner's divining-rod.

Dows'er, *n.* One who makes use of the divining-rod.

Dows'ing-cheeks, *n. pl.* (*Ship-building.*) Pieces fayed across the apron, and lapped on the knightheads or inside stuff above the upper deck.

Doxological, (*dox-o-loj'ik-al.*) *a.* Pertaining or relating to doxology; rendering praise to God.

Doxol'ogize, *v. a.* [*Gr. doxologeîn.*] To praise God with doxologies.

Doxology, *n.* [*Gr. doxologia*, praising, from *doxologêō*, to give glory to.] (*Eccl.*) A form of praise, or giving glory to God; as in the concluding paragraph of the Lord's Prayer, — "Thine is the kingdom, and the power, and the glory, for ever;" or the Hymn of the Angels (*Luke ii. 14.*) — "Glory to God in the highest, and on earth peace, good-will to all men." — Two hymns used in the early Christian church were known as the *greater* and *lesser D.* The greater *D.* was simply an expansion of the angelic hymn, and is now generally known by that name; it is sung in the Roman Catholic Church at the celebration of the Lord's Supper and at matins. The lesser *D.* is the ordinary *D.*, "Glory be to the Father, and to the Son," &c., repeated at the end of each psalm in the service of the Church of England.

Doxy, (*doks'y.*) *n.* A sweetheart or paramour.

"Orthodoxy is any doxy." — *Bishop Warburton.*

— A prostitute; a woman of loose morals; as, a sailor's doxy.

Doyle, RICHARD, (*doil.*) an English artist, b. in London, 1826. He inherited from his father, John Doyle, an able political caricaturist, a taste for humorous illustrations, and excels chiefly in depicting the passing whims and oddities of the day, and was for some time a constant illustrator of the pages of *Punch*. It was in that facetious periodical that he illustrated with great success, and in endless variety, *Ye Manners and Customs of ye English*, and produced many other sketches, discovering much originality of invention, as well as humorous appreciation. He afterwards produced *The Foreign Tour of Brown, Jones, and Robinson*, and other works. The last novel from the pen of Dickens is illustrated by this eminent artist. D. 1883.

Doyle, in *Kansas*, a township of Marion co.

Doyle, in *Iowa*, a township of Clark co.

Doyle'sburgh, in *Pennsylvania*, a post-office of Franklin co.

Doyle's Mills, in *Pennsylvania*, a P. O. of Juniata co.

Doyle's port, in *Missouri*, a village of Barton co.

Doyle's town, in *Ohio*, a village of Paulding co.

Doyle's town, in *Ohio*, a village of Wayne co., about 104 m. N.E. of Columbus.

Doylestown, in *Pennsylvania*, a post-borough and township, cap. of Bucks co., about 100 m. E. of Harrisburg.

Doylestown, in *Wisconsin*, a P. O. of Columbia co.

Doze, *v. n.* [*Dan. dūs, drowsiness, dūse, to doze, to mope; Icel. dasaz, to languish.*] To slumber; to sleep gently; to live in a state of drowsiness, to be dull or half asleep.

"Chiefless armies dozed out the campaign." — *Pope.*

— *r. a.* To pass or spend in drowsiness; as, to doze away one's time.

— *n.* A light sleep; a slumber; as, to take a doze.

Dozen, (*dūz'n.*) *a.* [*Fr. douzaine, from douze, twelve; Lat. duodecim.*] Two and ten; twelve in number; as, a dozen of gloves. — An indefinite number; as, a dozen or so.

Doz'enth, *a.* Twelfth. (*R.*)

Doz'er, *n.* One who slumbers or sleeps lightly.

Doz'iness, *n.* Drowsiness; heaviness; predisposition to sleep.

Dozy, *a.* [*See DOZE.*] Drowsy; heavy; inclined to sleep; sluggish; sleepy.

"The youth essays his dozy head to raise." — *Dryden.*

Drab, *n.* [*A. S. Fris. and D. drabbe, dregs, lees; Gael. drablag, a dirty woman.*] A low, sluttish, dirty woman; a harlot; a prostitute.

"Paltry and proud as drabs in Drury Lane." — *Pope.*

— A wooden box used for holding salt when taken out of the boiling pans, in salt-works.

Drab, *n.* [*Fr. drap. See DRAPE.*] A kind of thick woollen cloth, of a dull brown, or dull gray color, resembling fuller's earth. — A dull brownish or gray color.

— *a.* Of a dull, dun color, resembling the cloth of the same name; as, a drab sky.

Drab'a, *n.* [*Gr. drabe, acrid, biting; from the taste of the plant.*] (*Bot.*) A genus of plants, ord. *Brassicaceæ*. The genus embraces about 7 American species of little relative importance, the most common of which is *D. verna*, the Whitlow Grass, an annual early-flowering plant, found in grassy fields from Canada to Virginia.

Drab'ber, *n.* A wench; one who is intimate with loose women, or drabs.

Drab'bish, *a.* Having the qualities of a drab. — Resembling drab; as, a drabbish tint.

Drab'ble, *v. a.* To drabble; to besmirch; to wet and befoul by dragging through mud and water.

— *r. n.* To angle with a long line and rod; as, to drabble for barbel.

Drab'bler, *n.* (*Naut.*) A small topsail.

Drab'bletail, *n.* A draggletail; a sluttish, slatternly woman.

Drab'bling, *n.* Act or practice of angling for fish with a long rod and line.

Draecena, (*drai-se'na.*) *n.* [*Gr. drakaina, a female dragon, the inspissated juice becoming a powder like dragon's blood.*] (*Bot.*) A genus of plants, ord. *Liliacæ*. The most remarkable species is *D. draco*, the Dragon Tree of Teneriffe, which attains a great size, and, unlike the majority of endogenous trees, has forked

Fig. 862. — THE DRAGON-TREE.

(Dracaena draco.)

branches. This plant yields a red resin, resembling dragon's-blood, but it is not known in commerce. *D. terminalis*, the Ti-plant, a native of the Sandwich Islands, has starchy roots, which are baked and eaten by the islanders; its juice is used for making a fermented beverage, and its leaves are employed as fodder for cattle.

Dracanth, *n.* See TRACACANTH.

Drachm, Drachma, Dram, (*dram, drak'mă.*) *n.*

[*Gr. drachmē, from drassomai, to grasp or gripe.* Originally, a handful of oboli, or small coins.] A silver coin of ancient Greece, used as the unit of the money system. Since the year 1833 the unit of the money system of modern Greece has also been called drachma, and is equal to about 18 cents. Among the ancients the value of the *D.* varied at different times and places. The Attic *D.* was nearly equal to 20 cents. It differed according to the value of specie, but was always calculated as the 100th part of the *mina*, which was generally worth about \$20. There were also coins valued at two, three, and four *D.* — As a weight, the *D.* was considered also equal to the 100th part of a *mina*, or about 1/4 oz. — There are two drachmas, or drams, used as weights in America;

viz., the avoidupois, which is equivalent to $27\frac{1}{2}$ grains troy, and the apothecaries', which is equivalent to 60 grains troy.

Drach'enfels. [Ger., dragon's rock.] In Rhenish Prussia, a mountain-peak, one of the range called the Siebengebirge, situate on the right bank of the Rhine, abt. 8 m. S.E. of Bonn, and has an elevation of 1,056 ft. *D.* rises abruptly from the river, and is covered with brushwood almost to the top, whence the prospect is

Fig. 863. — THE DRACHENFELS.

magnificent, extending down the river as far as Cologne, and having a charming foreground in Bonn, with its university, and numerous villages, and time-worn castles. The cave where the dragon—from which the mountain takes its name—was wont to abide, is pointed out to the traveller. The ruins of an old castle crown the summit, and add picturesque to the Drachenfels.

"The castled crag of Drachenfels
Frowns o'er the wide and winding Rhine,
Whose breast of waters broadly swells
Between the banks which bear the vine." —Byron.

Draci'na, Dra cine, n. (Chem.) Same as DRACONINE, q. v.

Draco, (drai'ko.) an Athenian legislator, the extraordinary and indiscriminate severity of whose laws has rendered his name odious to humanity. During the period of his archonship, about B. C. 623, he enacted a criminal code, in which slight offences were punished as severely as murder or sacrilege. Hence it was said to be "written in blood." The laws of *D.*, the first written laws of Athens, were for the most part superseded by the legislation of Solon. *D.* is said to have been accidentally killed in a theatre at Ægina.

Draco. (Astron.) The Dragon, a northern constellation containing 80 stars, of which 2 are of the 2d, and 3 of the 3d magnitude. The star γ *Dracmis* or *Etanin* is celebrated as the one used in determining the co-efficient of aberration of the fixed stars. It is a bright star, nearly in the solstitial colure, and consequently the minor axis of the small ellipse which its apparent place describes in the heavens, lies in the meridian at its transit. Moreover, at the two equinoxes, when its apparent place is at the extremities respectively of this minor axis, it can be observed on the meridian at one equinox about sunrise, and at the other about sunset, so that both observations may be made without the interference of a too bright daylight. These two observations, therefore, are easily taken, and the difference in the north polar distance, which they give, is the minor axis of the ellipse described by the apparent place of the star. (Zöhl.) The flying-lizard. See DRAGON.

Draceoceph'alum, n. [Gr. *drako*, dragon, and *kephalos*, head, from the resemblance of the flowers.] (Bot.) A genus of plants, order *Lamiaceæ*. They are perennial or biennial ornamental plants, with flowers axillary and terminal, usually with large, conspicuous bracts. The genus has two American species, *D. cordatum*, the Cordate-leaved Dragon's-head, and *D. parviflorum*, the Small-flowered Dragon's-head.

Draco'ic, a. Pertaining to the lawgiver DRACO, q. v. —Relating to the constellation Draco.

Draco'nine, n. (Chem.) The coloring-matter of the resin called *Dragon's-blood*.

Dracon'tine, a. Pertaining to the Dragon.

Dracontium, (dra-kon'she-um, n.) (Bot.) A genus of plants, order *Orontiaceæ*, of which one species, *D. polyphyllum*, a native of Guiana, Surinam, and also of India and Japan, has a powerful action on the nervous system, and is useful in asthma; although at present its chief reputation is the somewhat doubtful one of curing the bite of a snake, to which its mottled stem gives it some resemblance. The flower, when it first expands, emits an intolerable stench.

Dracun'enthus, n. (Bot.) A genus of plants, order *Araceæ*.

(Zöhl.) The Guinea worm. See FILARIA.

Dra'ent, in Massachusetts, a township of Middlesex co., 1 mile from Lowell. Pop. (1897) about 2,100.

Draff, n. [D. *draf*, hog's-wash. See DRAB.] Lees; dregs; refuse matter; —specifically, the wash given to hogs, or grains to cattle.

Draffish, a. Worthless; paltry; drabby.

Draffy, a. Worthless; dreggy.

Draft, n. [Corrupted from DRAUGHT, q. v.] A drawing; anything drawn.

—An order directing the payment of money; a bill of exchange; as, a *draft* on a banker.

(Mil.) A drawing or selection of men from an army, or from one corps to complete another; as, *drafts* from a regiment.

(Com.) An allowance for waste on goods sold by weight; as, the *draft* on a chest of tea. — An allowance made at a custom-house on excisable goods.

(Naut.) Depth of water necessary to float a ship; as, her *draft* is sixteen feet.

—A drawing of lines for a plan; delineation; sketch; plan delineated; outline of a writing or document; as, the *draft* of a letter. See DRAUGHT.

—A current of air. See DRAUGHT.

—v. a. To draw; to delineate; to draw the outline of; as, to *draft* a plan. — To compose in an epistolary or literary manner; as, to *draft* a petition. — To draw men from a military body or position; to select; to detach; to draw men from any company, association, or collection; as, to *draft* men for the army.

Draft-engine, n. (Mining.) An engine used for pumping, &c.: a donkey-engine.

Draft-horse, n. See DRAUGHT-HORSE.

Draft-net, n. See DRAUGHT-NET.

Draft-ox, n. See DRAUGHT-OX.

Draftsman, n. Same as DRAUGHTSMAN, q. v.

Drag, v. a. [A. S. *dragan*; D. *trekken*; Ital. *dragna*, to be drawn; Lat. *traho*, to draw, drag, or haul. See TRACT.] To draw; to pull; to haul; to draw along the ground by main force; to draw along slowly or heavily.

"A wounded snake *drags* its slow length along." —Pope.

—To pull about with force, roughness, or violence.

"The weight of my misfortunes *dragg'd* you down." —Dryden.

—To draw, as anything burdensome; — hence, to pass in trouble, sorrow, or difficulty.

"My heart . . . *drags* at each remove a lengthening chain." —Goldsmith.

—To draw contemptuously along, as unworthy to be carried.

"He is content to *drag* me at his chariot-wheels." —Stillington.

—To harrow; to explore with a drag.

—v. n. To be drawn or dragged along; to hang so low as to trail on the ground; as, "*dragging* chains." —Dryden.

—To fish with a drag; to recover by means of a drag; as, to *drag* for a drowned person. — To be moved slowly; to proceed heavily; to pass lingeringly.

"The day *drags* through, though storms keep out the sun." —Byron.

—To hang or grate on the ground, as a door.

—n. A net or something to be drawn along the ground.

(Agric.) A particular kind of harrow for breaking up ground.

—A low cart or sledge for transporting heavy weights; as, a timber-drag.

—In England, a carriage resembling a stage-coach; as, a four-in-hand drag.

—An instrument with hooks, to catch hold of things under water, and bring them to the surface. A machine for dredging docks, rivers, &c. — See DREDGING-MACHINE.

—A mechanical arrangement, by which the speed of a vehicle can be decreased by stopping or slackening the rotation of one or more of the wheels. The original *D.* was a very primitive arrangement, and was generally called the *shoe* or *skid*; it consisted of a hollow piece of iron, not unlike a shoe in shape, which fitted the tire of one of the hind wheels. It was attached to the bottom of the carriage by a chain, and when applied was put under one of the hind wheels; by this means, acting as a sort of wedge, it prevented the wheel from going round, and thus retarded the velocity of the vehicle. The invention of the patent drag was a great improvement upon this clumsy mechanism. By means of the patent drag a sort of skid is pressed against one of the sides of a wheel, effecting all the stoppage required, with the advantage that the whole can be regulated by the driver, without stopping or getting down, by means of a handle connected with a series of rods and levers. In the case of the shoe-drag, the stoppage of the carriage every time it was put on or taken off was absolutely necessary. The use of the *D.* is to keep the vehicle from pressing too hard upon the horses when going down-hill at their ordinary pace. Powerful drags, which act in a similar manner to that described, are used for stopping or decreasing the speed of railroad trains.

—A heavy, listless motion or movement; as, "*a drag* in his walk." (Hazlitt.) — A barge or boat in tow.

(Naut.) Whatever serves to retard a ship's way. — Any person or thing that is an obstacle to progress or prosperity; as, a large family of children is a *drag* to a poor man.

(Mach.) In marine steam-engineering, the difference between the propulsive powers of the various floats of a paddle-wheel, or blades of a screw-propeller.

(Founding.) See DRAG-BOX.

(Building.) In masonry, a steel instrument for completing the dressing of soft stone without grit.

Dragan'tine, n. A mucilage prepared from gum tragacanth.

Drag-bar, n. (Mach.) A strong iron rod, with eye-holes at each end, connecting a locomotive-engine and tender by means of the drag-bolt and spring. (Sometimes called *draw-link*.)

Drag-bolt, n. (Mach.) The strong bolt coupling the drag-bar of a locomotive engine and tender together, and removable at pleasure.

Dragee, (drazh'ai, n.) [Fr.] (Confectionery.) An almond or dried preserve, covered with white sugar.

Drag'gle, v. a. [Dim. of *drag*.] To draw or trail along the ground; to wet and bemire by drawing on ground and mud, or on wet grass; to drabble.

"You'll see a *dragged* damsel here and there." —Gay.

—v. n. To be drawn on the ground; to become wet, soiled, besmirched by being drawn on the mud or on wet ground.

"His *dragging* tail hung in the dirt." —Hudibras.

Draggle-tail, n. Same as DRABBLE-TAIL, q. v.

Draggle-tailed, a. Slatternly; untidy.

Drag-hook and Chain, n. The strong hook and chain attached to the front of a locomotive's tender railroad-carriage, &c.

Drag'-link, n. (Mach.) The link that connects the cheeks of a double crank. See DRAG-BAR.

Drag'-man, n. One who uses a drag-net in fishing.

Drag'-net, n. A net to be drawn along the bottom of a river or pond for taking fish.

Dragoman, n.; pl. DRAGOMANS. [It. *dragomani*; Pers. *tarjman*; Ar. *tarjamān*, an interpreter, from *t* *jam*, to interpret.] A term applied, in Turkey, to interpreters or foreign guides. The diplomatic dragomans, however, are very important personages, and serve as a means of communication between the officers of Ottoman government and the ambassadors of other European nations. They are allowed several important privileges, not the least of which is, that they and their families are not considered to be under Turkish law, but under the jurisdiction of the country by whose embassy they are employed. As the laws of Turkey are very severe and summarily carried out, this privilege much valued. The diplomatic *D.* are seldom pure natives, but mostly Italians, descended from Genoese Venetian merchants. The occupation of the ordinary Turkish *D.* is exactly similar to that of the French *commissaire*, and the Italian *cicerone*. *D.* of this description are provided at many of the hotels in Constantinople and other cities throughout Turkey.

Drag'on, n. [Lat. *draco*; Gr. *drakon*, from *derkom* *edraikon*, to see; Sansk. root *drag*.] (Myth. & Art.) nearly every country, and at all times, there have been legends concerning the existence of a huge monster, who went about devouring and devastating all before it. The monster, or dragon, as it is generally called, is supposed to be the symbolical representative of arrogant power and cruelty, whose sole object is to oppose order and progress. Although it is probable, as Brand says, that

Fig. 864.—FABULOUS FIGURE OF A DRAGON.

"the dragon is one of those shapes which fear has created to itself," nevertheless, from the generality of legends concerning this winged saurian, it is possible that the existence of some species of the pterodactyl in very remote times, may have originated the superstition. However this may have been, it is certain that this mythical animal, in all ages, has been looked upon as a minister of evil, the destruction of which was considered one of the greatest objects of human energy. The task was usually allotted to gods and heroes. Apollo killed the Python, and Perseus slew the dragon, and saved Andromeda. Hercules, as the ideal of physical power, is also represented as a dragon-slayer. From poetry the legend of the *D.* passed into art, and the Greeks and Romans bore it as an emblem on their shields and helmets. In the "Nibelungen Lied," in later times Siegfried is represented as killing a *D.*; and in the epic of Beowulf, the two contests of the hero, first with the monster Grendel, and afterwards with the *D.*, form the principal incidents of the poem. Among the Scandinavians, Thor was described as a dragon-slayer. Among the Teutonic tribes the practice of bearing the *D.* as emblem on their shields and banners was common. Among the Celts the *D.* was considered the emblem of sovereignty, and as such was borne on the helmet of the monarch. In the middle ages, in religious paintings, the *D.* was looked upon as the representative of sin. Saints and martyrs are frequently depicted trampling a dragon underfoot. It is also used with this significance in the figure of St. George and the dragon. — Sometimes it has been used as a symbol of heresy. A body of men in Hungary, who enrolled themselves in order to crush John Huss and his followers, called themselves Knights of the Order of the *D.*

(Script.) A word often used to signify a sea-monster, huge serpent, &c.; thus, in *Deut.* xxxii. 33, *Jer.* li. 3, and *Rev.* xii. 3, it evidently implies a huge serpent; *Isa.* xxvii. 1, li. 9, *Ezek.* xxix. 3, it may mean the crocodile, or any huge sea-monster; while in *Job.* xxx. 2, *Sam.* iii. 1, *Mic.* i. 8, it seems to refer to some wild animal of the desert, most probably the Jackal.

—A fiery, shooting, meteoric exhalation from moist grounds, in the form of an imaginary serpent. — A fierce violent person, male or female; as, she is a *dragon* of virtue.

Sir Francis Drake

1545-1596

(*Her.*) The figure of the *D.* is much used in heraldry; and when an animal, such as a lion or tiger, is represented with its own head, but with a dragon's wings and tail, it is said to be dragonne.

(*Astron.*) The constellation DRACO, *q. v.*

(*Mil.*) A short species of carbine, originally carried by dragoons.

(*Zoöl.*) A term applied to a genus of small Saurian reptiles (genus *Draco* of Linnaeus), belonging to the fam. of

Fig. 865. — FLYING DRAGON.

(*Draco fimbriatus.*)

the *Iguanidae*, and characterized by two lateral aliform productions of the skin used as a parachute, and supported upon the first six pairs of ribs, which, instead of bending round the thorax, are elongated and directed upwards for that purpose. They are generally called Flying dragons, or Flying lizards.

a. Pertaining to a dragon or dragons; resembling a dragon; — hence, something forbidding or frightful; as, "her dragon yoke." — *Milton.*

rag-on-beam. *n.* (*Carpentry.*) A short beam or piece of timber, lying diagonally with the wall-plates at the angles of a roof for receiving the heel or foot of the hip-rafter. It is fixed at right angles with another piece, called the *angle-tie*, which is supported by each returning wall-plate, on which it is cocked down. (Called also *Dragon-piece.*)

rag'on. (*Boca del.*) ("Dragon's Mouth,") a passage in the U. States of Colombia, prov. Veragua, leading from Lake Chiriqui to the Caribbean Sea.

rag'onet. *n.* A little dragon.

(*Zoöl.*) The common name of the *Callionymus*, a genus of fishes of the *Gobiidae*, distinguished by having the gill-openings reduced to a small hole on each side of the nape, and the ventral fins placed under the throat, separate, and larger than the pectorals. They are found in the Mediterranean and northern seas.

ragon-fish. *n.* (*Zoöl.*) The DRAGONET, *q. v.*

ragon-fly. *n.* (*Zoöl.*) See ODONATA.

ragonish. *a.* Dragon-like; resembling a dragon.

"Sometimes we see a cloud that's dragonish." — *Shaks.*

ragonnades. *n. pl.* (*French Hist.*) The persecutions of the French Protestants by Louis XIV., especially the military expeditions, consisting chiefly of dragoons, which were dispatched into the southern provinces by Louvois in 1684 and 1685, are known in history as the *Dragonnades*. They were followed by the revocation of the Edict of Nantes (*q. v.*), Oct. 22, 1685.

ragon's-blood. *n.* See CALAMUS.

ragon's-claw. *n.* See CORALLORIZA.

ragon's-head. *n.* (*Bot.*) See DRACOCEPHALUM.

(*Her.*) A part of the celestial constellation Draco, used in ancient emblazements to denote tenné, or orange-color, in the arms of sovereigns. — The *dragon's tail* was also used to denote a conchine.

rag-on-shell. *n.* (*Conch.*) A species of pratella or limpet.

ragon's Mouth. a passage between the island of Trinidad and the peninsula of Paria, connecting the Gulf of Paria and the Atlantic Ocean. It is 12 m. wide, and interspersed with many islets.

rag'on's-water. *n.* (*Bot.*) A name sometimes applied to some species of the genus CALLA.

ragon-tree. *n.* (*Bot.*) See DRACENA.

ragoon. *n.* [*Fr. dragon*; *D. dragonder*, from *dragon*.] (*Mil.*) One of a class of soldiers, who originally carried a carbine called a *dragon*; in the modern and specific sense, a horse-soldier belonging to a regiment of cavalry; termed *heavy* or *light*, according to their mode of equipment and nature of service; thus, lancers, hussars, carabineers, &c., are, properly speaking, *light dragoons*; cuirassiers, &c., *heavy dragoons*.

A variety of pigeon.

v. a. [*Fr. dragonner*.] To persecute by abandoning a place to the rage of *dragons* or soldiers. — To enslave, or reduce into subjection by military force; as, to *dragon* a people. — To harass; to force; to compel to submit by violent measures; as, *dragoned* into submission.

Dragoonade. *n.* Same as DRAGONNADE, *q. v.*

Drag-sheet. *n.* A contrivance in the form of a sail, used to deaden the drift of a ship when making heavy weather.

Drag's-man. *n.* One who manages a drag.

Dragnignan. (*dra'go'-een-yawng.*) a town of France, cap. of dep. Var, 12 m. from Frejus, and about 430 m. from Paris; pop. 11,141.

Drain. *v. a.* [*Dan. draine*; *A. S. dragan*; *O. Ger. tragan*; to draw. See DRAW.] To draw off; to filter; to cause to pass through some porous substance; as, to *drain* a marsh. — To empty or clear of liquor by causing the liquor to drop or run off slowly; to make dry; — hence, to exhaust or empty; as, to *drain* a country of its inhabitants. — To draw off gradually, or by degrees; as, to *drain* a tumbler of punch.

v. n. To flow, or cause to flow off, gradually; as, the water *drains* off. — To be emptied or exhausted of liquor by flowing or dropping; as, to set a bottle to *drain*.

n. Act of draining, drawing off, or exhausting by depletion; as, a *drain* of specie from a bank. — Any channel constructed underground for the purpose of carrying off surplus water and refuse matter from houses, fields, &c. When *D.* are open and are merely channels cut along the surface of the ground, or by the sides of streets and roads, they are called *ditches* and *gutters*; when they are of great size, for the purpose of carrying off the refuse of a town, they are called *sewers*. *D.* that lie underground may be formed of pipes of clay or earthenware, or of low walls of brick or stone, raised on a bottom formed of broad flat stones, and covered in with the same. These are, however, more liable to become choked by the roots of trees or shrubs growing into them than those which are formed of pipes. Circular *D.* of brick-work are called *barrel-drains*.

— A draught of liquid refreshment; as, to take a *drain* of whisky. (*Vulgar.*)

pl. The refuse grains from a brewer's mash-tub. (Used in England.)

Drainable. *a.* That may be drained.

Drainage. (*drän'aj.*) *n.* A draining; a gradual emptying of any fluid. — The mode in which the waters of a country pass off by its streams and rivers. — (*Engineering.*) The system of draining towns, land, &c. — That which flows out of drains.

Drainage Commission. a body of individuals commissioned to carry out the draining of a city, &c.

Drain'er. *n.* One who drains, or causes to flow off.

— An utensil on which things are set to drain; a filter.

Drain'ing. *n.* (*Agric.*) The art by which surplus water may be carried off from swampy districts and stiff clay soil, as well as other land in which the excess of water is prejudicial to vegetation. It may be applied to low districts containing thousands of acres, or to single fields of comparatively small extent. In the latter case it is chiefly applied to render stiff and tenacious clay soils friable, fertile, and productive; and, indeed, it is now found that no land of this description can possibly be brought into proper cultivation without having recourse to this system for its amelioration. It is considered better that all drains should be cut in the direction of the slope of the field, which is the direction in which it is ploughed from top to bottom. The trenches for drains are cut with spades of different widths, the upper part of the trench being taken out with the widest, and a very narrow one, called a bottoming-tool, being used to form the bottom of the trench, so that the vertical section of a trench cut for the formation of a drain exactly resembles that of a flower-pot. The bottom of each trench was at first filled with rough stones only, about 2 or 3 inches in diameter, and a thick layer of soil was thrown over them; but, subsequently, drain-tiles and pipes were used without the addition of any stones above them, as the drains were found to be less liable to obstruction when the whole of the trench above the pipes was filled in with earth. The *tile-and-shoe drain* was introduced when the practice of filling the trench with stones was first abandoned; this consisted of a flat tile, or shoe, which was laid at the bottom of the trench, and on which another tile, arched in form, was placed, which was of the same length as the shoe on which it stood. But these have been superseded by the *cylindrical drain-pipes*, which are made of all sizes, from 12 to 24 inches in length, and from 1 to 6 inches in diameter. Pipes about two inches in diameter are commonly used for small drains, and the larger sizes, from 4 to 6 inches in diameter, for sub-main drains. In loose or peaty soils the pipes should be connected by collars, but this is not required in ordinary soils. The depth and width of the trench at the bottom of which the drain is to be placed must also be regulated, in a great measure, by the nature of the soil; but it should in no case be less than 2 feet nor more than 6 feet below the surface. When the drains are about 3 feet deep, and less than this, they should be placed about 25 or 30 feet apart; but when they are deeper than 3 feet, they should be placed apart at distances varying from 50 to 70 feet. The practice has been successfully introduced into the United States; and in New York, New Jersey, Pennsylvania, Ohio, &c., draining-tiles are become an important branch of fabrication. Unhappily the expense of underground drainage is a serious obstacle to the rapid extension of the practice. It has been calculated that the cost of drainage in nearly all arable soil varies from \$35 to \$50 per acre, a fact which makes the draining of a large farm a very expensive process, and stands greatly in the way of drainage development. Lateral drains may be connected with mains, or one main with another, by the useful device shown in Fig. 866. These junction pieces, as shown in the accompanying engraving, can be employed for all the different sizes of mains and laterals; and by

their use, the water from the lateral is introduced into the main at an angle of 45°. As it enters near the bottom

Fig. 866. — JUNCTION-PIECE OF DRAINING-TILES.

of the main it materially accelerates the flow in the latter by its force of entry, while, with the best joint that it was formerly possible to make by the aid of the tilepick, there was an interruption of the flow, and frequently a tendency to deposit silt at the junctions. Owing to this improvement, the pieces of intersection are made the safest of the whole drain, instead of being, as they were formerly, the most insecure. The principal advantages to be derived from *D.* are these: — A deeper, richer mould is obtained, which readily absorbs moisture in time of drought; heavier crops are obtained, which ripen earlier, as the seed can be sown sooner on drained than on undrained soil; mosses, rushes, and coarse sour grass are entirely removed in course of time, and the air is no longer tainted with the exhalations that rise from marshy land; the soil also can be worked sooner after a heavy fall of rain than it could have been when it was in an undrained state. The drainage of ex-

Fig. 867. — OUTLET OF A DRAIN.

(With movable grating.)

tensive districts comes within the province of the civil engineer. Among the principal tracts of country that have been reclaimed and made available for pasturage and tillage by *D.* may be mentioned, the Bog of Allen, in Ireland; the Bedford Level, in England; and the Pontine Marshes, near Rome. In Holland, where immense works of this nature have been carried out, the surface of the land reclaimed lies below the level of the sea, and the water that is continually collecting from rain and other causes is discharged through self-acting floodgates, or has to be lifted, by wheels or Archimedean screws, over the embankments that have been constructed to prevent the encroachments of the water. These wheels and pumps are worked by means of windmills, and sometimes by steam-power.

Drain'ing-plough. (*plow.*) *n.* (*Agric.*) A plough used in the construction of drains.

Drain'ing-tile. *n.* See DRAINING.

Drain'-trap. *n.* An appliance used in drains, to prevent the egress of foul air, &c.

Drains'ville. in Virginia. See DRANESVILLE.

Drake. *n.* [*Ger. enterich* — *ente*, a duck, and *reich*; *A. S. ric*, a head, a chief; *Dan. andrik* — *and*, a duck, and *rig*, a kingdom.] The male of the duck species of fowls. (*Zoöl.*) See DRAKE-FLY.

— [*From Lat. draco.*] (*Mil.*) A small piece of artillery, formerly used.

Drake, Sir Francis, an English navigator and naval commander, b. at Tavistock, Devonshire, 1545. He first served in the royal navy under his relative, Sir John Hawkins; and distinguished himself by his valor in an unsuccessful expedition against the Spaniards, in the harbor of Vera Cruz. In 1570 he went to the W. Indies, on a cruise against the Spaniards, which he soon repeated with success; and in 1572, having received the command of two vessels, for the purpose of attacking the commercial ports of Spanish America, he took possession of two of their cities, and returned laden with booty. On his return he equipped, in Ireland, three frigates at his own expense, with which he served as a volunteer, under the Earl of Essex, and distinguished himself so much by his bravery, that Sir Christopher Hatton introduced him to Queen Elizabeth. *D.* disclosed to her his plan, and being furnished with five ships, he sailed, in 1577, to attack the Spaniards in the South Seas. In this expedition he ravaged the Spanish settlements, explored the North American coast as far as 48° N. Lat., and gave the name of *New Albion* to the country he had discovered. He then went to the East Indies, and having doubled the Cape of Good Hope, returned to Plymouth in 1580. The Queen dined on board the ship at Deptford, and knighted him. In 1585 he again sailed to the W. Indies, and succeeded in taking several places and ships. In 1587 he commanded a fleet of 30 sail, with which he entered the harbor of Cadiz and other Spanish ports, and destroyed an immense number of ships which were preparing for the great attack on

England; and, in the following year, he commanded as vice-admiral under Lord Howard, and had his share in the destruction of the Spanish armada. He d. off Nombre de Dios, in 1596.

Drake, in *Missouri*, a post-office of Gasconade co.

Drakenberg, CHRISTIAN JACOBSEN, (*dra'ken-bairg*), a Norwegian seaman, b. 1626, remarkable for his great age. From his 13th to his 68th year he followed the sea: was then captured by pirates, and kept in slavery till his 84th; in his 111th year he married a widow of 60, and d. at the age of 146.

Drake-fly, *n.* A species of fly, of the *Muscida*, used in fishing.

Drake's Branch, in *Virginia*, a P.O. of Charlotte co.

Drake's Channel, between the islands of Tortola and St. John, in the British W. Indies.

Drake's Creek, in *Arkansas*, a P. O. of Madison co.

Drake's Creek, in *Illinois*, a village of Shelby co., abt. 55 m. E.S.E. of Springfield.

Drake's Creek, in *Kentucky*, enters the Big Barren River in Warren co.

Drake's Mills, in *Pennsylvania*, a post-office of Crawford co.

Drakes'town, in *New Jersey*, a post-village of Morris co., on Schooley's Mountain, abt. 16 m. W. by N. of Morristown.

Drakes'town, in *Pennsylvania*, a vill. of Somerset co.

Drakesville, in *New Jersey*, a village of Morris co., about 12 miles N.W. of Morristown.

Drakesville, in *Iowa*, a post-village of Davis co.

Drake's stone, *n.* A broad, flat stone, made to ricochet upon the surface of water; also, the sport of so doing; called, more commonly, *ducks and drakes*.

Dram, *n.* [Contracted from *Lat. drachma*. See *DRACHM*.] A small or minute portion or quantity.

"A dram of sweet is worth a pound of sour."—*Sidney*.

—As much spirituous liquor as is drunk at once; as, a *dram* of gin;—hence, by implication, potation; habitual intoxication.

—A measure of quantity. See *DRACHM*.

—*v. n.* To indulge in dram-drinking. (*R.*)

Drama, *n.* [*Lat.* and *Gr.*, from *draō*, to act, to accomplish; *Fr. drame*.] Representation of an act or actions: an action as represented on the stage; a poem or composition representing a picture of human life, and accommodated to action. Any actual sequences of events, characterized by dramatic unity and incidence; as, "close the drama of the day."—*Berkely*.

—Dramatic literature generally. Under the head of *DRAMA* (p. 832) will be found an historical epitome of dramatic literature, and of the stage, both in ancient and modern times, serving as reference to the various articles in this work relating to dramatic and theatrical subjects.

Dramatic, **Dramat'ical**, *a.* [*Gr. dramatikos*; *Fr. dramatique*.] Pertaining to the drama; represented by action; theatrical, not narrative; as, a *dramatic* composition, *dramatic* effect, &c.

Dramat'ically, *adv.* In the manner of the drama; by action or representation.

Dramatis Personæ, [*Lat.*] The interlocutors in a play, or drama; the characters in any event or episode of life; as, the *dramatis personæ* of a novel.

Dramatist, *n.* One who writes a dramatic composition; a playwright; an author of theatrical pieces.

Dramatizable, *a.* That may be dramatized.

Dramatize, *v. a.* [*Gr. dramatizō*.] To compose in the form of the drama; to give to a literary composition the form of a play, or stage effects.

Dramaturgy, *n.* [*Gr. dramaturgia*.] The art of dramatic poetry, and representation of stage-action;—a word used by German writers.

Dram-drinking, *n.* Habitual drinking of drams of spirituous liquor.

Drammen, a seaport-town of Norway, consisting of two distinct parts, on the Drammen, 22 m. from Christiania. Its parts were formerly separate villages, now united by a bridge. It has a college, parish church, and several schools. *Manf.* Leather, tobacco, sail-cloth, oil, ropes, and spirits. It has also shipbuilding-docks, and has a trade in deals, timber, pitch, and iron. *Lat.* 59° 44' N., *Lon.* 10° 12' E. *Pop.* 13,426.

Dram'ing, *n.* Act, practice, or habit of dram-drinking.

—*n.* An appliance used by silk-throwsters.

Dram-shop, *n.* A tavern; a groggery; any place where spirits are retailed in drams.

Dram Timber, *n.* A commercial name given to the timber exported from Drammen, in Norway.

Drainesville, or **DRAINSVILLE**, in *Virginia*, a post-village of Fairfax co., abt. 17 m. W. of Washington. Here, Dec. 20, 1861, a severe action took place, between Gen. Reynolds' brigade of National troops, 4,000 strong, and a force of 2,500 Confederates, commanded by Gen. J. E. B. Stuart. The latter sustained a defeat, losing 43 killed and 143 wounded. The Union loss was trifling, both in killed and wounded.

Drank, *imp.* and *pp.* of *DRINK*, *q. v.*

Drap, *n.* [*Fr.*] Cloth of any kind.

Drape, *v. n.* [*Fr. draper*, to cover with cloth, from *drap*, cloth; from *L. Lat. drappus*; *It. drappo*; *Sp. tráp*, cloth. *Etymol.* unknown.] To cover with cloth or drapery; as, to *drape* an apartment.

Draper, *n.* [*Fr. drapier*, from *drap*, cloth.] One who sells cloth; a dealer in cloths.

Draper, JOHN WILLIAM, an American chemist, b. near Liverpool, England, 1811. His chief works are: *Human Physiology, Statical and Dynamical* (1856); *History of the Intellectual Development of Europe* (1863); and a *History of the American Civil War* (1867-8). D. 1882.

Drapery, *n.* [*Fr. draperie*; *L. Lat. draperia*.] Cloth-

work; the trade of making or selling cloth; the place where cloth is sold.

—Cloth in general; stuffs of wool.

—Hangings, curtains, tapestry, &c., as accessories to art and decoration.

Draper, or **DRAPERSVILLE**, in *Utah*, a post-village of Lake co., abt. 18 m. S. of Salt Lake city; *pop.* abt. 700.

Dras'tic, *a.* [*Fr. drastique*; *Gr. drastikos*, from *draō*, to act.] (*Med.*) Powerful; active; efficacious; acting with strength or violent effect.

—*n.* (*Med.*) A purgative medicine which operates powerfully.

Draughton's Store, in *North Carolina*, a hamlet of Sampson co.

Draught (*draft*), *n.* [From *A. S. dragan*, to draw. See *DRAW*.] Act of drawing; quality or capacity of being drawn; force or power necessary to draw anything.

"A general custom of using oxen for all sorts of draught." *Temple*.

—The drawing of liquor into the mouth and throat; act of drinking; as, to drink ale off at a *draught*.—The quantity of liquor drunk at once.

"Shallow draughts intoxicate the brain."—*Pope*.

—Act of delineating, or that which is delineated; a representation by lines; a picture; a figure painted or drawn by the pencil; a written sketch or outline; delineation; as, the *draught* of a protocol.

"The happy draught surpassed the image in her mind." *Dryden*.

—That which is taken by drawing, or by sweeping with a net; as, a *draught* of fishes.—A sink or drain; a sewer.

An order for the payment of money; a bill of exchange. See *DRAFT*.—A current of air circulating through any inclosed place; as, to sit in a *draught*.—The rate of motion of the ascending current of heated air and other gases in a chimney.—Capacity of being drawn; as, a plough of easy *draught*.

(*Mil.*) A detachment. See *DRAFT*.

(*Naut.*) The depth of water necessary to float a ship, or the depth a ship sinks in the water, especially when laden; as, a twenty-two feet *draught*.

(*Ship-building*.) The drawing or design by which a ship is built, which is generally by a scale of one-fourth of an inch to a foot.

—*pl.* (*Games*.) A game played on a checkered board. See *CHECKERS*.

(*Med.*) A liquid form of medicine intended to be taken at once, or at a draught; whence its name.

(*Masonry*.) A part of the surface of the stone, hewn to the breadth of the chisel on the margin of the stone according to the curved or straight line to which the surface is to be brought. When the draughts are framed round the different sides of the stone, the intermediate part is wrought to the surface by applying a straight edge or templet.

Draught, *v. a.* To draw out; to call forth. See *DRAFT*.—To diminish by drawing.

Draught, *a.* Used for drawing; adapted to draw; as, a *draught* horse.

—Drawn directly from a barrel or other depository; as, *draught* porter;—in contradistinction to *bottled*.

Draught-board, (*draft-board*), *n.* A checkered board of black and white squares, on which draughts are played.

Draught-com'passes, *n. pl.* Compasses for drawing fine lines in architectural designs.

Draught-hook, *n.* (*Mil.*) One of the two iron hooks on the cheeks of a gun, two on each side, used in drawing the piece to and fro.

Draught-house, *n.* A place for the reception of rubbish.

Draught-net, **Draft-net**, *n.* A net hung behind a vessel's counter when under weigh.

Draughtsman, **Draftsman**, *n.* One who draws out plans and designs.—A toper; a tippler; one who is a dram-drinker. (*R.*)

Draughtsmanship, *n.* Office or employment of a draughtsman.

Draughty, (*draft'y*), *a.* Relating to a draught; full of draughts; as, a *draughty* house.

Drive, the old *imp.* of *DRIVE*, *q. v.*

"And through his navel drive the pointed death."—*Pope*.

Drave, (*drav*), [*Ger. Drau*.] A river of central Europe, forming one of the principal tributaries of the Danube. It lies wholly in the Austrian empire, extending between *Lat.* 46° 50' and 45° 30' N., and *Lon.* 12° 20' and 19° E. The *D.* rises in the E. extremity of the Tyrol, and, after a variously deflected course (estimated at 370 m.), falls into the Danube, near Esseg, in Hungary. This river receives several minor affluents of no great importance, and has the cities of Linz, Greifenburg, Villach, and Warasdin situate on its banks. In a commercial point of view, the *D.* is, at present, but little regarded, its navigation, in many parts, being impeded by many obstructions.

Dra'vosburgh, in *Pennsylvania*, a post-office of Alleghany co.

Draw, *v. a.* (*imp.* *DREW*, *pp.* *DRAWN*.) [*A. S. dragan*; *Swed., Goth. draga*; *Lat. traho*. See *TRACT*.] To pull along; to haul; to cause to move forward by force applied in advance of the thing moved; to drag; to pull towards one; to pull out; as, to *draw* a carriage.—To unsheathe; to bring by compulsion; to cause to come; to pull off or out; as, to *draw* a badger.—To raise from anything; to bring up or out; as, to *draw* water from a well.—To suck; to drain of contents; as, to *draw* milk from the breast.—To attract; to cause to move or tend towards one's self;—hence, to allure; to entice; to captivate.

"Beauty draws us with a single hair."—*Pope*.

—To engage; to take out; to let out, as a liquid; as, to *draw* a glass of beer.—To extract; to send forth; to

force out; as, to *draw* a tooth, to *draw* a sigh.—To fetch; to produce or bring, as an efficient cause; to get to obtain; to bear.

"Draw corruption, and God's curse, by sin."—*Paries*.

—To receive, procure, or take; to win; to gain; as, to *draw* a prize in the lottery, to *draw* money from a bank.—To derive from some cause or origin: to deduce from postulates, or by induction; as, to *draw* an inference.—To lengthen; to expand; to spin out; to stretch to extend in length; as, to *draw* a long face.—To lead as a motive; as, to *draw* a crowd together.

"My purposes do draw me much about."—*Shaks*.

—To represent by lines drawn upon a surface; to delineate to form a pictorial representation of; as, to *draw* a likeness.—To describe; to represent by words, or in fancy as, to *draw* a description.—To induce; to persuade; as, to *draw* one into a scrape.

"The English lords drew the Irish in to dwell among them."—*Davie*.

—To compose or write, by way of formulary; to prepare the draught of; as, to *draw* a bill of exchange, to *draw* a memorial.

"Clerk, draw a deed of gift."—*Shaks*.

—To disembowel; to eviscerate; as, to *draw* a fowl "hanged, drawn, and quartered," (said of a criminal)—To require a certain depth of water for floating; as, the ship *draws* fourteen feet.—To inhale; to take in by inhalation; to inspire.

"Where I first drew air."—*Milton*.

To draw a cover. (*Sport*.) To clear a cover of game.—To draw a curtain. To close or unclose a curtain; hence, metaphorically, in the first sense, to cover or hide anything.—To draw in. To haul, bring, or gather in; as, "draw in the flowing reins." (*Gay*).—To entice to inveigle; to induce to enter into; as, *drawn into* conspiracy.—To draw off. To extract; to drain; as, *draw off* water.—To withdraw; to abstract.

"It draws men's minds off from the bitterness of party."—*Addison*.

To draw on. To bring on; to cause; to invite; occasion; as, to *draw on* a dupe, *drawn on* by negligence.—To draw out. To protract; to lengthen; expand or stretch out; as, to *draw out* hot iron.—To induce by artifice, or apparent motive; as, to *draw out* a person's conversational powers.—To draw up. To compose or set forth in a formal manner; to form writing; to draught; as, to *draw up* a will.—(*Mil.*) form in order of battle; to arrange in order, as a body of troops; to array; as, an army *drawn up* in battle.—*Drawn butter*. Butter melted for table-use.—*Draw game*; *drawn battle*. A match or conflict contested with equal spirit, so that neither party wins.—To draw down. To discharge an arrow, bolt, or shaft, from a bow by drawing the string to its utmost tension, and then letting it go.—To draw interest, or dividends. To be entitled to receive interest on money invested or deposited in the public funds, &c.—To draw back. (*Com.*) To receive back, as the duty paid on certain goods shipment and exportation.

—*v. n.* To pull; to exert motive force in drawing; to draw with strength; to haul; as, the ship's sails *draw* well.

"An heifer . . . which hath not drawn in the yoke."—*Deut. xx*.

—To act as a weight or incentive; to act as an attract force; as, the new play *draws* crowded houses.—To contract; to cause to shrink.—To move; to advance to make progress; literally, to draw one's self;—adverbially, and prepositionally.—To have draught current, as a chimney; as, the fire *draws* well.—To unsheathe a sword or other weapon carried in a scabbard.—To use or practise the art of delineating figures to sketch; to form pictorial representations; as, to *draw* a profile.—To make a written requisition for payment of money;—in most cases preceding *on*; as, to *draw* a banker.—To draw or come together; to be collected or amalgamated.

"They draw together in a globose form."—*Blackmore*.

—To admit the action of pulling or exercising; as, a pipe *draws* easily.—To take a card from a pack; to take a chance in a lottery; as, to *draw* a court-card.

(*Med.*) To collect the matter of an ulcer or abscess; to cause to suppurate; to excite to inflammation,uration, or discharge.

To draw off. To empty; also, to retire or retreat; to draw off the liquid contents of a cask, to *draw off* troops.—To draw back. To move backwards; to retreat; as, to *draw back* from participation in anything.—To draw near, or nigh. To approach; to come close to.—"My fate draws nigh." (*Addison*).—To draw on. To forward; to advance; as, time *draws on*.—To draw up. To form in order, disposition, or array; as, he *draws up* his troops in echelon; a document correctly *drawn up*.

—*n.* Act of drawing; draught.—The lot or chance drawn; as, he *drew* a blank.—A drawbridge. See *DRAWBRIDGE*.

Draw'able, *a.* That may be drawn.

Draw'back, *n.* Any loss of advantage, or deduction from success or profit.

(*Com.*) An allowance made by the govt. to merchants on the re-exportation of certain imported goods liable to duties, which in some cases consist of the whole, in others of a part, of the duties which had been paid upon importation. For the various Acts of Congress which regulate *D.*, consult Brightly, *Dig. U. S. Laws*.

Draw-bolt, *n.* (*Mach.*) Same as *COUPLING-PIN*.

Draw-bore, *n.* (*Joinery*.) The pinning a mortise tenon, by piercing the hole through the tenon near to the shoulder than the holes through the cheeks in the abutment in which the shoulder is to come in contact.

—*v. a.* (*Joinery*.) To make a draw-bore in; as, to *draw-bore* a mortise.

Draw-bore Pins, *n. pl.* (*Joinery*.) Pieces of stuff of the shape of the frustum of a cone, somewhat tapered at the ends.

and inserted in handles with the greatest diameter next to the handle, for driving through the draw-bores of a mortise and tenon, in order to bring the shoulder of the rail close home to the abutment on the edge of the style; when this is effected, the draw-bore pins, when more than 1 is used, are taken out singly, and the holes filled up with wooden pegs.

Draw'bridge, n. A bridge which may be raised up, let down, or drawn aside, either to admit or hinder communication. A *D.* was attached to the old baronial castles (fig. 868) to enable persons to cross the moat and

Fig. 868. — DRAWBRIDGE.

gain access to the castle-yard. It is also used to afford means of entrance to fortresses and citadels over the main ditch, being fastened by hinges to the scarp of the ditch in front of the main gateway, and raised and lowered by chains attached to the end that rests on the counterscarp, which pass over pulleys, and are wound and unwound by means of a windlass. Besides this kind of bridge, which is sometimes termed a *lifting bridge*, there are 2 other sorts, called turning or swivel bridges, and rolling bridges. The *turning bridge* moves in an horizontal plane on a pivot, which secures one end of it to the pier on which it rests; the other end takes the form of an arc of a circle, and works on small rollers, that run on an iron rail to lessen the friction. The *rolling bridge* travels on rollers for the same purpose, and is moved backwards and forwards by a wheel which works in a rack; these are often used to span a space in the centre of a bridge of some length over a tidal river, to admit of the passage of masted vessels. — See BASCULE-BRIDGE.

raw'bridge, in Delaware, a P. O. of Sussex co.
raw'bridge, in Maryland, a P. O. of Dorchester co.
raw'cansir, n. The name of a character in the Duke of Buckingham's celebrated play, *The Rehearsal*, who is a sort of "Baron Münchhausen;" — hence, a bragging, blustering, bullying, pot-valiant fellow.

raw'-cut, n. An incision made by one draw of a knife along a surface.

rawee', n. (Com.) The person in whose favor a bill of exchange is drawn, or to whom it is indorsed.

rawer, n. He who, or that which, draws or pulls.

From the hewer of wood unto the drawer of water." *Deut. xxix. 11.*
(*Com.*) He who draws a bill of exchange, or an order for the payment of money; — in contradistinction to *ravee*.

A sliding case or box in a table or other article of household furniture, which is drawn out at pleasure; as, a chest of drawers. — One who draws liquor, and attends upon guests; a waiter in a tavern; a bar-tender. — That which possesses power of attraction; as, "fire is a great *rawer*." (*Swift*). — A draughtsman; a sketcher; a delineator; as, an excellent *drawer* of other men's foibles. *pl.* A close under-garment made to draw over the other limbs; as, ladies' *drawers*.

aw'-gear, n. (Mach.) The connecting gear in general, relating to the drawing of railroad-engines, cars, trucks, &c.

aw'-gloves, n. pl. A game formerly in vogue, for presenting words by manipulation of the fingers.

aw'head, n. (Mach.) In railroad machinery, a roller connected with a coupling.

aw'ing, n. Act of pulling, hauling, or attracting. — Distribution of prizes and blanks in a lottery, raffle, &c. (*Fine Arts*). The art of representing any object by means of lines circumscribing its boundaries. *D.* is of course the foundation of everything in art, including with it a knowledge of perspective, anatomy, and proportion, and, when acquired, a given proportionable power of awing correctly what we imagine. The human figure the principal object upon which a student should be first employed; for he who can correctly draw that will be at a loss in representing anything else he may wish. He who endeavors to copy nicely the figure before him, not only acquires a habit of exactness and precision, but is continually advancing in his knowledge of the human figure; and though he seems to superficial servers to make a slower progress, he will be found at last capable of adding (without running into capriciousness) that grace and beauty which is necessary to be seen to his more finished works, and which cannot be given but by an attentive and well-compared study of the human form. In the great age of Greek art, *D.* was a liberal branch, and considered one of the most essential, the education of every gentleman. (*Pliny xxxv. 36.*)

Draw'ing-board, n. A board on which paper, canvas, &c., is laid for making drawings.

Draw'ing-master, n. One who teaches the art of drawing.

Draw'ing-pen, n. A pen used by draughtsmen for drawing lines of various thickness, and regulated by a screw.

Draw'ing-pencil, n. A black-lead pencil, used for drawing; a porte-crayon.

Draw'ing-room, n. An artist's atelier; a studio; a draughtsman's work-room. — A withdrawing-room: a room appropriated for the reception of company. — The formal reception of evening company at a royal court, or by persons in high station. — In England, it is applied to the reception by the sovereign of ladies principally, on which occasion debutantes are presented by their respective chaperones, as the act of their initiation into the fashionable world; as, a *drawing-room belle*; — correlative to *levee*, *q. v.* — The company assembled in a drawing-room.

Draw'ing-slate, n. See BLACK CHALK, and SLATE.

Draw'-knife, Draw'ing-knife, Draw'-shave, n. A tool used by joiners for shaving off surfaces. — A tool used by carpenters to cut a groove for a saw to follow, to prevent excoriation of the surface of the wood.

Drawl, v. n. [*D. draalen*, to linger; *Icel. drolla*, to contrive delays.] To speak with slow, prolonged, or affected utterance.

"In one lazy tone, the heavy page drawl on." — *Pope*.
— *v. a.* To utter words in a slow, lengthened tone, or with lazy affectation or languidness.

— *n.* A lengthened or affected utterance of the voice.

Draw'ingly, adv. By slow, lazy, affected utterance; in a drawling manner.

Draw'ingness, n. A drawling manner of speaking; slowness of utterance.

Draw'-link, n. (Mach.) See DRAG-BAR.

Draw'-net, n. A net used for ensnaring the larger varieties of birds.

Draw'-plate, n. (Mach.) A steel plate having a gradation of conical holes, through which wires are drawn to be reduced and elongated.

Draw'-spring, n. (Mach.) The spring which connects with a draw-head.

Draw'-well, n. A deep well from which water is drawn by means of a long cord, chain, or pole, — whence the metaphorical saying: "as deep as a *draw-well*," in reference to shrewd, astute, secretive persons.

Dray, Dray'-cart, n. [*A. S. drage*, from *dragan*, to drag. See DRAW.] A sledge or carriage without wheels. A low cart or carriage on wheels, constructed to carry heavy burdens; as, a brewer's *dray*. — A squirrel's nest.

Dray'age, n. Use or operation of a dray. — Money paid for hire of a dray.

Dray'-cart, n. See DRAY.

Dray'man, n. pl. DRAYMEN. One who attends a dray; specifically, a man who drives or accompanies a brewer's cart or dray.

"A drayman perch'd on a cask of beer." — *D'Urfey*.

Dray'ton, MICHAEL, one of the most esteemed of the early English poets, — most admired for his pastorals and chivalrous subjects. — born at Harshull in Warwickshire, 1563, buried in Westminster Abbey, 1631.

Dray'ton, in Georgia, a village of Dooley co.

Dray'ton, in Iowa, a flourishing township of Cedar county.

Dray'ton Plains, in Michigan, a village of Oakland co., about 5 m. N.W. of Pontiac.

Dray'tonsville, in S. Carolina, a village of Union dist., about 75 m. N.N.W. of Columbia.

Dread, (drêd') n. [*A. S. dread*, fear, *mdradan*, to fear, to reverence; *Fris. drede*, fear.] Fear united with respect; awe; reverential regard; as, "the *dread* and fear of kings." (*Shaks.*) — Great and continued fear or apprehension of evil or danger: fear of destruction; affright; terror. — Cause of fear: the person or thing dreaded.

— *a.* Exciting great fear or apprehension; terrible; frightful; awful; as, a *dread* sentence. — Inspiring awe and reverence; venerable in the highest degree.

"Summoning archangels to proclaim thy *dread* tribunal." *Milton*.

— *v. a.* To fear in a great degree: to regard with terrified apprehension; as, a *dreaded* moment.

— *v. n.* To be in great fear.

"Dread not, neither be afraid of them." — *Deut. i. 29.*

Dread'er, n. One who dreads or lives in fear.

Dread'ful, a. Full of dread; causing great fear; awful; frightful; terrible; tremendous; as, a *dreadful* reckoning, a *dreadful* accident. — Inspiring awe or reverence; venerable.

"How *dreadful* is this place!" — *Gen. xxviii. 17.*

Dread'fully, adv. Terribly; fearfully; in a manner to be dreaded; as, *dreadfully* alarmed. — Excessively; extremely; in the highest degree; as, *dreadfully* tired. (*Colloq.*)

Dread'fulness, n. Quality of being dreadful; frightfulness; terribleness; awfulness; as, the *dreadfulness* of the day of judgment.

Dread'ingly, adv. With dread; in a manner expressing dread.

Dread'less, a. Free from dread; fearless; undaunted; intrepid. — Exempt from dread or apprehension; secure from fear.

Dread'lessness, n. Fearlessness; state of being free from dread; undauntedness; intrepidity.

Dreadnaught, Dreadnought, (drêd'nawt') n. A person without dread or fear; — hence, by implication, anything proof against harm, detriment, or danger; as, a *dreadnought* cape, worn as a protection in bad weather.

Dream, n. [*D. droom*; *Ger. traum*; *Swed. dröm*; *Lat.*

dormire; *Sansk. drâ*, to sleep. Probably allied to *Heb. tardîma*, deep sleep; formed from the sound.] The representation of something in sleep, accompanied by thoughts more or less disconnected; the thought or series of thoughts formed by the imagination during sleep. — A vain fancy; a reverie; an imaginary occurrence; a visionary scheme or speculation; a wild conceit; an unfounded suspicion; a vagary; a castle in the air; an illusion.

(*Phil. and Physiol.*) Dreams are defined to be "trains of ideas presenting themselves to the mind during sleep." It frequently, if not always, happens during sleep, that while some of the mental faculties are suspended, others are still active, and are busy with numerous ideas which succeed each other with more or less regularity. This is dreaming. It is characterized by an absence of consciousness with regard to external things, and an entire suspension of voluntary control over the current of thought, so that the principle of suggestion — one thought calling up another according to the laws of association — has unlimited operation. The subject of dreams is one of the most intricate and perplexing in the entire field of mental philosophy, and it has not yet met with that amount of attention that its importance demands. Sir William Hamilton believes that, "whether we recollect our dreams or not, we always dream." To have no recollection of our dreams does not prove that we have not dreamed; for it can often be shown that we have dreamed, though the dream has left no trace upon our memory. Many other philosophers have held the same opinion; among whom Kant, who distinctly maintains that we always dream when asleep; that to cease to dream would be to cease to live; and that those who fancy that they have not dreamed have only forgotten their dreams. The phenomena of dreams also go far to prove, what is now generally believed to be true, that different mental faculties have different portions of the brain appropriated to them, and through which they act. One of the most remarkable features of dreaming is the rapidity with which the mind passes through a long series of events. Whole years may seem to the dreamer to have elapsed, and a multitude of images may have been successively piled up before him, though the time occupied therewith is known to have occupied only a few minutes, or even a few seconds. Thus a dream involving a long succession of supposed events has often originated in some circumstance that aroused the sleeper, and taken place within the short space that preceded that state of full consciousness. The character of a dream is often to be traced to some sensuous feeling or impression. Thus, Dr. James Gregory having on one occasion gone to bed with a vessel of hot water at his feet, dreamed of walking up Mount Ætna, and feeling the ground warm under him; and on another occasion, having thrown off the bedclothes in his sleep, he dreamt of spending a winter at Hudson's Bay. Dr. Reid, having a badly-dressed blister on his head, dreamt of falling into the hands of Indians, and being scalped by them. We believe that many more of our dreams may be traced to this source than is commonly imagined, and that many of those unpleasant dreams that are sometimes found to precede illness may be occasioned by feelings or sensations of which in the ordinary waking state we are unconscious. It is in this way that indigestion is so fruitful a cause of unpleasant dreams. Of the five senses, touch is the most excitable during sleep, and most frequently modifies the character of our dreams. The sense of hearing is the next; and the least excitable of all our senses is that of sight. Our belief in the reality of the scenes brought before us, and in the presence of external objects not before us, are among the most curious and important of the phenomena of *D.* Everything seems real and vivid before us. Dr. J. Cunningham attempts to explain this by maintaining that the affinity that exists between sensations and ideas is greater than is commonly imagined, and that "all thought is objective and pictorial." "We cannot think," says he, "without thinking of something, and that something must be thought of as outside the mind. It is not our thoughts, but the things we think of, that are present to our consciousness; and thus our thinking consists of a series of visions." Be this as it may, we believe that this phenomenon cannot be adequately explained by referring it to "a complicated case of association," as is sometimes attempted to be done. It is said that *D.* turn most frequently upon what has occupied our thoughts during the day, and that the most recent associations occur more readily than those which are more remote. This, however, we do not think to be so much the case as is supposed. The death of a friend may occupy the chief part of our thoughts for weeks or months, and yet during all that time he may never once appear to us in our *D.*; and it is only when he ceases to occupy so great a part of our thoughts during the day, that he begins to appear to us in sleep. We are rather inclined to the opinion, that, as a general rule, those faculties are most in action during sleep that have been least exhausted during the day. We say, as a general rule, for it is well known that frequently the mind may be so exercised during the day, that sleep can only be obtained with the greatest difficulty at night; and in the same way particular faculties may be so excited during the day as to continue in action also in sleep; but generally a due amount of action demands a due amount of rest. But the phenomena of *D.* are yet too little studied to enable us to assert much with certainty regarding them; and in all probability they differ very much in their nature and character in different individuals. It is commonly said that nothing surprises us in our *D.* This, however, is by no means uniformly the case. We do, indeed, often

see persons that are dead, or in a distant country, or witness events that have happened long ago, in our *D.*, and feel no surprise; but sometimes, also, the idea that the person is dead or in a distant country, or that the event is a matter of history, also occurs to us; then we are surprised, and we begin to think that we are dreaming. Frequently the scenes that appear to us in our *D.* are of the wildest and most unreal description. All probabilities, and even possibilities, of time, place, and circumstance, are violated, and yet they rarely strike us as untrue or improbable. There is also in general a remarkable want of coherence in our *D.*, and a complete incongruousness in the thoughts and images that pass through our minds. Sometimes, however, the very reverse of this takes place, and the reasoning or imaginative powers may possess a strength unknown to them in their ordinary condition. Thus Condorcet saw in his *D.* the final steps of a difficult calculation that had puzzled him during the day; and Condillac states that when engaged with his *Cours d'Etude*, he frequently developed and finished a subject in his *D.*, which he had broken off before retiring to rest. The popular belief that there is something supernatural in the nature of *D.*, and that frequently in this way events are revealed that are about to happen, has been held from the earliest times, and is shared in by many well-informed persons of the present day. Many of the instances of remarkable *D.* may, doubtless, be explained from natural causes, but there are others so well authenticated that we cannot altogether discredit them, that are manifestly unexplainable by any natural means. If we admit the testimony on which these dreams are given, we are driven to confess that they arise from causes, and are subject to laws, of which we are ignorant. — It is, indeed, an interesting question, What purpose do dreams serve in the animal economy? There can be little doubt, we think, that they exert a certain influence upon the character. "Dreams," says a philologist, "are, at any rate, an exercise of the imagination. We may well conceive that one effect of them may be to increase the activity of that faculty during our waking hours; and it would be presumptuous to deny that they may not answer some purpose beyond this, in the economy of percipient and thinking beings." "If," says Pascal, "we dreamt every night the same thing, it would perhaps affect us as powerfully as the objects which we perceive every day. And if an artisan were certain of dreaming every night for twelve hours that he was a king, I am convinced that he would be almost as happy as a king who dreamt every twelve hours that he was an artisan." Hence it is of some importance to study the art of procuring pleasant *D.*, on which subject Dr. Franklin has an essay. A more accurate knowledge of the nature of *D.* would tend to illustrate many of the more obscure mental phenomena. The analogy between dreaming and insanity is very striking. There is the same wild disorder of the mental faculties, the same rapid and tumultuous thoughts, the same violent passions, common to both. In addition to the varieties of dreams mentioned there are others which appear prophetic, indicating events yet to occur, or those which are just occurring. Many instances of this kind are recorded, in some of which the event is so clearly indicated and with so much detail as to make the resemblance seem much more than a coincidence.

Dream, *v. n.*, (*imp.* or *pp.* DREAMED, or DREAMT.) [*D. dreamen.*] To have ideas or images in the mind while in the state of sleep. — To imagine; to think idly; to indulge in reverie or vagary; to allow the mind to take in illusory ideas.

"A little dream'd how nigh he was to care." — Dryden.

—*v. a.* To see, imagine, or think of in a somnolent state, or in idle, waking thoughts.

"Things . . . that are dreamt of in your philosophy." — Shaks.

To dream away, out, or through. To spend in listless inaction or idle reverie; as, to dream away one's time, to dream through a delusion.

"Why does Antony dream out his hours?" — Shaks.

Dream'er, *n.* One who dreams. — A fanciful person; a visionary; one who forms or entertains vain schemes or speculations; a man lost in wild imagination; a mope; a sluggard; as, an idle dreamer, an Utopian dreamer.

Dream'ful, *a.* Full of dreams or reveries.

Dream'iness, *n.* State of being dreamy.

Dream'ingly, *adv.* In a dreamy manner; listlessly; fancifully.

Dream'land, *n.* An imaginary region formed by the vagaries of the mind; castles in the air; Utopia.

Dream'less, *a.* Without dreams.

Dream'lessly, *adv.* In a dreamless manner.

Dream'y, *a.* Dream-like; full of dreams; relating or pertaining to dreams, or other psychological phenomena; as, a dreamy visionary.

Drear, *a.* [*A. S. dréorig*; *Ger. traurig*; *L. Ger. drüvig*; *D. drorig*.] Sad; mournful; dismal; gloomy with solitude; as, a drear wilderness.

Drear'ily, *adv.* Gloomily; dimly.

Drear'iness, *n.* Solitude; gloom; dismalness.

Drear'isome, *a.* Very dreary; desolate; gloomy.

Drear'y, *a.* [*A. S. dréorig*.] Mournful; sorrowful; dismal; oppressing, sad, and lonely; gloomy.

Drebel, CORNELIUS, a Dutch philosopher, b. at Alkmaar, 1572, whose principal work is *De Naturâ Elementorum*, 8vo. He invented the thermometer which bears his name, and is also said, although erroneously, to have been the discoverer of the microscope and telescope. D. in London, 1634.

Dredge, (*drej*), *n.* [*A. S. drage*, from *dragan*, to drag; *Fr. dréje*.] A net or drag for taking oysters, &c.; any

instrument for dragging or dredging the bottom of water. — A dredging-machine.

—*v. a.* To take, catch, or gather with a dredge; to make deeper by means of a dredging-machine; as, to dredge for oysters, to dredge a canal, &c.

Dredger, (*drej'ér*), *n.* One who fishes with a dredge. — A dredging-machine.

— A utensil used in kitchens for holding flour, &c., to sprinkle over meat while roasting; as, a salt-dredger. (Sometimes called *dredging-box*.)

Dredging-machine, *n.* (*Hydraulics*.) A machine employed for the purpose of clearing out or deepening the channels of rivers, harbors, &c. The most effectual machine is the *bucket dredging-machine*; it is in the form of a large barge with an open hold. A long stage, in the form of an inclined plane, overhangs the side of the barge, having a strong wheel at each end, working an endless chain. To this chain a series of perforated iron buckets is attached, each with a shovel-shaped steel mouth projecting on one side. The buckets, which ascend on one side of the inclined plane and descend on the other, are so contrived as to descend empty. On

Fig. 869. — DREDGING-MACHINE.

reaching the lower wheel, the shovel-shaped mouth digs into the bottom, and, as it turns round, is partially filled with rubbish, and passes upwards to the upper wheel. As it is inverted while passing over the upper wheel, it discharges its contents into the open hold of the barge. Every succeeding bucket on the endless chain continues the action, and the depth of working can be increased or decreased by changing the inclination of the framework. The more powerful dredgers, instead of emptying the buckets into their own holds, discharge them into other barges drawn up alongside. *D.-M.* are worked sometimes by steam-engines, sometimes by the action of an undershot wheel, and sometimes by horse-power, the horse moving round a circular path in the barge.

Dree, *a.* Mournful; wearisome; tedious; dismal. (*Scot.* and *Prov. Eng.*)

Dree'ite, *n.* (*Min.*) A white rhombohedral mineral, consisting chiefly of sulphate of baryta. Sp. gr. 3.2-3.4.

Dreg'iness, *n.* [*See DREGS.*] Foulness; feculence; muddiness; state of being full of dregs or lees.

Dreg'ish, *a.* Full of dregs, lees, or feculent matter; as, a dreg'ish liquor.

Dreg'gy, *a.* [*Icel. dreggiado*.] Containing dregs or lees; consisting of dregs; foul; muddy; feculent; as, a deposit of dreggy matter.

Dregs, *n. pl.* [*A. S. drig*, dry; *Ger. dreck*, dirt; *Swed. drugg*; *Icel. dregg*, sediment; allied to *Gr. trux*, *trugos*, lees of wine, from *trugo*, to dry.] The sediment of liquors; lees; grounds; feculence; any foreign matter of liquors that remains at the bottom of a vessel;—hence, any waste or worthless matter, or most vile and despicable part of; dross; sweepings; refuse; as, the dregs of society, to drain a bottle to the dregs, &c.

"The dregs and squeezings of the poet's brain." — Dryden.

Dre'ersville, in *Pennsylvania*, a post-office of Schuylkill co.

Drench, *v. a.* [*A. S. drencan*, to give to drink; *Icel. dreckia*, to immerge; *Scot. droink*, to drench. *See DRINK.*] To plunge; to immerge; to wet thoroughly; to saturate with water or other liquid; to soak; as, the rain has drenched me to the skin. — To fill with water or other liquid; to dose with drink by forcible means; to purge violently by medicine; as, to drench a horse.

—*n.* A soaking; a state of saturation by water, &c.; as, a drench of rain. — A draught; a swill; a dose of physic to be forced down the throat of either man or beast.

"Give my roan horse a drench." — Shaks.

Drench'er, *n.* One who soaks or steeps in liquid. — One who administers a drench.

Dren'on Springs, in *Kentucky*, a village of Henry county.

Dren'onsville, in *Ohio*, a P. O. of Adams co.

Drenthe, (*dreut*), a frontier province of the Netherlands, having on the E. the Hanoverian dominions, and on the other sides, the provinces of Friesland, Gröningen, and Overysse. Area, 1,028 sq. m. Desc. Flat and marshy, with a generally infertile soil. The principal employment of the population is pasturing flocks, and digging and exporting peat. Lat. between 52° 35' and 53° 12' N., Lon. between 6° 5' and 7° 5' E. Pop. 92,183.

Drepano, (*Cape*), (*drai-pa'no*). [*Lat. Drepanum*.] A promontory on the W. coast of Sicily. During the first Punic war, the Roman consul, P. Claudius Pulcher, was defeated, B. C. 249, off *D.*, in Sicily, with a loss of 93 ships, by the Carthaginian fleet. The Roman commander is said to have given battle in defiance of the augurs, and when told that the sacred chickens would not eat, exclaimed, "Let them drink!" and ordered them to be thrown into the sea.

Dres'bach City, in *Minnesota*, a post-village of Winona co., on the Mississippi River, abt. 20 m. below Winona.

Dres'den, the cap. of the kingdom of Saxony, and of the circ. of the same name, situate in a beautiful and

fertile valley, on both banks of the Elbe, 109 m. S.S.E. of Berlin, and 70 S.E. of Leipzig; Lat. 51° 6' N., Lon. 13° 44' E. The city consists of 3 divisions, two of which the *Altstadt* (old town), and the *Friedrichsstadt*, are situated on the left, while the *Neustadt* (new town) is built on the right bank of the Elbe, and connected with the former by 2 bridges, one of which is 418 feet in length. *D.* contains various imposing Protestant churches, a fine Catholic cathedral, and a splendid synagogue. Among the other prominent buildings may be mentioned the Royal Palace, the magnificent Brühl Palace, the Japanese Palace (containing the museum of antiquities, cabinet of coins, and the great public library of 400,000 volumes), the Academy of Fine Arts, the Zwinger (containing the cabinet of natural history and the historical museum), the Great Picture Gallery, the City Hall, and many other public and private palaces. There are man

Fig. 870. — ROYAL THEATRE OF DRESDEN.

educational, literary, and charitable institutions, such as the Gymnasium, the Polytechnic School, the Military Academy, the Pestalozzi Association, and several hospitals. Musical societies are here very numerous. The greatest feature of *D.* is its renowned picture gallery, one of the first in Europe, containing more than 1,600 paintings by the most celebrated Italian, German, Dutch, Flemish, and French masters, of both the ancient and modern schools. Connected with it there is a collection of over 300,000 engravings, all of the highest class. Though far behind Leipzig in commerce and manufactures, *D.* has still many important branches of industry, as porcelain, glass, jewelry, musical instruments, silks, laces, carpets, &c. The city contains nearly 30 parks, squares, and many superb monuments. Brühl Terrace forms the fashionable promenade. The Elbe is here navigable by steamboats, and railways, connect the city with Leipzig, Berlin, &c. *D.* has always been a favorite visiting place for tourists, a large proportion of whom are Americans, and contains a considerable colony of American and British residents, who occupy what are known as the English and American quarters. Here, on Aug. 26, 1813, the allied Austrian, Russian, and Prussian army, about 150,000 strong, under Prince Schwartzberg, attacked 131,000 French troops, led by Napoleon. The battle, which commenced at 4 o'clock P. M., was renewed Aug. 27, when Napoleon totally defeated his opponents. The allied army lost above 6,000 men in this battle, and Gen. Moreau, who was engaged as a volunteer, fell in the conflict. The French loss amounted to 4,000 men. Pop. (1895) 299,484.

Dresden, in *Illinois*, a village of Grundy co., on the Illinois river, about 52 m. S.W. of Chicago.

Dresden, in *Indiana*, a post-office of Green co., about 10 m. S.S.W. of Indianapolis.

Dresden, in *Iowa*, a thriving township of Chickasaw county.

— A village of Poweshiek co., about 10 m. E. of Montezuma.

Dresden, in *Maine*, a post-town of Lincoln co., on the Kennebec river, about 15 m. S. by W. of Augusta. Pop. (1897) abt. 1,125.

Dresden, in *Missouri*, a village of Perry co., about 10 m. S. by E. of St. Louis.

— A post-village of Pettis co., about 71 m. W. of Jefferson City.

Dresden, in *New York*, a post-township of Washington co., between lakes George and Champlain, about 20 m. N.N.E. of Sandy Hill.

— A village of Yates co., on Seneca Lake, about 7 m. E. of Penn Yan.

Dresden, in *Ohio*, a post-village of Jefferson township, Muskingum co., on the Muskingum River, about 68 m. E. by N. of Columbus.

Dresden, in *Tennessee*, a post-village, cap. of Weakley co., about 120 m. W. of Nashville.

Dresden, in *Texas*, a post-village of Navarro co., about 150 m. N.N.E. of Austin City.

Dresden, (*Circle of*). *See SAXONY*, (KINGDOM OF SAXONY).

Dresden Mills, in *Maine*, a post-office of Lincoln county.

Dress, *v. a.* (*imp.* or *pp.* DRESSED or DREST.) [*Fr. dresser*; *It. dirizzare*; *Lat. dirigo*. *See DIRECT.*] To direct or arrange; to put in proper order; to adjust; to set right; to trim; to prepare; to get ready; as, to dress a wound, to dress cloth, to dress a lamp, to dress a slain animal, to dress a dinner, to dress a garden, &c. — To curry, comb, and comb; as, to dress a horse. — To put the body in order, or in a suitable condition, as, to dress the hair. — To put on clothes; to put on rich garments; to attire;

to apparel; to clothe; to accoutre; to array; to trim; to deck; to adorn; to embellish.

(Mil.) To make straight; to form troops in a straight line, and at proper distance; as, to *dress* the ranks.

(Naut.) To place in gala order; to decorate with bunting; as, to *dress* a ship.

(Man.) To break in or teach a horse.

(Mach.) To trim to the requisite dimension; to finish off work.

To *dress up* or *out*, to dress with care, elaboration, or ostentation; as, *dressed out* for a ball.

—*v. n.* To put on clothes; to be clothed; to pay particular regard to dress or appearance; as, a well-dressed man.

(Mil.) To arrange in a straight line, as troops.

—*n.* That which is used as the covering or ornament of the body; apparel; raiment; clothing; clothes; vestments; attire; habit; accoutrements. — A lady's gown; as, a silk *dress*. — Habit of ceremony; fine clothes; sumptuous attire; as, "full *dress* creates dignity." — *Richardson*. — Skill in devising or adjusting dress, or the practice of wearing elegant apparel; as, the art of *dress*. — "Men of pleasure, *dress*, and gallantry." — *Pope*.

(Hist.) All ancient nations seem to have had the same costume, formed of long garments, without much shape or ornament; and as these were all much alike, they descended from father to son for many generations. The colors most valued among the ancients appear to have been purple, red, and violet; but white was the most used by the Israelites. The costumes of the early Greeks were remarkable for their close fit, loose flowing garments being of later introduction. Among the Romans, the *toga*, q. v., a dress derived from the Etruscans, was the characteristic costume; and although discouraged by Augustus (B. C. 27—A. D. 14), and Domitian (81—96), it maintained its popularity till the removal of the seat of government to Constantinople in 330, when it was superseded by the Greek *pallium*, q. v. When the Romans conquered Western Europe, they of course introduced their costume, which was successively modified and diversified, according to the taste peculiar to every country. From the beginning of the 14th century, fashion began to travel northward from Italy through Paris to London. — To attempt in the limits of this work a history *seriatim* of modern dress, in its endless variety of modes, would be to record the history of human folly. At all times, mankind would seem to have exhausted its powers of invention in devising costumes to lend transformation, and even deformity, to the natural beauty and harmony of the human frame. Fashion has in all ages proved itself the arbiter of society, and is of all things that which it is, perhaps, most difficult to the psychologist to account for. It may be said of fashion, as it often is of love, that it disposes us to see perfections in the object of our admiration, which, when wanting, excites a correlative lack of enthusiasm. If we look only to the mode of

a secondary consideration, which can safely be left to woman's artistic sense. In this direction the use of the bicycle must be taken into account. This has already had a marked effect on the dress of many men and women, and may eventually cause general modifications in modes of dress.

Dresselville, in *Minnesota*, a P. O. of Le Sueur co.

Dress'er, *n.* One who dresses; one who is employed in trimming, preparing, and adjusting; as, an actress's *dresser*, a *dresser* of vegetables in a kitchen, &c. — A table or bench on which meat and other things are dressed and prepared for use. — An article of furniture consisting of a long table with drawers, and supporting a rack for plates, pewter dishes, &c.; as, a kitchen-*dresser*.

Dress'erville, in *New York*, a P. O. of Cayuga co.

Dressing, *n.* Act of one who dresses.

(Agric.) Compost, or manure distributed over land; as, a top-dressing.

(Cookery.) Force-meat; stuffing for meats.

(Dom. Econ.) A term applied to gum, starch, and other articles used in stiffening or preparing silk, linen, and other fabrics.

(Med.) The methodical application of any remedy or apparatus to a diseased part. Also, the remedy or apparatus itself.

—*pl.* (Arch.) All kinds of mouldings beyond the naked walls or ceilings are called by the general name of dressings. In joinery, it is a term applied to the architraves or other appendages of apertures.

Dressing-case, *n.* A case or box containing articles and appliances for the toilet.

Dressing-gown, *n.* A loose robe, or long gown, used by a person during the operation of dressing, or while engaged in study.

Dressing-room, *n.* An apartment appropriated to the toilet of the person.

Dressing-table, *n.* A toilet-table.

Dress-maker, *n.* A maker of gowns for females; a mantua-maker; a seamstress.

Dress'y, *a.* Showy in dress; wearing rich or fashionable apparel; as, a *dressy* woman.

Drest, *pp.* of *DRESS*, *q. v.*

Dreul, (*drül*) *v. n.* See *DRUOL*.

Drenx, (*droo*), a town of France, dep. Eure et Loire, on the Blaise, 20 m. N.N.W. from Chartres. Near it, in 1562, was fought a severe action between the Catholics and the Calvinists, in which the Prince de Condé was taken prisoner. It is also the birthplace of Philidor, the great chess-player. *Pop.* 7,748.

Drew, SAMUEL, an English Methodist preacher, b. at St. Austell, Cornwall, 1765. He is celebrated for his *Essay on the Immateriality and Immortality of the Soul*. D. 1897.

Drew, *imp.* of *DRAW*, *q. v.*

Drew, in *Arkansas*, a S.E. co. *Area*, abt. 900 sq. m. *Rivers*, Bayou Bartholomew, and Saline River. *Surface*, level. *Soil*, fertile. *Cap.* Monticello.

Drew'sburg, in *Indiana*, a P. O. of Franklin co.

Drew'sville, in *Virginia*, a village of Southampton co., abt. 75 m. S.S.E. of Richmond.

Drew'sville, in *New Hampshire*, a post-village of Cheshire co., on the Connecticut River, abt. 45 m. W.S.W. of Concord.

Drey, *Dray*, *n.* A squirrel's nest.

Dreyse, JOHANN NICOLAS VON, (*drizä*), a German inventor, b. at Sommerda, 1788. He is chiefly known as the inventor of the celebrated NEEDLE-GUN, *q. v.* D. 1867.

Drey Springs, in *Alabama*, a former post-office of Montgomery co.

Drib, *v. a.* To crop; to cut off by degrees; to defalcate.

"He who drives (merchants') bargains *drips* a part." — *Dryden*.

—To entice or coax to something, step by step.

"With daily lies she *drips* thee into cost." — *Dryden*.

—*v. n.* To shoot at a mark or target, at short paces.

Dribber, *n.* One who dribbs; a marksman at short paces.

Dribble, *v. n.* [Dimin. of *drip*.] To fall in drops, or small drops, or in a quick succession of drops; as, the *dribbling* of water. — To fall weakly or slowly; as, the "*dribbling* dart of love." (*Shaks.*) — To slaver at the mouth as a child or idiot.

—*v. a.* To throw down in drops.

"Let the soup *dribble* all the way up-stairs." — *Swift*.

Drib'let, *Drib'let*, *n.* [From *dribble*.] A very small drop; a small piece or part; odd money in a sum; as, to make up an amount in *driblets*.

Drier, *n.* That which has the power of drying; a desiccating; as, the sun is a *drier* of earth.

(Painting.) A substance mixed with oils used by painters, to give them the property of drying quickly. (Sometimes called *patent dryer*.)

Drift, *n.* [A. S. *drifan*, to drive; Dan. *drift*. See *DRIVE*.] That which is driven by wind or water; a heap of any matter driven together; as, a *drift* of ice, *sea-drift*, a *drift* of sand. — A driving; a force impelling or urging forward; impulse; main force; propulsive influence; as, the *drift* of passion. — Course of anything; direction; inclination; as, the *drift* of the wind. — Aim; scope; design; tendency of an act, method, course of policy, manner of conduct, &c.; as, the *drift* of an argument.

"The style, the manner, and the *drift*." — *Swift*.

—A drove, herd, flock, covey, &c., as of domestic animals, birds, &c.; as, a *drift* of cattle.

(Mach.) A piece of hardened steel, notched at the sides, and made slightly tapering; it is used for enlarging a hole in a piece of metal to a particular size by being driven into it.

(Arch.) The horizontal force which an arch exerts

with a tendency to overset the piers from which it springs.

(Geol.) A name given to the *boulder-clay*, a deposit of the Pleistocene epoch. More fully, it is called the *Northern Drift*, *Glacial Drift*, or *Diluvial Drift*, in allusion to its supposed origin. For an account of the formation, see *BOULDER-CLAY*, and *GLACIAL DRIFT*. — *Drift-wood* and *Sand-drift* are, respectively, wood carried down by rivers, and driven by tides and currents to distant shores; and sand driven and accumulated by the wind.

(Mining.) See *DRIFT-WAY*.

(Naut.) The course or direction of a sea-current. See *DRIFT-CURRENT*. — The distance to which a ship diverges from her proper course, owing to currents, contrary winds, &c.; as, to make *leeway drift*. — (*pl.*) Those parts in the sheer draught of a ship, where the rails are cut off and ended with a scroll. Pieces fitted to form the drifts bear the name of *drift-pieces*.

(Ship-building.) A term applied by shipwrights to the discrepancy between the size of a bolt and that of the hole intended to receive it; also, to the difference between the circumference of a mast, and that of the hoop required to fit it.

(Mil.) An instrument used to drive down the charge in a rocket, or other pyrotechnic agent.

—*v. n.* To move along like anything driven; as, to be *drifted* into a difficulty. — To float or be driven along by a current of water, &c.; as, to *drift* astern. (Said of a ship.) — To accumulate in heaps by the force of wind and weather, as sand, snow, &c.

(Mining.) To prospect for ores; to make a search for metallic veins, or lodes.

—*v. a.* To drive or cause to form into heaps; as, a sirocco *drifts* sand in the desert.

—*a.* Movable by the action of winds or currents; as, *drift* ice.

Drift-bolt, *n.* A bolt used to force out other bolts.

Drift Current, *n.* (*Geog.*) A marine current which owes its origin to steady winds, blowing almost constantly towards one quarter, and with nearly equal velocity. In the Atlantic the trade winds cause such currents, but only between the latitude within which these winds generally blow. The mean velocity of such currents is rarely more than ten miles per day, nor do they extend far below the surface. In the Pacific, the *D. C.* produced first by the winds from the antarctic ice towards the equator, and afterwards those crossing the ocean in warm latitudes, are believed to produce the stream current running out from the Indian Ocean round the Cape of Good Hope, and ultimately crossing the Atlantic. Other *D. C.* less steady and constant, are occasionally and seasonally produced by prevailing winds. The *D. C.* of the tropical Atlantic, flowing from the vicinity of Africa, impinge on the coast of South America, where they are divided by Cape St. Roque, a minor part flowing south, but the great bulk of the current flowing north into the West Indian archipelago and the Gulf of Mexico, whence it emerges around Southern Florida as the Gulf Stream (*q. v.*). In the Pacific a similar great *D. C.* gives origin to the Kuri Siwo or Japan Current, while a south flowing portion of it forms the East Australian Current. Another *D. C.*, in the Indian Ocean, yields the Mozambique Current, flowing between Madagascar and Africa. See *CURRENTS*, *OCEANIC*.

Drift-sail, *n.* (*Naut.*) A sail used in heavy weather to prevent a ship's drift; it is placed under water beneath the stern or counter, and being towed by the vessel, serves to keep her steady, head to sea.

Drift-way, *n.* A way or passage for the admission of cattle into a corral or enclosure.

(Naut.) See *DRIFT*.

(Mining.) A passage cut under the earth from shaft to shaft.

Drift-wind, *n.* A drifting, driving wind.

Drift-wood, *n.* Wood drifting on the surface of water.

Drift'wood, in *Indiana*, a township of Jackson co.; *pop.* about 800.

Driftwood Creek, in *Pennsylvania*, a branch of Sinnemahoning Creek, which it enters in Potter co.

Drift'y, *a.* Full of drifts; liable to form into drifts, as sand, &c.

Drill, *v. a.* [A. S. *thrilian*; Ger. and Du. *drillen*; Dan. *drille*; Lat. *terebro*, to bore; Gr. *teiro*, to rub away, to turn, the latter being accounted for by the rotatory movement of a drill in piercing a hole. See *THRILL* and *TWIRL*.] To bore, perforate, or penetrate by a vibratory motion, or by turning round an instrument; specifically, to pierce with a drill; as, to *drill* a hole through an armor-plate.

"My body through and through he *drill'd*." — *Hudibras*.

—To drain; to draw through slowly.

(Agric.) To sow grain in rows, drills, or channels.

—To form into drills or rows like soldiers arranged in lines; as, to *drill* a class of scholars. — To procrastinate; to delay or exhaust by slow progress.

(Mil.) To teach soldiers their proper movements, such as turning to the right, left, &c., and the right use of their weapons; to teach and train raw levies of troops to their duty by frequent exercise; — hence, to instruct and discipline any persons by repeated exercise or repetition of acts.

—*v. n.* To sow in drills; as, to *drill* a furrow. — To flow gently.

(Mil.) To muster for exercise, as troops.

Drill, *n.* (*Agric.*) A machine for sowing agricultural seeds in rows. The term *drill* is also frequently applied to a row of drilled crops, as a *drill* of potatoes, corn, or turnips. In all countries in which Indian corn is grown, the principle of drilling has been long known and acted

Dandy.

Dandizette.

Fig. 871.

(From a caricature of 1821.)

ress worn by our fathers some 80 years ago, as exemplified in Fig. 871—which is, it is true, a caricature of the style of dandyism then in vogue, but not a very great exaggeration of the *à la mode* costume of the time—one feels a disposition to laugh at what appears to our eyes so absurd an exhibition; but we cannot but lapse into gravity when we think that, from the earliest times to the present, men have been accustomed to ride the foibles and follies of their ancestors, without themselves becoming wiser. In regard to the dress of men and women, it is important to take into consideration that the former has been mainly governed in its development by the sense of utility and personal comfort, the latter very largely by that of beauty; the result being that changes in the male dress have been gradual and rarely extreme, while those in female dress, through the influence of false conceptions of the beautiful, have been frequent and radical. It is of interest to perceive at a glance is coming over this through the dress-form movement now in vogue, and through a broader conception of what constitutes beauty in dress. The reformers are mainly concerned with the question of utility in woman's dress, beauty being with them a

upon. In gardening it has been practised everywhere from time immemorial; but its extension to field-culture is comparatively of recent date. The crops which are now most generally drilled, are clover, flax, cereals, beans, peas, potatoes, turnips, beet-root, cole-seed, and carrots. Of these, clover and flax are sown in drills at about 3 or 4 inches apart; cereals from 6 to 10 inches; and beans, potatoes, and turnips at from 25 to 28 inches apart; the general rule, however, with most green crops, being that the space between the rows should admit of the passage of a light plough or hoe, drawn by a horse, without danger to the plants. A great variety of drills are now in use; but that formed on the principle of lifting the grain in small cups, which empty themselves into tin tubes, by which the grain is conducted to the coulters (Fig. 872), is the most generally adopted; but when the soil is uneven, a lighter machine should be used.

Fig. 872. — DRILL.

(Mach.) A tool used for boring holes in wood, metal, stone, bones, &c. It is formed in different ways, according to the kind of hole it is required to make, and the material which it has to penetrate. Drills for boring iron have pointed heads, with sharp edges projecting from them, that cut in different directions. Those for boring wood are like an auger or large gimlet, or they are broad and flat, with a projecting spike in the centre, and cutting-edges on either side: drills of this form are called *centre-bits*. These tools are worked by a rotary motion, imparted to them by a cranked handle, having a socket and spring at one end to receive and hold the drill, and a boss at the other, against which the workman presses his chest; or by a bow of steel, with a strong piece of catgut attached to it loosely enough to admit of its being passed once or twice round a pulley, through the centre of which the tool passes. The workman presses the drill against the material that he is boring by his chest, which is protected by a plate of metal. — A *drilling-machine* or *press*, an apparatus (fig. 873) comprising a combination of drills, employed for cutting circular holes in metal. (Called, also, *vertical*, *horizontal*, or *universal drill*.)

Fig. 873. — IMPROVED DRILLING-MACHINE.

(Mil.) The general name given to the exercises by which a soldier is qualified for his duty. *Squad*, or *setting-up drill*, teaches him how to march in slow, quick, and double time, to go through his facings, and to perform certain simple evolutions from the halt, or when marching. These are combined with posture exercises, called *extension motions*, which tend to give the soldier a good carriage, and an erect military figure. When the recruit is dismissed from squad drill, which is taught to small batches or squads of men by a sergeant appointed for the purpose, he learns *company drill*, the *manual* and *platoon exercise*, and *position drill*; he is then competent to go through a course of *battalion drill* in concert with the other companies of the regiment to which he belongs, and to proceed to *aiming drill*, *judging-distance drill*, and *target practice*. In every regiment every soldier goes through a course of setting-

up drill. The course of drill for each arm of the service is similar, as far as the elementary part is concerned; but the artilleryman has to acquire a knowledge of gun-drill, and the trooper must learn his drill on horseback, and the sword-exercise. *Punishment drill* is an extra quantity of drill assigned to a soldier for some minor fault, which he has to go through in heavy marching order.

(Zool.) See BABOON.

Drill-barrow, *n.* (Agric.) An appliance used in drilling furrows, by depositing the seed or grain.

Drill-bow, *n.* A small bow used in turning a drill.

Drill-box, *n.* (Agric.) A box holding the seed for drilling.

Drill-harrow, *n.* (Agric.) A harrow used in drilling.

Drill-husbandry, *n.* (Agric.) The art or practice of sowing seeds in drills or rows.

Drilling, *n.* Act or art of boring holes or of sowing seeds with a drill. — Act of training soldiers to their duty. — See DRILL.

(Manuf.) A kind of heavy, coarse linen or cotton fabric, used for men's clothing, &c. (Sometimes written *drill*, or *drills*.)

Drilling-machine, *n.* See DRILL.

Drill-plough, *n.* See DRILL.

Drill-sergeant, (*sir'jent*), *n.* (Mil.) A non-commissioned army-officer, who teaches and trains soldiers to their duty. (Sometimes called *drill-instructor*.)

Drill-stock, *n.* (Mech.) An apparatus for holding and turning a drill.

Drims, *n.* [Gr. *drimus*, acid.] (Bot.) A genus of plants, order *Magnoliaceae*. The bark, which is commonly known under the name of *Winter's bark*, is obtained from a species of this genus, namely, *D. Winteri* or *aromatica*. Is native of S. America. It was formerly much used as a substitute for cinnamon, having similar aromatic and stimulant properties; at present it is rarely employed. It is sometimes confounded with *canella bark*, which has been termed *spurious Winter's bark*.

Drin, a large river of European Turkey, rising in Albania, and which, after a course of 100 m., falls into the Adriatic, 4 m. from Alessio. It was formerly the boundary between the E. and W. Empires.

— Another, in European Turkey, separates Bosnia from Servia, and, after a course of 180 m., empties into the Save, 60 m. from Belgrade.

Drink, *v. n.* (imp. DRANK, old spelling DRUNK; *pp.* DRUNK or DRANK, old form DRUNKEN: the latter is sometimes still used adjectively.) [A. S. *drincan*; Ger. *trinken*; Goth. *driglan*; Fr. *trinquier*; It. *trincare*, to carouse.] To quench one's thirst; to swallow any liquid for assuaging thirst, or other purpose. — To indulge in spirituous or other potent liquors to excess; to be an habitual drunkard; to be intemperate in the use of wine, &c.; to tope; to carouse; to fuddle; to tiddle. — To feast; to be entertained with liquors.

"To-day it is our pleasure to be drunk." — Fielding.

To *drink to*. To salute in drinking; to toast; to hobnob.

"Let the toast pass; *drink to the lass*;
"I'll warrant she'll prove an excuse for the glass." — Sheridan.

— *v. a.* To swallow, as liquids; to receive, as a fluid into the stomach; to imbibe; as, to *drink champagne*. — To take or suck in, as a liquid; to absorb; to imbibe. — To take in by any inlet of the mind or senses; to hear; to see.

"I *drink* delicious poison from thy eye." — Pope.

— To take in air; to inspire; to inhale; as, to *drink the sea-breeze*.

To *drink down*. To act on, mollify, or subdue, by drinking.

"Come, gentlemen, I hope we shall *drink down* all unkindness." — Shaks.

To *drink up*, or *off*. To quaff the whole at a draught; to empty one's glass; as, *drink up your glass*, let us *drink off* and go. — To *drink the health of*. To drink to the health and welfare of; to pledge; to toast; to express good-will by drinking; as, to *drink the health of the President*.

— *n.* Liquid to be swallowed; any fluid to be taken into the stomach; beverage; potion; — in contradistinction to *meat*.

(Med.) Any liquid substances, warm or cold, taken to quench thirst, as a diluent, a beverage, or as a potion. Though water is the natural beverage of mankind, and the article to which, in sickness, wounds, and suffering, all turn with eager yearning, yet, in health and strength, how few out of the millions in civilized life resort to it for comfort or refreshment. If we except the country, where it may be said that the unsophisticated beverage is the favorite drink, we see this healthful fluid, which assimilates with the blood, and carries to the system many of the most important principles, generally repudiated, and that for hurtful and adulterated liquors, which, if they do not always engender disease, in almost every case increase the illness, and seriously derange the vital faculties. Such drinks as are employed for stimulating purposes, whether made with wine, spirits, or alcohol, or malt liquors, not strictly used as medicinal agents, will be examined under their proper names, and under the general head SPIRITUOUS LIQUORS. The remainder may be divided into *Beverage* and *Drink*. Of the first of these, such as tea, coffee, chocolate, and cocoa, each is so intimately connected with the dietetic system of every-day life, and their mode of preparation, and qualities are so intimately known to all, that it is quite enough to name them in this article. — The class of drinks form a most important subject in medical practice, and are not simply adjuncts to medicine, but

in all cases *important agents*, and, in many, absolute remedies. Medicinal drinks are divided into those prepared by *boiling*, and those obtained by *infusion*. *Bilents*, obtained by boiling, or, as they were anciently called, *ptisans*, are by far the most numerous and useful as some of them are not only simply watery beverages meant to allay heat and quench the thirst, but may be made both to abate fever and supply the system with more or less of nutriment. Drinks supplying a portion of nourishment are such as those made by boiling a spoonful of pearl-barley, and a small piece of orange peel, with a little sugar, in three or four pints of water for about half an hour, straining the liquor, and, when cold, giving from half a cup to half a tumblerful as often as required. Oatmeal, rice, sago, semolina, grits, or flour may be used for the same purpose, except that the powdered substances are to be first mixed into a thin paste with cold water, and made like gruel, by pouring the mixed ingredient into the water, boiling and constantly stirring the mixture for the few minutes requisite to cook it sufficiently. — Gruel, whether made with flour, oatmeal, or barley-grits, either alone, sweetened, or flavored, or made medicinal by means of acids, comes equally under the denomination of *ptisans*, or *drinks*. The consistency or thickness of each drink must be proportioned to the disease for which it is given. With simple barley-water, without flavor or sweetness, is required, as in cases of fever, or hemorrhage of blood from the lungs or stomach, the drink may be made perfectly medicinal by adding about half a drachm of powdered nitre to each pint for the first class of disease, and the addition of one and a half drachms of the elixir of vitriol, or of half a drachm of diluted nitric acid, each pint of the barley-water, for the latter. — Sometimes the drinks are purely medicinal, as in the decoction of marsh-mallows, dandelion, woody nightshade or dumara, broom, and some others. In these cases the roots are washed, cut small, put on in cold water, and boiled for a sufficient time to extract their virtues. — Among the articles chiefly used for drinks made by infusion are hyssop, balm, mint, pennyroyal, sage, fennel, wood, rue, camomile, and many others. As the object in giving drinks of this nature is both to quench the heat and allay heat, by a slight action on the skin, and the same time leave a grateful aromatic taste in the patient's mouth, care must be taken not to make the infusion too strong by adding too much. Water is frequently and earnestly craved for by the patient, should never be refused, though care should be taken to have it first boiled, and then set aside, that all impurities may subside. If this precaution is taken the advantages obtained from distilled water will be secured, and a wholesome beverage procured for the invalid, which, by the addition of a little syrup of orange, or *capillaire*, the expressed juice of blackberries or currants, may be converted into a grateful, aromatic, and cooling drink. — The French are in the habit of using wormwood, and other stomachic cordials, mixed with water, as an ordinary summer drink.

Drinkable, *a.* That may be drunk; potable; adapted or suitable as a beverage; as, *drinkable water*.

— *n.* A beverage, or liquor for drinking; as, *eatables and drinkables*.

Drink'ableness, *n.* State or quality of being drinkable.

Drink'er, *n.* One who drinks or imbibes; particularly a person who is in the habit of drinking ardent liquors to excess; a tippler; a drunkard; a fiddler; a sot; a heavy drinker.

"Great drinkers commonly die apoplectic." — Arbuthnot.

Drink'ing Usages, *n. pl.* (Hist.) From the earliest times of remote antiquity there have always been special usages connected with the custom of drinking. Among the ancient Hebrews, the drink-offering constituted one of the most solemn parts of their religious ceremonies, and consisted of a small quantity of wine, part of which was to be poured on the sacrifice or offering, and the remainder given to the priests. The patriarch Jacob poured out a drink-offering on the pillar of stones which he had erected to mark the place where he had talked with God. (Gen. xxxv. 14.) In the 15th chapter of Numbers there are special directions for the pouring out of drink-offerings of wine, the burnt-offerings, to be "a sweet savour unto the Lord." Among the ancient Greeks and Romans, the pouring out of libations to the gods was an ordinary religious ceremony. They were not only offered before solemn prayers, but also before meals. In the latter case, the host, before the guests began to eat, poured a small quantity of wine upon the floor, as a sort of propitiation to the gods. This practice was somewhat equivalent to our grace before the meat. It was the custom at times to drink to the health of the guests. From usages such as these, in after-time, arose the custom of proposing healths or giving utterance to sentiments before drinking at a feast. Among the Scandinavians, Teutons, and ancient Britons, such usages were customary at their boisterous carousals. The Anglo-Saxons were in the habit of crying "*Was hal*" (health) before drinking. Wassail is evidently derived from this origin; but it is attributed by some to a circumstance said to have taken place between Rowena, daughter of Hengist, and the British king Vortigern. The king was at an entertainment at the castle of Hengist, and, during a feast, lost his heart to the Rowena, who, kneeling gracefully before him, presented a cup of wine, saying, "*Liever kyning, wassail*" (dear king, your health). The *was hal* of the Scandinavians was, however, in use before that time, and was equivalent to the "*Your health*" of the present day. The practice of pledging a guest before drinking arose in

a necessity of showing that there was no poison in the wine, or that there was no danger to the guest while he drank. It originated in the 10th cent. The introduction of Christianity did not at all contribute to abolish the practice of using the wassail cup. It began, on

Fig. 874. — DRINKING WASSAIL.
(From a rare print by Josias English, 1656.)

the contrary, to assume a religious aspect; and in the larger monasteries, among the monks of old, the wassail bowl was placed at the right hand of the abbot in the refectory. It was handed round to each, and was called *Poculum Charitatis*. In the English universities a similar cup is still passed round, called the *grace cup*. In the dinners given by the public companies of the city of London, after the cloth has been removed, the Master and wardens rise, and "drink to their visitors in a loving cup, and bid them all heartily welcome!" A silver cup filled with warm spiced wine is then handed round to all present. Some of the drinking-cups belonging to the priesthood in the Middle Ages were of the most costly workmanship. That of Thomas à Becket is still preserved; it is made of ivory, mounted with silver, and studded on the summit and base with pearls. Round the cup is an inscription, "Vinum tuum bibe cum gaudio" (drink thy wine with joy); but round the lid, deeply engraved, is the restraining injunction "Sobrii estote" (be moderate). The word *toast*, with regard to drinking usages, is comparatively modern; it originated in the practice of putting a piece of toast in a jug of ale. According to "The Tatler," the word *toast* was first applied to the drinking of healths at Bath, in the reign of Charles II. A celebrated beauty of the time was in the large public bath, and a number of her admirers were standing around. One of them took a glass of water from the bath and drank to her health; while another, who was standing by, half tipsy, offered to bump in, saying, that, although he objected to the liquor, he would like to have the toast. From that time the word was applied to drinking the health of any beauty at private parties, and, in time, all sorts of subjects were toasted at public and private feasts. Toasts also began to be accompanied by cheers: and at the present day, at large public banquets, toast-masters are generally appointed, who not only give out the subject of the toast, but lead the cheers which follow. Many drinking usages are connected with domestic events, and seem to have been handed down from ancient times. The custom of drinking at births, christenings, and marriages can easily be accounted for; but the strangest usage of all is the practice of drinking at funerals. The wakes held in Ireland and some parts of Scotland have been long maintained, and are still kept up by habit. They probably owed their origin to the want of excitement among the phlegmatic northern nations, and the long dark nights in a cheerless climate.

ink'less, a. Without drink.

ink'-money, n. Money given to buy liquor for drinking one's health; allowance of money for liquid refreshment; — hence, a trifling gratuity or donceur.

Peg's servants are always asking for *drink-money*. — *Arbutnot.*

ink'-offering, n. (Script.) See DRINKING USAGES.

ip, v. n. [A. S. *drypan*, *dripan*, *dripan*. See DROPP.] To fall in drops; to trickle; as, tears *drip* down her cheeks. — To have drops of liquid to fall; to cause obduracy of moisture to run and drop; as, a *dripping* umbrella.

a. To let fall in drops; as, *dripping* rain.

(Cookery.) See BASTE.

A falling in drops, or that which falls in drops.

"Drops the light *drip* of the suspended oar." — *Byron.*

the melted fat which falls from meat while roasting; generally called *dripping*.)

(Arch.) The projecting edge of a moulding channelled beneath, so that the rain will *drip* from it; (the "corona" the Italian architect;) the edge of a roof; the eaves.

(Law.) The right of drip is an easement by which the water which falls on one house is allowed to fall

upon the land of another. Unless the owner has acquired the right by grant or prescription, he has no right so to construct his house as to let the water drip over his neighbor's land.

Dripping, n. That which falls in drops; specifically, the fat which falls from meat while roasting.

"For candles how she trucks her *dripping*." — *Swift.*

Dripping-pan, n. An iron or tin pan used for receiving the dripping fat from meat roasting at a fire.

Drip-stone, n. A filtering stone.

(Arch.) A projecting tablet or moulding over the heads of doorways, windows, archways, niches, &c. (Called also *label*, *weather-moulding*, and *water-table*.)

Drive, v. a. [Imp. *DROVE*, formerly *DRAVE*; pp. *DRIVEN*.] [A. S. *drifan*; Ger. *treiben*; O. Ger. *triban*; Dan. *drive*; allied to Sansk. *dru*, to run, to flow on the ground.] To impel or cause to run forward by force; to move by physical force; to compel or force along; to impel; to hurry on; to push forward; as, to *drive* a horse, to *drive* a nail, to *drive* into the street, &c.

"And the *driving* is like the *driving* of Jehu, . . . for he *driveth* furiously." — 2 Kings ix. 20.

— To chase; to hunt; to pursue; to urge toward a snare, trap, corral, or inclosure; as, "to *drive* the deer with hound and horn." (*Cherry Chase*.) — To impel a team of horses or oxen to move forward, and to direct their course; to guide or regulate a carriage drawn by horses, mules, &c.; to impel to greater speed; as, to *drive* four-in-hand, to *drive* deer, to *drive* a buggy, to *drive* a person home, &c.

"Who *drives* fat oxen, should himself be fat." — *Dr. Johnson.*

— To force to move on; to hurry forward inconsiderately; to distress; to constrain; to straiten; to impel by the influence of passion; as, *driven* to beg by necessity, to *drive* one mad.

"This kind of speech is in the manner of desperate men far *driven*." — *Spenser.*

— To carry on; to keep in motion; to prosecute; to follow as an occupation or business; as, to *drive* a good trade, to *drive* a bargain. — To clear by forcing away the contents of.

"To *drive* the country, force the swains away." — *Dryden.*

— To purify and collect by the rapid motion of an air-current; as, to *drive* feathers. — To urge; to press to a conclusion, by moral influence; as, to *drive* an argument home. — To conduct; to take charge of; to set and regulate the speed or course of; as, to *drive* an engine.

(Mining.) To dig a horizontal gallery in a mine.

— *v. n.* To be forced or caused to run along; to be impelled; to be moved by any physical agency or force; as, a ship *drives* before the wind. — To rush and press with violence; to move with resistless force; as, troops *driving* back a mob, a *driving* storm.

"Thick as autumnal leaves, or *driving* sand." — *Pope.*

— To pass or proceed in a carriage; as, to *drive* furiously. To aim at or tend to; to urge toward a point; to make an effort to reach or obtain, as an object or end; — preceding at or to.

"We are come within view of the end we have been *driving* at." — *Addison.*

To *drive* at, or let *drive* at, to strike at with force; to aim and deliver a blow with vigor.

"Four rogues in buckram let *drive* at me." — *Shaks.*

— *n.* An excursion for exercise, business, or pleasure, taken in a carriage; — in contradistinction to *ride*, or exercise taken on horseback. — A course on which carriages are driven; a way set apart for the use of carriages; as the *Drive* in Hyde Park, London.

Drivel, v. n. [Icel. *drafa*; Dan. *dræve*, to speak obscenely; to draw.] To drawl; to talk idly; to mutter indistinctly; to be weak or foolish; to dote.

"A *drivelling* hero, fit for a romance." — *Dryden.*

— To slaver; to let the spittle fall in drops like a child, an idiot, or an old man in his dotage; as, "a *drivelling* old fellow."

— *n.* Slaver; saliva flowing from the mouth. — Senseless talk; nonsense; unmeaning utterance.

Driveller, n. An idiot; a fool; a slubberer; a slaverer.

Driven, n. (Mech.) That part of machinery which is set in motion by a driver. (Sometimes called *follower*.)

Driver, n. One who drives; the person or thing that urges or compels any other person or thing to move forward; as, an engine-driver.

(Naut.) The foremost spur in the bilge-ways, the heel of which is fayed to the fore side of the foremost

Fig. 875. — a, THE DRIVER.

poppet, and the sides placed to look fore-and-aft in a ship. — The name of the gaff-sail set on the mizen-mast of a ship of three masts, or on the main-mast of a smaller vessel. A boom, called the *driver-boom*, extends the foot of the sail a good way over the stern, like a cutter's mainsail.

(Cooking.) An iron instrument used in driving down the iron hoops of a cask.

(Mach.) The bent piece of iron fixed in the centre chuck, and projecting over it to meet the carrier and drive it forward.

Driver-ant, n. (Zool.) A species of ant. See FORMICIDÆ.

Driving, p. a. Having great impulsive force; as, a *driving* tale. — Impelling; forced violently forward.

Driving-axle, n. (Mach.) The axle of a driving-wheel.

Driving-box, n. (Mach.) The journal-box of a driving-axle.

Driving-note, n. (Mus.) A name applied to such notes as connect the last note of one bar with the first of the following one, so as to make only one note of both. They are also used in the middle of a measure, and when a note of one part terminates in the middle of the note of another; in this case it is called *binding* or *ligature*.

Driving-shaft, n. (Mach.) Any shaft which gives motion to another shaft.

Driving-springs, n. pl. (Mach.) The springs fixed upon the boxes of the driving-axle of a locomotive-engine, to support the weight and to deaden the shocks caused by irregularities in the rails.

Driving-wheels, n. pl. (Mach.) The wheel which communicates the motion to the pinion, or the second wheel deriving its motion from the first, which may either be a multiplying or diminishing wheel according to the necessities of the case. — The name of *driving-wheels* is also given to the large wheels of a locomotive-engine, which are fixed upon the crank-axle or main shaft of the engine.

Drizzle, (dri'z'l.) v. n. [A. S. *dreosan*, to fall.] To fall, as water from the clouds, in very fine particles; to rain in small drops; as, a *drizzling* shower.

— *v. a.* To shed in small drops or particles.

"When the sun sets, the air doth *drizzle* dew." — *Shaks.*

— *n.* A small, thin rain.

Drizzly, adv. Shedding small rain, or small particles of sleet or snow; as, "Winter's *drizzly* rain."

Droger, Drogher, n. (Naut.) A cargo-boat for transporting heavy burdens; a large kind of lighter.

Drogheda, (droh'he-da,) a sea-port town of Leinster, in the cos. of Meath and Louth, Ireland, on the Boyne River, abt. 4 m. from its mouth. It has an elegant Roman Catholic cathedral, and many other fine public buildings. *Manf.* Linen and cotton goods, leather, machinery, ship-building, &c.

Drogman, Drogoman, n. See DRAGOMAN.

Drohobice, or DROHOBICZ, a town of Austrian Poland, in Galicia, 18 m. from Sambor.

Droit, n. [Fr.] Right; title; privilege; jurisdiction; custom.

(Law.) In French law, the whole body of law, written and unwritten. They say: to study *le Droit*, as we say to study law.

Droits of Admiralty, n. pl. (International Law.) Rights claimed by the government over the property of an enemy. In England, it has been usual, in maritime wars, for the government to seize and condemn, as *Droits of Admiralty*, the property of an enemy found in her ports at the breaking out of hostilities.

Droitwich, (droit'ij,) a town of England, co. of Worcester, 7 m. from Worcester city, and noted for its salt manufacture. *Pop.* 6,086.

Droitzeška, (droish'ská,) n. See DROSKY.

Droll, a. [Fr. *drôle*, facetious, comical; Du. and Ger. *drollig*, odd, funny, said to be from Dan. *troll*, a goblin, a gnome; Icel. *tról*, a giant.] Causing mirth or laughter; comical; odd; facetious; merry; queer; farcical; wagish; laughable; ludicrous; nonsensical; as, a *droll* story.

— *n.* One who makes it his occupation to perform odd and diverting tricks; a buffoon; a jester; a mountebank; a merry-audrew. — Something exhibited to excite mirth; a farce; a puppet, or the like; as a "*Smithfield droll*."

— *v. n.* To jest; to act farcically; to play the buffoon.

"Men that will not be reasoned into their senses, may yet be laughed or *drolled* into them." — *L'Estrange.*

Drollery, n. [Fr. *drôlerie*.] Sportive tricks; buffoonery; comical stories; gestures, tricks, manners, or antics exhibited to raise mirth: jocular sport.

"The rich *drollery* of 'She Stoops to Conquer.'" — *Macaulay.*

Drollingly, adv. In a comical and facetious manner.

Drollish, a. Somewhat droll or comical.

Drôme, (drôme,) a river of France, rising in the Val-Drome in the Upper Alps; after flowing 60 m., it joins the Rhone 12 m. from Valence.

— A S.E. dep. of France, having N. and E. Isère, E. the Hautes and Basses Alpes, S. Vaucluse, and W. Ardèche, from which it is separated by the Rhone. *Area.* 2,519 sq. m. *Rivers,* the Rhone, the Isère, and the Drôme, the latter not navigable. *Soil,* about 100,000 hectares of fertile land, the rest indifferent. *Surface,* generally mountainous. *Prod.* Silk and grapes. *Min.* Iron, coal, copper, lead, granite and marble. *Lat.* between 44° 9' and 45° 20' N., *Lon.* between 4° 38' and 5° 45' E.

Dromedarius, n. [Gr. *dromos*, a race, and *therion*, a beast.] (*Pal.*) A genus of fossil mammalia, which has been described by Dr. Emmons, from the coal-fields of N. Carolina. It appears to have been insectivorous, and nearly allied to *Spalacotherium*.

Dromedary, (*drom'e-da-rē*), *n.* [Fr. *dromadaire*; Gr. *dromos*, *dromados*, running from the old verb *drāmō*, to run, and *kamelos*. See CAMEL.] See CAMEL.

Dromia, *n.* (Zool.) A genus of Crustaceans, somewhat allied to *Dorippe* (q. v.), and of which *D. vulgaris*, the sponge-crab, is furnished with two sharp-pointed claws, which enable it to hold fast to pieces of sponge, medusæ, &c., under which it conceals itself.

Dromore, a town and parish of Ireland, co. Down, on the Lagan, 15 m. from Belfast; pop. of par. 13,200, of town 1,900.

—A par. in co. Tyrone, pop. 8,000. —The name of several villages in the cos. Sligo and Clare, Ireland.

Drone, *n.* [A.S. *dran*, *dræn*; Ger. *drohne*; Dan. *drone*; Gael. *dranudan*, a humming, as of bees; formed from the sound.] The male or non-working bee, so called from the grave buzzing sound it utters. See BEE.

—An idler; one who earns nothing by his own industry; a lazy fellow; a sluggard.

“They live like *drones* upon the public cost.” —Dryden.

—A humming, or low deep sound.

(Mus.) The largest tube of the bagpipe, which emits a continued deep note. (Called also *drone-pipe*.)

—*v. n.* To live in idleness; to dream away one's time listlessly.

“A long, restive race of *droning* kings.” —Dryden.

—To give a low, heavy, deep tone or sound; as, the “cynical's *droning* sound.” —Dryden.

Drone-bee, *n.* (Zool.) See DRONE.

Drone-pipe, *n.* (Mus.) See DRONE.

Dron'go, *n.* (Zool.) See SHRIKE.

Dron'ish, *a.* Idle; sluggish; like a drone; indolent; lazy; listless; as, “*dronish* monks.” —Rowe.

Dron'ishly, *adv.* In a *dronish* manner.

Dron'ishness, *n.* State or condition of being *dronish*.

Dron'theim, in Norway. See TRONDHEIM.

Dron'y, *a.* Like a drone; *dronish*; idle; sluggish.

Drool, *v. n.* To salivate at the mouth; as, a *drooling* baby.

Droop, *v. n.* [Icel. *driupa*, to be sad; A.S. *drepe*, violent death.] To sink or hang down; to lean downward, as a body that is weak or languishing; as, a *drooping* flower. —To languish or pine from grief or other cause; to faint; to grow weak, or become dispirited; as, *drooping* courage. —To decline; to fall or sink downward.

“Our day's work lies laborious till day *droop*.” —Milton.

Droop'er, *n.* One who, or that which, droops or languishes.

Droop'ingly, *adv.* In a *drooping* manner.

Droop Mountain, in Greenbrier co., W. Virginia. An engagement occurred here, Nov. 6, 1862, when — on being attacked by a force of 5,000 Union troops under Gen. Averill — the Confederate Gen. W. S. Jackson retreated, with a loss of 300 men and 3 guns. National loss, about 100.

Drop, *n.* [A.S. *dropa*; D. *drop*; Icel. *dropi*. See the verb.] A small portion of any fluid in a spherical form, which hangs down, or which falls at once from any body; or a globe of any fluid which is pendent, as if about to fall; a small portion of water hanging in rain; as, a *drop* of water, a *drop* of blood. —Anything resembling a liquid drop, as a pendent diamond, an ear-ring, a glass globe upon a chandelier, a transparent sugar-plum, &c.

“The *drops* to thee, Brillante, we consign.” —Pope.

—A very small or minute quantity of liquor; as, a *drop* of absinthe. —The part of a gallows which sustains the criminal before he is executed, and which is suddenly dropped from under him.

(Arch.) An ornament of a column of the Doric order, representing *drops*, or little balls under the triglyph.

(Naut.) The midship depth of a sail, from head to foot.

(Mach.) The distance of a shaft from the base of a hanger. —Webster.

(Dram.) The curtain which drops between the proscenium and the stage of a theatre. See DROP-SCENE.

(Mach.) A machine for lowering heavy weights. See CRANE.

(Med.) A division of liquid measure, sixty drops being equal to one fluid drachm. As drops vary in bulk, and consequently in strength, according to the nature of the fluid, when dropped from the mouth of a bottle, it is customary to measure the number of drops ordered, when they are called *minims*.

—*v. a.* [A.S. *dropian*; Ger. *tropfen*; Dan. *dryppe*; O. Ger. *trufan*, to distil.] To cause to flow or run in small globules, as a fluid; to distil; as, to *drop* a tear. —To let fall, as any substance; to cause to descend suddenly, like a drop; as, to *drop* an anchor, to *drop* a tear, to *drop* a courtesy. —To let go; to dismiss from association; to lay aside; to quit; to leave; as, to *drop* an acquaintance, to *drop* pursuit. —To utter slightly, briefly, or casually; to insert indirectly, incidentally, or by way of digression; as, to *drop* a hint, or word of advice. —To leave; to set aside; to dismiss from possession; to send; to set down and quit; as, to *drop* a passenger, to *drop* a letter in the post-office, to *drop* a line to a friend, &c. —To lower; to let down; to end; as, to *drop* a curtain. —To variegate; to speckle; to be dropped; as, “waved coats *dropp'd* with gold.” —Milton.

—*v. n.* To run or flow in small globules or drops, as a liquid; to distil.

“The tears *dropt* gently from her eyes.” —Jerrold.

—To let drops fall; to discharge itself in drops. —To descend suddenly or abruptly, as over-ripe fruit.

“*Dropt* from the zenith like a falling star.” —Milton.

—To die, or to die suddenly or instantaneously; as, he *dropped* dead. —To cease; to finish; to conclude; to come to an end, or to nothing; as, the matter finally *dropped*. —To fall short of a mark; to overshoot; as, to

drop wide of the target. —To call or come unexpectedly or without anticipation; preceding in or into; as, some friends have just *dropped in*. —To fall lower; to be depressed; as, the sentry *dropped* the muzzle of his musket.

(Naut.) To be deep in extent, as a sail.

To *drop astern*, to fall behind; to move toward or behind the stern of a ship; as, the pilot-boat *dropped* astern. —To *drop anchor*. See ANCHOR. —To *drop down*, to move or sail down; as, we *dropped down* the river with the ebb.

Drop'ax, *n.* (Med.) A plaster, or anything to take off the hair; a depilatory. —Ash.

Drop'let, *n.* A little drop.

Drop'letter, *n.* A letter dropped into the post-office receiving-box for delivery in the same town in which it is posted.

Drop'per, *n.* The person or thing that drops.

(Mining.) A vein which branches, or drops off, from the principal lode.

Drop'ping-bottle, *n.* Same as EDULCORATOR, q. v.

Drop'ping-fire, *n.* (Mil.) An incessant, irregular discharge of musketry.

Drop'pingly, *adv.* In drops; by drops, or small globules.

Drop'ping-tube, *n.* A glass tube having a bulb blown into it, and so constructed as to deliver by drops any fluid with which it is filled.

Drop-press, **Drop-hammer**, *n.* (Mach.) A machine used for stamping, punching, or embossing.

Drop-scene, *n.* (Dram.) In theatres, &c., the painted curtain which drops between the proscenium and the stage, between the intervals, and at the close, of a play, or dramatic representation.

Drop Serene, *n.* (Med.) See AMAUROSIS.

Drop'sical, *a.* Diseased with dropsy; predisposed to dropsy; as, a *drop'sical* person. —Pertaining to, or partaking of the nature of dropsy; as, *drop'sical* symptoms.

Drop'sicalness, *n.* State or condition of being afflicted with dropsy.

Drop'stone, *n.* Spar having the form of drops.

Drop'sy, *n.* [Fr. *hydropisie*; Lat. *hydrops*; Gr. *hydrōps*—*hydōr*, water, and *ōps*, aspect.] (Med.) A disease characterized by the accumulation of watery fluid in one or more shut cavities of the body, or in the areolar tissue, or in both independent of inflammation. In a state of health, the capillaries, which ramify every part of the body, constantly pour out upon every surface, into the most minute cells as well as the great cavities, a watery fluid to moisten the parts, and thereby facilitate motion and prevent injury from friction. This watery fluid is speedily taken up by another class of vessels, called the *absorbents*, which carry it back to the general circulation.

When the healthy condition of these organs is impaired, either from the exhalants acting too powerfully, or from the absorbents being deficient in action, an accumulation of fluids takes place, either in the general cellular membrane or in the natural cavities of the body. *D.* is either *active* or *passive*. Active or acute *D.* is owing to excessive action of the exhalants, in consequence of increased action of the heart; it comes on suddenly and tumultuously, and sometimes can scarcely be discriminated from inflammation with serous effusion. It is induced by various causes; as exposure to a cold moist atmosphere, particularly when the body is in a state of perspiration from active exercise or long exposure to heat. *Chronic* or *passive D.* is occasioned by defective absorption, arising, in some measure, perhaps, from an enfeebled state of the absorbents, strictly and anatomically so called, but more frequently, chiefly, and in some cases entirely, from undue fullness of the veins; this venous repletion being produced almost always by some impediment to the free return of the blood to the heart; as tumors pressing on the great blood-vessels, ossification of the valves of the heart, &c. When the veins are distended to a certain degree with watery fluid, the entrance of more of the same fluid through their sides is impeded or prevented; and when the distention is still greater, the aqueous part of the blood may even pass in the other direction out of the vessel. The difference between active and passive *D.* is chiefly in the rate at which the collection augments; in the one case the liquid is rapidly effused in quantity much beyond the natural amount of exhalation, in the other the exhalation goes on as usual, but the fluid exhaled is not taken back again into the circulating vessels with sufficient facility. Wherever there is a shut sac, or wherever there is a loose and permeable areolar tissue, there we may have *D.* There are certain parts, however, where it is more generally met with than in others, and is hence distinguished by particular names; thus, when in the head, *hydrocephalus*; in the chest, *hydrothorax*; in the belly, *ascites*; in the areolar tissue generally throughout the body, *anasarca*. When the areolar tissue of a part becomes drop'sical, it is said to be *œdematous*.

In the treatment of this disease, the first object is to get rid of the preternatural accumulation of watery fluid; the second, to prevent its collecting again; for *D.* is generally a symptom or sequence of other disorders, and rarely a disease itself. In active or febrile *anasarca*, general blood-letting is often of great advantage, as it not only helps to relieve the congestion upon which the effusion depends, but it tends to abate the undue action of the heart; in other cases, however, blood-letting would be very injurious, from its enfeebling the patient; and as it frequently occurs from weakness, or living on poor or unwholesome food, the treatment must consist of a generous diet, with tonics. In general the object is to augment the discharge of watery fluid from one or more of the secreting surfaces of the body; and it is often a matter of great nicety to determine by what surface or channel this ought to be attempted. In some

cases it is best to seek to promote this discharge by way of the kidneys; in others, by the mucous lining of the alimentary canal; in others, by the external skin. Sometimes great present relief is afforded to the patient by tapping; but it is generally only temporary, and only sometimes be resorted to.

(Bot.) A disease in succulent plants, from an excess of water.

Drop-table, *n.* (Mach.) A machine used for removing the wheels of locomotive-engines.

Drop-tin, *n.* (Metall.) A sort of fine tin.

Drop-wort, *n.* (Bot.) See ENANTHE.

Drosch'ke, *n.* Same as DROSKY, q. v.

Drosera, *n.* (Bot.) The typical genus of the order *Droseraceæ*, q. v.

Droseraceæ, *n.* [Gr. *droseros*, dewy, from the dew-like secretion.] (Bot.) The Sun-dew family, an order of plants, alliance *Berberales*. —DIAG. Regular symmetrical flowers, parietal placenta, and stamens alternate with the petals, or twice as many. They are bog-marsh plants, found in all parts of the world except the Arctic regions. They possess slightly acid and acrid properties. The species of the typical gen. *Drosera* the Sun-dew, are interesting, from the peculiar irritability of the hairs on their leaves. The plant commonly known as Venn's Fly-trap is a species of *Dionaea*, other genus of this order, and exhibits in a most striking manner this irritability. (See DIONEÆ.) Some of the sun-dews communicate a beautiful purple stain to the paper upon which they are dried, and also yield yellow color when treated with ammonia. They may therefore, be expected to furnish valuable dyes, and should be examined with this view by the practical chemist. The order includes 7 genera and 90 species.

Dros'ky, **Droschke**, **Droitsschka**, *n.* [Rus. *droitschka*.] A low, four-wheeled vehicle without top, used by the Russians.

Drosom'eter, *n.* [Fr. *drosomètre*, from Gr. *dro*, dew, and *metron*, measure.] (Physics.) Any instrument for measuring the quantity of dew that collects on the surface of a body exposed to the open air during the night.

Dross, *n.* [A.S. *dross*, from *dreosan*, to perish.] Excrement, scum, or despumation of metals thrown in process of fusion. —Rust or incrustation formed on the surface of metals by oxidation. —Refuse; debris; waste matter; worthless remains of anything; impurities or sweepings.

“Treasures and all gain esteem as *dross*.” —Milton.

Dross'iness, *n.* State of being *drossy*; rust; foulness; impurity.

Dross'less, *a.* Without *dross* or impurity.

Dross'y, *a.* Like *dross*; pertaining to or containing *dross*; abounding with scoriaceous matter; worthless; foul; impure.

“So doth the fire the *drossy* gold refine.” —Davies.

Drought, **Drouth**, (*drouth*), *n.* [Contracted from A.S. *drugothe*, from *drigan*, to dry. See DRY.] Diness; want of rain or of water, particularly dryness of the weather; aridity; long continuance of dry weather. —“Torrents in the *drought* of summer fail.” —Sandys.

—Dryness of the throat and mouth; thirst; parchedness; want of drink.

“His carcass pin'd with hunger and with *drought*.” —Milton.

—Lack; want; scarcity; destitution; as, a *drought* of talent.

Drought'iness, *n.* State of dryness of the weather; want of rain.

Drought'y, *a.* Dry, as the weather; arid; in want of rain; as, a *droughty* country. —Thirsty; parched; dry; needing drink.

Dronth, *n.* See DROUGHT.

Dronyn de Lhuys, EDOUARD, (*dron'awng*), (*luece*), a French statesman, b. at Paris, 1805. He was elected deputy in 1842, and was one of the most energetic of those who combined to overthrow M. Guizot in 1847.

In the first cabinet of Louis Napoleon, after he became president, Dronyn de Lhuys was appointed foreign minister, and acquitted himself with considerable ability in those difficult times. He was afterwards sent as ambassador to England, and, subsequently, in 1852, became again foreign minister, addressed to the various powers despatches announcing the establishment of the empire under Napoleon III. During the dispute between Turkey and Russia, his endeavors for peace were strenuously exerted. He took part in the conference at Vienna in 1855, and, on their breaking up without any result, resigned his office. In 1863 he was recalled to his old post, and was minister of Foreign Affairs during the Dano-German war, and resigned again in 1866. He is a senator, and decorated with the grand cross of the Legion d'Honneur. D. March 20, 1881.

Drove, *imp.* of DRIVE, q. v.

Drove, *n.* [A.S. *draf*, from *drifan*, to drive. See DRIVE.] A collection of cattle driven; a number of animals driven in a body; as, a *drove* of sheep. —Any collection of animals of the brute creation, moving or being driven.

“The sounds and seas with all their finny *drove*.” —Milton.

—A concourse of people in a state of motion; as, a *drove* of visitors. —In England, a road upon which cattle are driven.

(Agric.) A narrow channel for draining land.

Drov'er, *n.* One who drives animals, particularly cattle and sheep, to market; also, one whose business is to purchase live-stock, and drive them to market for others.

Drown, *v. a.* [A.S. *adrencean*; Dan. *drukne*; Ger. *ertrinken*, from the root of *drink* or *drench*.] To drink, sink, plunge, or immerse in water; to immerse; to overwhelm in water; to submerge; to deluge; to inundate.

“Dew the sovereign flow'r, and *drown* the weeds.” —Shakespeare.

—To extinguish life by immersion in water, or other fluid; to suspend animation by submersion. —To plunge and lose in anything; to overwhelm; to stifle; to overpower.

"He drownd his cares in sparkling wine." — *Sir C. Sedley*.

—To overcome; to overpower, as sound.

"My voice is drownd amid the senate." — *Addison*.

—*r. n.* To be suffocated in water, or other fluid; to perish by submersion in water.

"O Lord, methought, what pain it was to drownd!" — *Shaks.*

Drown'er, n. He who, or that which, drowns.

Drown'ing, n. (Med.) The suffocation produced by the immersion of the body under water, or, according to some, by the exclusion of atmospheric air from the lungs by any liquid. The necessity of air to life is well known, and any exclusion of it, even for a few minutes, produces death. When a human being unable to swim falls into the water, if it is not of a great depth, he first goes to the bottom; but on account of the air in the lungs rendering the specific gravity of the body lighter than the water, he immediately rises to the surface. The efforts made by him to maintain himself at the surface diminish the quantity of air in the lungs, and he again sinks to the bottom, but soon rises again; and this alternate rising and sinking may occur several times in succession. The air expelled from the lungs is seen to rise to the surface in the form of bubbles, and with every expiration the specific gravity of the body is increased; the powers of sensation and voluntary motion rapidly diminish, and the body settles at the bottom. A feeble motion may still be perceived in the chest for a short time, but that, too, ceases, and death ensues. In *D.*, death is effected by the impure condition of the blood. The impure or venous blood of the system is constantly being carried to the lungs, where, being brought into contact with the air, its impurities are carried off, and it is converted into pure or arterial blood. When, by any means, as in *D.*, the lungs are shut out from communication with the external air, this operation cannot be carried on, impure instead of pure blood is carried through the system, the brain is immediately affected, sensation and volition rapidly diminish, and at length cease. The period during which life may continue in submersion varies in different persons. In some instances bodies submerged but one minute have been found to be lifeless; and in many cases recovery has taken place after a submersion of eight or ten minutes. Occasionally, animation has been restored after a submersion of 15 or 20 minutes, or even of half an hour. In general, if the body has not been in the water longer than from 5 to 5 minutes, the prompt use of the proper means will restore animation. When the body is recovered after *D.*, the skin is cold and pale, presenting sometimes patches of livid discoloration. The expression is usually placid, the eyes half closed, the pupils dilated, the tongue swollen and pressed forward, and the lips and nostrils covered with a mucous froth. The fingers are sometimes found torn and abraded, and the hand grasping gravel or other substances, which have been seized in a convulsive struggle at the bottom of the water. Internally, the epiglottis is found to be raised; bloody foam appears in the windpipe and bronchial passages; the lungs are soft and distended; a large quantity of black, fluid blood is collected in the right, and less in the left cavity of the heart; and the vessels of the brain are swelled and filled with impure blood. The following plan of treating a drownded person is generally found to be the best. I. Treat the patient instantly, on the spot, in the open air, except in severe weather, freely exposing the face, neck, and chest to the breeze. 2. Send with all speed for medical aid and for articles of clothing, blankets, &c. 3. Place the patient gently on the face, with one arm under the forehead, so that any fluids may flow from the throat and mouth, and without loss of time. — I. to excite respiration. 4. Turn the patient on his side, and, a, apply snuff or other irritants to the nostrils; b, dash cold water in the face, previously rubbed briskly until it is warm. If there be no success, again lose no time, but II. to imitate respiration. 5. Replace the patient on his face (when the tongue will then fall forward, and leave the entrance into the windpipe free); then, 6, turn the body gently but completely, on the side and a little beyond (when inspiration will occur), and then on the face, making gentle pressure along the back, when expiration will take place alternately. These measures must be repeated deliberately, efficiently, and perseveringly, 15 times in the minute only. Meanwhile, III. to induce circulation and warmth, continuing these measures: 7. Rub the limbs upwards with a firm pressure and with energy, using handkerchiefs, &c., for towels. 8. Replace the patient's wet clothing by such other covering as can be instantly procured, each bystander supplying a coat, waistcoat, &c. These rules are founded on physiology and comprise all that can be done immediately for the patient, excluding all apparatus, galvanism, the warm bath, &c., as useless, not to say injurious, especially the last of these, and all loss of time in removal, &c., as fatal.

Drowse, v. n. [*Belg. droosen*, to be sleepy; *A. S. drowsan*.] To nod slumberously; to doze; to sleep imperfectly or unsoundly; to be heavy or spent with disposition to sleep; to be heavy or dull.

"They rather drows'd, and hung their eyelids down." — *Shaks.*

—*r. a.* To make heavy with sleep; to cause to be dull or stupid.

—*n.* A doze; a short slumber; a slight sleep.

Drows'head, n. Drowsiness; predisposition to sleep.

Drows'ily, adv. Sleepily; heavily; sluggishly; in a dull, stupid manner; idly; slothfully.

Drows'iness, n. Heaviness with sleep; inclination to slumber; disposition to sleep; sluggishness; laziness.

"Drowsiness shall clothe a man with rags." — *Prov. xxiii. 21.*

Drowsy, a. Heavy with want of sleep; inclined to sleep; dozy; lethargic; somnolent; as, a drowsy congregation.

"Drowsy murmurs lull'd the gentle maid." — *Addison*.

—Lulling; soporific; conducing to sleep.

"Drowsy am I, and yet can rarely sleep." — *Shaks.*

—Heavy; dull; stupid; sluggish; as, drowsy reasoning.

Drub, v. a. [*A. S. drepan*.] To beat or strike with a stick; to thrash; to cudgel; as, to meet with a drubbing.

—*n.* A blow with a stick or cudgel; a thump; a knock.

Drubbing, n. A beating; a flogging.

Drudge, v. n. [*From A. S. droogan*, pp. of *drogen*, to do, to work.] To work hard; to labor in mean offices; to labor with toil and fatigue.

—*r. a.* To consume tediously or laboriously.

—*n.* One who works hard, or labors with toil and fatigue; one who labors hard in servile employment; a slave; a menial.

Drudge-horse, n. A horse used for hard work.

Drudge'r, n. A mean laborer; a drudge. — A dredging-box; a dredger.

Drudgery, n. Hard labor; toilsome work; ignoble toil; hard work in servile occupations.

"That dry drudgery at the desk's dead wood." — *C. Lamb*.

Drudgingly, adv. With labor and fatigue; laboriously.

Drug, n. [*A. S. drig, dryg, dry*; *Fr. drogue*; *It. droga*.] A name applied to all articles used for medicinal purposes, though the term should, perhaps, be strictly confined to what are called simples, balsams, gums, resins, and exotic products used as medicaments in a dry state.

—An article of slow sale, or in no demand in the market.

—*r. a.* To prescribe or administer drugs or medicines; to season with drugs or ingredients; to tincture with something offensive; to dose to excess with drugs or medicines.

Drug'et, n. [*Fr. droguet*.] (*Com.*) A coarse and flimsy woollen texture, chiefly used for covering carpets. It was formerly extensively employed as an article of clothing by the poorer classes, more especially of females; but this and similar fabrics are now almost wholly superseded by cotton goods, which induce greater cleanliness, and are less liable to retain infections and contagious poisons.

Drug'gist, n. [*Fr. droguiste*.] One who deals in drugs; properly, one whose occupation is merely to buy and sell drugs, without compounding or preparation.

Dru'id, n. [*Fr. druide*; *Gael. druïdh*, a sorcerer, a Druid; *W. derwydd*, from *deru*, or *derwen*; *Gr. drys*, an oak.] (*Hist.*) A name given to the order of priests which existed in ancient times among certain branches of the Celtic race, if not among all. Various writers have endeavored to establish a connection between the *D.* and some of the other early heathen sects. Some argue that the Druidical and Persian religions were identical; others regard them as connected with the Hindoos; others with the Egyptians, and so on. They only became known in history about the first century before Christ, and they were then chiefly found in Gaul and Britain. Julius Caesar is the ancient author who has given the clearest and most minute account of them. According to him they formed one of the two orders of rank and dignity in Gaul. They were engaged in things sacred, conducting the public and the private sacrifices, and interpreting all matters of religion. They were held in great honor among the people, and a number of young men resorted to them for the purpose of instruction. They determined almost all controversies, public and private; decreed rewards and punishments; and if any one did not submit to their decision, they interdicted him from the sacrifices, which, among them, was the most heavy punishment, such persons being shunned by all, and deprived of all civil rights and privileges. Among the *D.* there was one who possessed supreme authority over them, who was either elected by the suffrages of the others, or, if pre-eminent in dignity among the rest, was at once elected. They assembled at a fixed period of the year, in a consecrated place in the territories of the Carnutes, which is reckoned the central region of the whole of Gaul; and hither all who had disputes assembled from every part, and submitted to their decrees and determinations. They did not go to war or pay tribute like the rest, being exempted from military service, and having a dispensation in all matters. They learned by heart a great number of verses, for they regarded it unlawful to commit these to writing; and hence, some remained in training for 20 years. In almost all other matters in their public and private transactions, they used Greek characters. One of their leading tenets was, that the souls do not become extinct, but pass, after death, from one body to another; and they thought that men, by this tenet, are in a great degree excited to valor, the fear of death being disregarded. They likewise discussed and imparted to the youth many things respecting the stars and their motion; respecting the extent of the world and of our earth, the nature of things, and the power and the majesty of the immortal gods. This institution is supposed to have come from Britain; and even now those who desire to gain a more accurate knowledge of that system, generally proceed thither for the purpose of studying it. As to the amount of knowledge possessed by the *D.*, we have little means of determining. They unquestionably, however, possessed some knowledge of the heavenly bodies beyond what simply pertained to the regu-

lation of their religious festivals, inasmuch as they computed the yearly lunations, which supposes an acquaintance also with the solar year; and various relics have been found in Ireland, among Druidical remains, which are thought to be astronomical instruments designed to show the phases of the moon. At the same time, there was not a little of astrology, divination, and magic mixed up with their purer science. In their doctrine of medicine particularly, there was far more of superstition than of knowledge. To a great many plants they attributed a sacred, mystic character. The oak was especially regarded as sacred among them, and in the oak-groves they frequently performed their rites, deriving, according to some, their name from the oak. Most sacred of all, however, was the mistletoe, which they esteemed as an antidote to all poisons, a cure for all diseases. It was gathered at certain seasons, with the most formal and pompous ceremonies. According to Pliny, as soon as it was discovered upon the oak, the *D.* collected in crowds about the tree; a priest in white vestments ascended, and, with a knife of gold, cut the mistletoe, which was received by another standing on the ground; sacrifices were offered up, and the day spent in rejoicings. There were certain other plants which were regarded as potent remedies for various diseases, and were carried about as charms, as well as amber beads, which the *D.* manufactured for warriors in battle, and which are still found in their tombs. A still more powerful talisman was, according to Pliny, the serpent's egg. It was formed, he says, by the poisonous spittle of a great many serpents twined together. It was gathered by moonlight, and afterwards worn in the bosom. Their profounder ceremonies, those which they celebrated in the depths of the oak-forests or of secluded caves, are known to us only through the most vague traditions, and in the stupendous but dilapidated stone monuments which still exist in some parts of France and Britain. It is said that human sacrifices

Fig. 575. — DRUIDICAL SACRIFICE.

were frequently offered up upon their altars. They consisted of three distinct classes — the bards, the vates or prophets, and the priests proper. The bards were poets, not only of a religious, but also of a martial and satirical class. The vates were the diviners or revealers of the future, who were charged with the conduct of sacrifices and other external ceremonies, and who stood as mediators or interpreters between the people and the higher order of priests. These dwelt in the depths of the oak-forests, cultivating the more secret and mystic doctrines of their faith. They exercised judicial functions, and were resorted to in great numbers by the youth for instruction. When Gaul was subdued by the Romans, the Druidical religion gradually retired before the classic heathenism, and, step by step, withdrew at first into Armorica, and then into Great Britain, where, in the time of Nero, it was attacked, and mostly suppressed. It lingered as a public worship longest in the island of Anglesea, whence it was finally driven out by the Roman troops, amid a great deal of slaughter. Nevertheless it continued, as a superstitious belief, to hold sway for many years thereafter over the minds of the Celtic tribes and their descendants.

Dru'idess, n. A female Druid.

Druid'ic, Druid'ical, Druid'ish, a. Pertaining to, or after the manner of, the Druids.

Druidism, n. The system of religion, philosophy, and instruction taught by the Druids; or their doctrines, rites, and ceremonies — See DRUID.

Druids, Order of. A secret society in the U. States and in England, not differing essentially in their aspirations from similar societies. They are most numerous in Philadelphia, Baltimore, and New York. Their number in the U. S. is estimated (1897) at 15,000.

Drum, *n.* [A.S. *dream*; Ger. *trommel*; Icel. *thruma*, thunder.] (*Mus.*) An instrument of percussion, formed by stretching a piece of parchment over each end of a cylinder formed of thin wood, or over the top of a cauldron-shaped vessel of brass; the latter is hence called a *kettle-drum*. The large drums which are beaten at each end are called *double-drums*, and are used chiefly in military bands. Small drums, hanging by the side of the drummers, and beaten with great rapidity, are called *side-drums*. Kettle-drums are always used in pairs; one of which is tuned to the key-note, the other to the fifth of the key. The drum is principally used for military purposes, especially for exciting the soldiers under the fatigue of march or in battle. The drum is supposed to be an Eastern invention, and to have been brought into Europe by the Arabians, or perhaps by the Moors. The

Fig. 876.—EASTERN MUSICAL INSTRUMENTS.
1, Drum; 2, Bells; 3, Triangle; 4, Cymbals.

kettle-drum, the bass-drum, and tambourine are common in the East, and they are probably all included in the Hebrew name *Toph*.

(*Mil.*) One who plays the drum in a military band; a drummer.

(*Anat.*) The tympanum of the ear; the hollow part of the ear behind the tympanum. See *TYMPANUM*, and *EAR*.

(*Mach.*) A hollow cylinder fixed on a shaft, for driving another shaft by a leather or gutta-percha band.

(*Arch.*) The upright part under or above a cupola.—The same term is sometimes applied to the solid part or vase of the Corinthian and Composite capitals.

—A small cylindrical box, in which fruit, &c. is packed; as, a *drum* of figs.—A fashionable assembly; a rout.

“Not unaptly styled a *drum*, from the noise and emptiness of the entertainment.”—*Smollett*.

(*Zool.*) See *POGONIAS*.

—*v. n.* To beat a drum with sticks; to beat or play a tune on a drum; as, to *drum* a tattoo.—To beat with the fingers, as with drumsticks.—To beat with a pulsatory motion; to throb, as the heart.

“Now, heart, take rest . . . for thou shalt *drum* no more.” *Dryden*.

—To go about seeking to enlist men;—preceding *for*; as, *drumming* for recruits.

—*v. a.* To expel with beat of drum; to assemble by beat of drum;—with *out* or *up*; as, to *drum out* a man from the ranks, to *drum up* customers.

Drum'ble, *v. n.* To be sluggish; to go about anything confusedly or awkwardly.

Drum'fish, *n.* See *POGONIAS*.

Drum'head, *n.* The upper part of a drum.

(*Naut.*) The circular head of a capstan, containing holes for receiving the capstan-bars.

Drum'head Court-martial, *n.* (*Mil.*) A court-martial is so called in England when the council of officers is convoked in haste to punish any soldier who has committed an offence which requires to be dealt with in a summary manner. The big drum was formerly used as a table, round which the officers composing the council assembled; whence the name.

Drum-major, *n.* (*Mil.*) The chief or first drummer of a regiment.

Drummer, *n.* One who drums; a person who beats a drum in military exercises, marching, &c.—A commercial traveller; a bag-man; one who solicits orders for goods.

(*Zool.*) A species of cockroach found in the West Indies, and so named from its habit of keeping up a continual knocking noise during the night. They are said to attack people when asleep; and this is probably correct, since they have been seen to prey on the extremities of the dead. See *BLATTIDÆ*.

Drum'mond, CAPTAIN THOMAS, an English engineer, b. at Edinburgh, 1797, chiefly known for the invention of the Drummond light, called also *Lime-light*, and of a heliostat much employed in surveying. D. 1840.—See *LIME-LIGHT*, and *HELIOSTAT*.

Drum'mond, SIR WILLIAM, a Scottish poet, b. in 1585. His sonnets are the best specimens of his Muse, although even in them one looks in vain for sustained harmony or great originality of thought. D. 1649.

Drum'mond, a central co. of prov. of Quebec. *Area*, abt. 1,644 sq. m. It is watered by the St. Lawrence River. *Cap.* Drummondville.

Drum'mond's Island, the most W. of the Manitoulin Islands, in Lake Huron, abt. 30 m. E. of Mackinaw. It is abt. 20 m. in length from E. to W., by 10 m. in width. It belongs to Chippewa co., Michigan.

Drum'mond Lake. See *DISMAL SWAMP*.

Drum'mond Town. See *ACCOMAC COURT-HOUSE*.

Drum'mondville, a village of prov. of Ontario, Welland co., on the Niagara River, near its Falls, abt. 24 m. N.N.W. of Buffalo, N. Y.

Drum'mondville, a village of prov. of Quebec, Drummond co., on the St. Francis River, about 90 m. S.S.W. of Quebec.

Dru'more, in Pennsylvania, a township of Lancaster co.

Dru'm's, in Pennsylvania, a post-office of Luzerne co.

Dru'm'stick, *n.* The stick with which a drum is beaten, or a stick shaped for the purpose of beating a drum.

—The thigh of a fowl; as, a *drumstick*, broiled and devilled.

Dru'uk, *a.* [From *DRINK*, *q. v.*] Soaked with liquor or liquid; as, “arrows *drunk* with blood.” *Deut.* xxxii. 42.

—Intoxicated; inebriated by ardent liquor; tipsy; fuddled.

“Gloriously *drunk*, obey th' important call.”—*Cowper*.

Drunk'ard, *n.* One addicted to strong drink; any person given to an excessive indulgence in ardent liquors; one who is habitually or frequently intoxicated by drink.

Drunken, (*drunk'n.*) *a.* Intoxicated; inebriated with strong liquor; given to drunkenness; intemperate in drinking.

“They reel and stagger like a *drunken* man.”—*Ps.* cvii. 27.

—Drenched or saturated with liquor or moisture.

“Then let the earth be *drunken* with our blood.”—*Shaks.*

—Proceeding from intoxication; caused from over-indulgence in strong drink.

“The *drunken* quarrels of a rake.”—*Swift*.

Drunk'enly, *adv.* In an intoxicated or drunken manner; as, “*drunkently* caroused.”—*Shaks.*

Drunk'eness, *n.* State of being drunk through the agency of strong liquors; intoxication; inebriety; habitual inebriety, or intemperance in drinking.

(*Med.*) The habitual use of ardent spirits, or malt liquor, is the parent of more diseases than ever sprung from rotten fens or Levantine contagion. How many of those organic diseases, that form so large a portion of the mortuary list of the present day, are to be traced directly to this vice! And how many others have, through the same cause, become hereditary taints, that doubly punish the offender by the suffering he has to witness in his children!! Under *ALCOHOL* we have described the phenomena which accompany and follow intoxication; under *DELIRIUM TREMENS* and *QINOMANIA*, are pointed the most ordinary consequences of habitual *D.*; and under *INTOXICATION* we shall examine briefly the system of moral conduct proposed for the curation of the diseased action which prompts the vice of *D.* For the present, to dispel as quickly as possible the effects of an occasional excess, and enforce on the excited nerves a sudden sobriety, one of the most effectual remedies is a small dose of sal volatile, or volatile salts, in a wineglass of water,—such as 20 drops of the former, and 15 grains of the latter,—repeating the dose in half an hour. The Scotch are in the habit of taking a basinful of cold broth for the same purpose, and the effect of such a remedy is sometimes very signal. An emetic is, however, the most speedy way of effecting a cure, and following it up by the sal volatile and water half an hour after.

—Intoxication or bewilderment of the mind; disorder of the faculties, arising from another cause than liquor.

“Passion is the *drunkenness* of the mind.”—*Spenser*.

Drupa'ceæ, *n.* (*Bot.*) See *ANYGDALEÆ*.

Drupaceous, (*drupa'shus*.) *a.* [Fr. *drupacé*.] (*Bot.*) Pertaining to, producing, or consisting of drupes.

Drupe, *n.* [Lat. *drupa*; Gr. *druppa*; *drupitēs*, ready to fall—*drip*, a tree, and *pipto*, to fall.] (*Bot.*) A pulpy pericarp or fruit without valves, containing a nut or stone with a kernel, as the plum, peach, &c.

Dru'ry, in Illinois, a township of Rock Island co.; *pop.* abt. 1,200.

Dru'ry's Landing, in Illinois, a village of Rock Island co., on the Mississippi River.

Dru'ses, the popular name of a race, which inhabit a district in the N. of Syria, comprising the whole of the S. range of Mount Lebanon, and the W. slope of Anti-Lebanon. In this district they hold exclusive possession of about 400 towns and villages, and divide the possession of abt. 200 more with the Maronites, *q. v.*, while 80 villages in other parts of Anti-Lebanon are peopled by them. In religion, they pass among the Maronites for atheists. The great body of the people are certainly indifferent to any religious form; but a certain sect, styling themselves *Akels*, are very rigid in the practice of their faith, in which the doctrines of the Pentateuch, the Christian Gospel, the Koran, and the Suli allegories, are wonderfully interwoven. The *D.* are about 80,000 in number; they are a brave, handsome, and industrious people, and are almost all taught to read and write. Polygamy is unknown among them. They have, with incredible toil, carried the soil of the valleys up and along the hillsides, which are laid out in terraces, planted with mulberry, olive, and vine. From the produce of these the hardy mountaineers draw the greater part of their sustenance. Their chief trade is the manufacture of silk. Corn is also

raised, though in very small quantity. Deir-el-kammer is the principal town. The *D.* are noted for their hospitality; but their resentment is easily roused, and this characteristic was artfully used by the Turkish authorities in fomenting the massacre of the Christians in Lebanon, in 1860. From May to Oct. of that year, it is said that the *D.* slew about 12,000 men, women, and children, of whom 200 were priests; besides destroying 163 villages, 220 churches, and 7 convents. In August of the same year, an expedition was sent out from France to Syria, with the consent of the Great Powers, for the purpose of protecting the Christian residents and the so-called *Maronite Christians*. The Sultan dispatched Fuad Pasha as commissioner to restore tranquillity. The consequence was, that 167 of the most guilty *D.* were publicly executed at Damascus, Aug. 20, and many others sent to Constantinople to undergo imprisonment and hard labor.

Dru'se, *n.* [Bohem. *druza*. See *DROSS*.] (*Mining.*) A hole in a rock, filled with water, either in a liquid or crystallized form.

Dru'silla, the youngest daughter of Herod Agrippa I., and sister of the younger Agrippa and Berenice, celebrated for her beauty, and infamous for her licentiousness. She was first espoused to Epiphanes, son of Antiochus king of Comagena, on condition of his embracing the Jewish religion; but as he afterwards refused to be circumcised, *D.* was given in marriage by her brother to Azizus king of Emessa. When Felix came as governor of Judea, he persuaded her to abandon her husband and her religion, and become his wife. Paul bore testimony before them to the truth of the Christian religion (*Acts* xxiv. 24). She and her son afterwards perished in an eruption of Vesuvius.

Dru'sus, CLAUDIUS NERO, commonly called *Drusus Senior*, to distinguish him from his nephew Claudius, the son of Tiberius, was the stepson of the Emperor Augustus, and younger brother of the Emperor Tiberius. B. in 38 B. C., he began his public career in 19, and signalized himself when only 23 years old by his defeat of the Rheti and other Alpine tribes which infested the north of Italy. In 13 B. C. he was sent into Gaul, then in revolt, and, after crushing the rebels there, pushed across the Rhine in pursuit of their German allies. In this campaign he subdued the Sicambri and Frisii, and forced his way to the German Ocean, being the first Roman general who had done so. From this time he made the business of his life to establish the Roman supremacy in Germany, partly by conquest, and partly by the execution of great military works. In 11 B. C. he conquered the Usipetes, the Cherusci, and the Suevi; in the following year the Chatti, the Nervii, and was prosecuting the work of subjugation in 9 B. C., when a fall from his horse cut short his brilliant career in his 30th year. For his exploits in Germany, Drusus was rewarded with the title of *Germanicus*, but care must be taken not to confound him with the celebrated Germanicus, his own son.—See *GERMANICUS*.

Dru'sy, **Drused**, *a.* (*Min.*) Studded with numbers of small crystals.

Dru'xy, **Dru'xy**, *a.* Having white, spongy veins, as timber.

—*n.* Timber in a state of decay, having spongy spots or veins.

Dry, *a.* [A. S. *dri*, *drig*, or *dryg*. See the verb.] Destitute of moisture; free from water or wetness; arid; not moist; free from rain or mist; as, *dry* weather, or *dry* soil.—Free from juice, sap, or aqueous matter; not green; as, *dry* timber.—Without tears; not shedding tears; as, *dry* eyes.—Not yielding milk or nourishment; as, to milk a cow *dry*.—Athirst; craving drink; thirst; as, a *dry* throat, to feel *dry*, &c.—Barren; jejune; unembellished; uninteresting; plain; as, a *dry* subject, a *dry* book, a *dry* sermon.—Severe; sarcastic; keen; hard; harsh; as, a *dry* manner, a *dry* retort, a *dry* kind of man.

“His brain's as *dry* as the remainder biscuit after a voyage.” *Shaks.*

(*Fine Arts.*) Frigidly exact; coldly precise in execution; wanting delicacy of outline in form, or easy gradation of color.

Dry wine, wine in which the saccharine element is scarcely perceptible to the palate;—in contradistinction to *sweet wine*; as, *dry* champagne.

—*v. a.* [A. S. *drygan*; L. Ger. *drogen*; Dan. *droogen*.] To free from water, or from moisture of any kind, and by any means; to desiccate; to deprive of natural juice, sap, or greenness; to drain; to exhaust; as, to *dry* the eyes, to *dry* clothes, to *dry* meat, to *dry* herbs, the sun *dries* the ground, &c.

To *dry up*, to parch with thirst; to scorch with the action of heat; to exhaust utterly of water or moisture; as, land *dried up* by drought.—To cease speaking; to stop talking; to give up chattering. (Colloquially used, and vulgar.)

—*v. n.* To grow or become thirsty or parched; to lose moisture; to be drained of juice or liquid matter.

—To evaporate wholly; to be exhaled;—frequently preceding *up*; as, the river has *dried up*.

Dry'ad, *n.* [Gr. *dryades*, pl. from *drys*, a tree.] (*Myth.*) One of the nymphs supposed to have presiding power over woods and trees.

Dryau'dra, *n.* (*Bot.*) A genus of Australian plants, order EUPHORBIAEÆ.

Dry'beat, *v. a.* To beat violently, or so as to be dry and light.

Dry'beaten, *a.* Beaten with severity, or so as to be dry and light.

Dry'blow, *n.* A violent or hard blow.

(*Med.*) A blow which neither wounds nor sheds blood.

Fig. 877.
A DRUSE GIRL.

John Dryden

1601-1700

dry'-boned, *a.* Possessing dry bones; with a paucity of flesh.

dry'-easter, *n.* (Zool.) A variety of beaver, called also *purpure-beaver*.

dry Creek, in *Alabama*, a post-office of Fayette co.

dry Creek, in *California*, rises in El Dorado co., and after a W.S.W. and S. course enters the Mokelumne river about 20 m. above where the latter joins the San Joaquin.—No. 1, traverses Yuba co., and joins the Bear river about 5 m. from its mouth.—No. 2, traverses Yuba co., and joins the Feather river about 6 m. above the mouth of Bear river.—No. 3, traverses Yuba co., and enters the Yuba river.

dry Creek, in *Iowa*, a former P. O. of Linn co.

dry Creek, in *Missouri*, a post-office of Crawford co.

dry Creek, in *Ohio*, a tributary of the Vernon River, which it enters near Mount Vernon.

dry Creek, in *S. Carolina*, a P. O. of Lancaster dist.

dry Creek, in *Tennessee*, a village of Monroe co.

dryden, JOHN, an English poet, b. at Aldwinckle, Northamptonshire, 1601. He belonged to a respectable Puritan family, and received a good education at Tichmarsh, and at Westminster School. In 1650 he was elected to a scholarship in Trinity College, Cambridge; took the degree of B. A. 1653-1654, and was made M. A. in 1657. After leaving the university, he proceeded to London, where he published his first poem of importance, entitled *Heroic Sonnets on the Death of Cromwell*. On the return of Charles II., D., with equal splendor of fiction, and perhaps with equal sincerity, congratulated the Restoration in a second poem, entitled *Astraea Redux*. He afterwards turned his attention to the stage, planned *The Duke of Guise*, and wrote his first acted play, *The Wild Gallant*. In Dec., 1663, he married a daughter of the first

(Chem.) The tendency of *linseed oil*, *q. v.*, to solidify by exposure is much increased by heating it with about $\frac{1}{10}$ th of litharge, or $\frac{1}{10}$ th of binoxide of manganese; these oxides are technically known as *dryers*, and oil so treated is called *boiled linseed oil*. The action of these metallic oxides is not well understood.

Dry-eyed, (*dr'id*,) *a.* Without tears; not betraying visual emotion.

Dry'-fat, *n.* A vat to hold dry articles.

Dry'-fist, *n.* A contemptuous term for an elderly, withered woman.

Dry'-foot, *n.* A dog trained to hunt game by the scent of the foot.

Dry Fork, in *Illinois*, a village of Bond co., about 67 m. S. of Springfield.

Dry Fork, in *Indiana*, an affluent of Whitewater River, rising in Franklin co., and joining the main stream in Ohio.

Dry'-goods, *n. pl.* (Com.) In the U. States and Canada, a term implying all kinds of articles pertaining to the clothing of the person;—synonymous with the English words, *drapery*, *mercery*, *haberdashery*, &c.

Dry'ing, *a.* Adapted to drain or exhaust moisture; as, a *drying wind*.—Becoming quickly dry and solid; as, *drying paint*.

Drying-oil, *n.* See LINSEED-OIL.

Dry'ite, *n.* (Pal.) Fragments of petrified or fossil wood, in which the structure of the wood is recognized.

Dry'ly, *a.* In a dry, barren, severe, or repelling manner. "Virtue is but *dryly* praised, and starves."—*Dryden*.

Dry'-measure, *n.* A measure of quantity for dry, coarse, or bulky articles.

Dry Mills, in *Maine*, a post-office of Cumberland co.

Dryness, *n.* State of being dry, or without moisture or sap; siccidity; aridity; want of succulence or greenness; barrenness; jejuneity; want of lively or entertaining qualities; harshness or closeness of character; as, *dryness of soil*, *language*, *manner*, *style*, &c.

(Painting.) A term by which artists express the common defect of the early painters in oil, who had but little knowledge of the flowing contours which so elegantly show the delicate forms of the limbs and the insertions of the muscles; the flesh in their coloring appearing hard and stiff, instead of expressing a pleasing softness. The draperies of those early painters, and particularly of the Germans, concealed the limbs of the figures, without truth or elegance of choice; and even in their best masters the draperies very frequently either demeaned or encumbered the figures.

Dry'-nurse, *n.* A nurse who brings up a child by hand, or without the breast;—opposed to *wet-nurse*, who suckles.

—*v. a.* To foster or bring up without suckling. "Romulus . . . *dry-nursed* by a bear."—*Hudibras*.

Dryobalanops, *n.* [Gr. *drus*, oak; *balanops*, acorn; *ops*, aspect.] (*Bot.*) A genus of plants, ord. *Dipterocarpaceae*. The species *D. aromatica*, or *camphora*, is a large tree, found in Sumatra and Borneo. From its stem a liquid called liquid camphor, and a crystalline solid substance named Sumatra camphor, are obtained.—See CAMPHOR.

Dry'os, *n.* (*Bot.*) A kind of mistletoe.

Dry'-pipe, *n.* (*Mach.*) In steam-engines, a pipe to let off dry steam from a boiler.

Dry'-point, *n.* (*Fine Arts.*) A sharp needle used by engravers for stippling, or making fine delicate lines or dots.

Dry'-pointing, *n.* The grinding of needles and table-forks.

Dry Poud, in *Georgia*, a P. O. of Jackson co.

Dry Ridge, in *Kentucky*, a post-village of Grant co., about 50 m. N.N.E. of Frankfort.

Dry Ridge, in *Ohio*, a post-village of Hamilton co.

Dry Ridge, in *Penn.*, a former P. O. of Bedford co.

Dry'-rot, *n.* The name given to the decay of timber, proceeding from the fermentation of sap that is left in the wood, and which is brought about by the influence of warmth, combined with a certain degree of moisture and the want of proper ventilation. It appears in timber that has not been properly seasoned, or which has been cut in the spring of the year, when the sap is rising, as in the case of oak-trees, which are cut at this time for the sake of the bark. When the sap has fermented, the vegetation of fungi follows, which spreads through the wood, destroying the fibres to such an extent that they crumble into dust under any slight pressure. The mode of preservation against dry-rot will be described under Kyanising Wood, *q. v.*

Dry'-rub, *v. a.* To rub or polish without the aid of anything moist.

Dry Ruu, in *Kentucky*, a post-office of Scott co.

Dry Run, in *Mississippi*, a P. O. of Prentiss co.

Dry Run, in *Pennsylvania*, a post-village of Franklin co., about 165 m. W. of Philadelphia.

Dry Run, in *W. Virginia*, a P. O. of Pendleton co.

Dry'-salter, *n.* A dealer in salted or dry meats, pickles, sauces, &c.; also one who vends or trades in drugs, chemicals, &c., generally.

Dry'-saltery, *n.* The commodities dealt in by a dry-salter; business, or place of business, of a dry-salter.

Dry'-shod, *a.* Without wetting the feet; not having the feet wetted. "Dry-shod to pass, she parts the floods in tway."—*Faerie Queene*.

Dry'-stone, *n.* Stone holding without mortar.

Dry'-stove, *n.* A glazed structure for containing the plants of dry, arid climates; such as the cactuses, alcas, and other succulents of S. America and Africa.

Dry'town, in *California*, a post-village of Amador county, on Dry Creek, about 11 miles N.N.W. of Jackson.

—A town of Calaveras co., on Dry Creek.

Fig. 878. — DRYDEN'S HOUSE IN FETTER LANE, (London.)

Earl of Berkshire, and in 1670 he was appointed poet-laureate and historiographer. In 1671, the Duke of Buckingham produced his attack on the English heroic drama of which D. was the head. This satirical piece was entitled *The Rehearsal*, and when it was brought on the stage, the town was amused. Although personally vituperated, D. endured his castigation in silence, and, waiting his opportunity, immortally revenged himself in the witty and profligate duke by making him the hero of *Absalom and Achitophel*. This great poem appeared in 1681; and, enraged at its success, D.'s enemies overed around him like a cloud of venomous gnats. In the same year he published *The Medal*. Elkanah Tittle, one of the most virulent of his foes, replied with some effect; and D., thoroughly roused, issued next year the *Mac Flecknoe*, and the second part of *Absalom and Achitophel*.—After the death of Charles II., D. became a convert to the Roman Catholic faith. This event was announced to the world by the publication of *The Hind and Panther*, in 1687. At the Revolution, he was deprived of his laureateship, and, somewhat raitened in circumstances, he fell back upon his old occupation of writing for the stage. His translation of *Virgil* was begun in 1694, and completed by the close of 1696. A month after the publication of *Virgil*, appeared the *Ode on Alexander's Feast*. In 1695 he commenced his *Fables*, and completed them in a year and a half. Although the great bulk of D.'s works are composed of plays, and although these are, for the most part, devoid of character, feeble in sentiment, false to external nature, and exaggerated in expression, he remains one of the prime glories of English literature. His *Satires* and his *Fables* are masterpieces. In these, he is almost always masculine and natural, and his versification flows on broad, deep, and majestic. Nor is he mons only as a writer in verse; in his prefaces, and his *Essay on Dramatic Poesy*, he proves himself to be a master of what he so finely calls "that other harmony of prose." D. 1700.

dryden, in *Iowa*, a former P. O. of Tama co.

dryden, in *Michigan*, a post-village and township ofapeen co., about 89 m. E. of N. of Lansing.

dryden, in *Minnesota*, a flourishing township of Sibley co.

dryden, in *New York*, a post-village and township of upkins county, about 8 miles E. of Ithaca.

dry-dock, *n.* (Naut.) A graving-dock. See DOCK.

dry'er, *n.* The person who, or thing which, dries; at which exhausts of moisture or greenness. See DIER.

Dry Tortu'gas, (The.) See TORTUGAS.

Dry Valley, in *Tennessee*, a village of White co., about 90 m. E. of Nashville.

Dry'-vat, *n.* A vat or other vessel for preserving dry articles.

Dry'ville, in *Pennsylvania*, a post-office of Berks co.

Dry Wood, in *Iowa*, a village of Jones co., about 32 m. N.N.E. of Iowa City.

Dry Wood, in *Missouri*, a post-village of Bates co., about 150 m. W.S.W. of Jefferson City.

Drywood Creek, in *Missouri*, Bates co., flows N. into Marmiton Creek. A skirmish took place on its banks, about 15 m. from the Kansas border, Sept. 7, 1860, between a force of Union troops under Gen. "Jim" Lane, and a body of Confederates commanded by Price, when the latter retreated.

Du'ad, *n.* [Gr., from *duo*, two.] Duality.

Du'al, *a.* [Lat. *dualis*, from *duo*, two.] Expressing the number two; pertaining to two; as, a *dual number*.

Dual number, (*Gram.*) That form of the verb and substantive by which, in the ancient Greek, Sanskrit, and Gothic, and the modern Lithuanian languages, two persons or things are denoted, in contradistinction to *plural*, which expresses an indefinite number of persons or things.

Du'alism, *n.* [Fr. *dualisme*; from Lat. *duo*, two.] (*Phil.*) A term applied to those systems which refer all existence to two ultimate principles. This doctrine was held by many of the ancient Greek philosophers, who regarded the universe as constituted by two principles, the one *active*, the other *passive*; the one *spiritual*, the other *material*. A mythological D. was held by Zoroaster and the Magi, who accounted for the present state of things by maintaining the existence of a good and an evil principle. The Gnostics and the Manichæans subsequently adopted this belief. Those systems of philosophy which regard matter and spirit as distinct principles are also a species of D. in opposition to materialism. The term dualism is also applied to a theory of perception, *q. v.* The opposite of dualism is *monism*.

Du'alist, *n.* One who holds the doctrine of dualism.

Dualistic, *a.* Consisting of two; pertaining to duality or dualism.

Duality, *n.* That which expresses two in number; division; separation; the state of being two.

Du'au, *n.* [Gael.] (*Lit.*) A canto, or book, in a poem;—sometimes applied to the poem itself; as, the *Duans* of "Ossian."

Duane', in *New York*, a post-town of Franklin co., about 140 m. N. by W. of Albany. Pop. (1897) 450.

Duanes'burg, in *New York*, a post-town of Schenectady co., about 23 m. W.N.W. of Albany. Pop. (1897) about 2,650.

Du'areky, *n.* [Gr. *duo*, two, and *arche*, government.] A form of government in which the power is divided between two individuals.

Dub, *v. a.* [O. Fr. *adoubier*; from L. Lat. *adobare*, to furnish with arms.] To make one a knight by a blow on the shoulder with a sword.

"Knight, knight! What! I am *dubb'd*; I have it on my shoulder."—*Shaks.*

—To confer any dignity or new character.

"A man of wealth is *dubb'd* a man of worth."—*Pope*.

—To tease cloth in order to raise a nap.—To dab; to smear; as, to *dub* one's boots with grease.

(Tanning.) To dress leather with grease, in the process of tanning.

(Carp.) To cut down or reduce with an adze; as, to *dub* a board.

(Sports.) In angling, to dress a fly for bait.

To *dub out*, to render an uneven surface level.

—*v. n.* To make a hasty, loud noise. (R.)

Du Barry, COUNTESS. See BARRY.

Dub'ber, *n.* He who, or that which, dubs.

—In India, a globose bottle or vase, made of leather.

Dub'bing, *n.* Act of investing with the dignity of knighthood.

—Act of conferring any new character upon.

—Smoothing; dressing; rubbing; as, *dubbing* leather.

—A greasy mixture of oil, tallow, &c., used for softening leather.

Dubbiug-tool, *n.* A tool used by carpenters for smoothing the surface of wood.

Du Bellay, (*doo-bel'lay*,) JEAN, a French cardinal and statesman, who enjoyed the favor of Francis I., and was sent as ambassador to Henry VIII. of England and the Pope, Paul III. He was appointed lieutenant-general of the kingdom during the absence of Francis, who was engaged against the emperor Charles V. in Provence. Falling into disgrace on the death of this king, he retired to Rome. B. 1492; d. 1560. This cardinal protected and encouraged letters, and it was at his suggestion that the College of France was founded. Rabelais was attached to his establishment.—His brother GUILLAUME was one of Francis I.'s bravest generals, and was viceroy of Piedmont, where he defeated the Imperialists; he wrote some interesting memoirs, which he called *Ogdoades*.

Dubi'ety, *n.* [Lat. *dubietas*.] Doubtfulness.

Dubious, *a.* [Lat. *dubius*.] See DOUBT. Wavering or fluctuating in opinion; doubting; unsettled; undetermined; doubtful; as, a *dubious* policy.—Not clear or plain; ambiguous; equivocal; as, *dubious* light.—Uncertain; precarious; resting in doubt.

Dub'iously, *adv.* In a dubious manner; doubtfully.

Dub'iousness, *n.* Doubtfulness; a state of wavering and indecision of mind; uncertainty.

Du'bitable, *a.* Apt to be doubted; uncertain.

Du'bitably, *adv.* In a dubitable manner.

Du'bitancy, *n.* [L.Lat. *dubitantia*.] Uncertainty; state of wavering; doubt. (R.)

Dubita'tion, *n.* [Lat. *dubitatio*.] Doubt; act of doubting.

Du'bitative, *a.* [Lat. *dubitativus*.] With predisposition to doubt.

Dubitza, (*doo-beet'cha*.) a town and fort of European Turkey, in Bosnia, on the Una, 25 m. from Gradiska; pop. 6,000.

Dub'lin, a county of Ireland, bounded E. by the Irish Sea, N. by the county of Meath, W. by the counties of Meath and Kildare, and S. by the county of Wicklow. Area, 354 sq. m. In the vicinity of the city of Dublin the lands are fertile and luxuriant, but in more remote parts, agriculture is not so flourishing a state.—*Rivers*. The principal is the Liffey. The Dodder is a small stream, falling into Dublin Bay. There are two canals, the Grand and the Royal canals, by which a navigable communication is effected between Dublin and the Shannon. Pop. (1895) 431,800.

DUBLIN, the metropolis of Ireland, stands on both sides of the Liffey for the space of two miles, before it falls into the splendid Bay of Dublin. It is situated in a co. of the same name, prov. of Leinster, Lat. 53° 20' 35" N., Lon. 6° 17' 30" W. There are few cities of the same proportionate size that exhibit so uniform, handsome, and complete an appearance as *D.* The streets are clean, wide, and spacious. Many of them present high claims to architectural beauty; and some of the squares—St. Stephen's (or *Stephen's Green*) in particular, regarded as the largest in Europe, being a mile in circuit—are extremely imposing. But the great beauty of *D.*, as a city, lies in its public buildings, which, in point of design, architectural taste, and classic beauty, are worthy of all praise; and as these are so arranged as to give a finish to the streets, or present a point of sight or attraction to the ordinary structures, the impression conveyed to the mind of the visitor is one of harmonious completeness, with extreme elegance and beauty. The city has the form of an elongated square or parallelogram, and is surrounded by a road of more than nine miles in circuit. Among the public buildings, the first in antiquity, as in importance, is the royal or official residence, called the *Castle*,—a structure dating its erection from the beginning of the 13th century. Within this residence are contained the vice-regal lodgings and dwellings for all the chief functionaries of state, an extensive armory, treasury, war office, and official chambers for each department, with reception-room, and a chapel, which is regarded as a perfect specimen of the florid Gothic. Next, as objects of curiosity or interest, may be mentioned the Bank of Ireland (formerly the House of Parliament), Trinity College, the Custom-house, and the Four Courts. There are monuments to William III. in College Green; of Nelson in Sackville Street; of the late Duke of Wellington in the Phoenix Park, with several others. To the W. of the city, and N. of the river, lies the splendid park and domain, with the vice-regal lodge, the ordinary abode of the lord-lieutenant, known as the *Phoenix Park*—a tract of wood and meadow, garden, plain and lawn, of three miles in length, by two in width, containing many magnificent trees, a large herd of deer, ample accommodation for the reviews of troops, and several beautiful drives. Opposite the park, with its palatial lodge, and on the south of the Liffey, is the celebrated Kilmainham Hospital, the "*Chelsea*" of Ireland. Nine bridges, seven of stone and two of iron, of different sizes and architectural attraction, span the silvery Liffey; but though it must be confessed that *D.* presents to the notice of the visitor a finer city and more magnificent monuments of national and private taste than most cities of Europe generally, and offers a *coup d'œil* of cleanliness, order, and prosperity, not generally to be met with in any town approaching to such a size and population, yet *D.*, like London, has its leprous spots, its filth, penury, and vice, and which

Bart., and reopened for worship in 1865. Christ Church, the ancient cathedral of Dublin, built in 1038, is another venerable pile, containing some curious monuments, and recently restored by a liberal citizen of *D.* St. George's Church is a superb edifice, with a magnificent front, and spire 200 ft. high. No city, for its size, abounds more in charitable institutions. These are in general well endowed, and some of them are splendid buildings. There are also many learned societies. The chief trade of *D.* consists in exporting poplins, linens, porter and provisions.—Pop. (1895) 281,180.

Dub'lin, in Alabama, a township of Dallas co.

Dub'lin, in Georgia, a village of Butts co., about 8 m. S.E. of Jackson.

—A post-village, capital of Laurens co., near Oconee river, about 120 m. W. by N. of Savannah.

Dub'lin, in Indiana, a village of Parke co., on Raccoon creek, about 10 m. S.E. of Rockville.

—A post-town and township of Wayne co., about 45 m. E. of Indianapolis. Pop. (1897) about 1,000.

Dub'lin, in Kentucky, a post-village of Graves co., about 11 m. W. of Mayfield.

Dub'lin, in Maryland, a post-village of Harford co., about 12 miles N. by W. of Havre de Grace.

Dub'lin, in New Hampshire, a post-town and township of Cheshire county, about 35 miles S.W. of Concord.

Dub'lin, in Ohio, a post-village of Franklin co., on the Scioto River, about 12 m. N.N.W. of Columbus.

—A township of Mercer co.

Dub'lin, in Pennsylvania, a post-village of Bucks co., abt. 7 m. N.N.W. of Doylestown.

—A township of Fulton co.

—A township of Huntingdon co.

Dub'lin Bay, an inlet of the Irish Sea, into which flows the Liffey, forming Dublin harbor. It has 2 light-houses, one at Howth Head on the N., the other at Kingston on the S.

Dub'lin Mills, in Pennsylvania, a post-office of Fulton county.

Dublin Station, (on the Virginia and Tennessee Railroad,) in W. Virginia, Pulaski co., was the scene of a sharp action, fought May 10, 1864, between the Nationalists under Gen. Crook, and a body of Confederates under Gen. McCausland, in which the latter were defeated.

Dubniéza, (*doo-bee'za*.) a town of European Turkey, on the Djerma, 22 m. from Sophia. Manuf. Iron works. Pop. 6,000.

Dubois, GUILLAUME, (*doo-beaw'*.) a French cardinal and statesman, b. in Brives-la-Gaillarde, 1656. He was the son of a poor apothecary in Limousin, and became valet to the superior of the college of St. Michael at Paris, where he studied, and entered into orders. Being appointed private reader to the Duke de Chartres, afterwards duke of Orleans and Regent, he received the rich abbey of St. Just, and subsequently became counsellor of state. In 1717 he was sent to England as plenipotentiary to sign the triple alliance, which had been entered into against Spain, between England, France, and Holland. On his return, he was made minister and secretary of state, and obtained the archbishopric of Cambray. In 1721 the Pope advanced him to the cardinalate, and, in the following year, he was appointed first minister of state. From that time he reigned absolute master, and the French court, already so depraved, sank still lower in its vices; but happily his death soon put an end to his power. He possessed great talents, but these were sullied and clouded by his vices of debauchery, avarice, and guilty ambition. D. 1723.

Dubois', in Illinois, a post-office of Washington co.

Dubois', in Indiana, a S.W. co.; area, about 420 sq. m. Rivers. Patoka, and the E. Fork of White River. Surface, diversified; soil, generally fertile. Min. Stone-coal. Cap. Jasper. Pop. (1890) 20,253.

Du Bois-Reymond, EMIL, a German physiologist, b. 1818, in Berlin. After having zealously studied geology, anatomy, and physiology, he began, in 1841, his examinations and studies on animal electricity; to which he has devoted most of his life. In 1843 appeared his treatise *Ueber den sog. Froschstrom und die elektro-motorischen Fische*; and his graduation thesis, *Quæ apud veteres de piscibus electricis extant argumenta*. After many years of labor and study, he issued his great and well-known work, *Untersuchungen über thierische Electricität*, in which he diffuses an entirely new idea and theory on the electrical action of the muscles and nerves of the animal and human systems. In 1851 he was elected to the Berlin Academy of Science, and in 1853 to the chair of professor of physiology in the university. *D.* is one of the most famous representatives of the physical school of physiology. Of his other works are to be mentioned: *Gedächtnissrede auf Johannes Müller*; *De fibra muscularis reactione ut chemici visa est acida*; and *Beschreibung einiger Vorrichtungen und Versuchsweisen zu elektro-physiol. Zwecken*.

Dubuque', in Iowa, an E. county, bordering on Illinois and Wisconsin; area, about 600 sq. m. Rivers. Mississippi, Fall, and Little Makoqueta rivers. Surface, uneven; soil, moderately fertile. Min. Lead. Cap. Dubuque. Pop. (1890) 49,848.

—A city, the capital of the above co., situated on the right bank of the Mississippi, about 450 m. above St. Louis, Mo. Among the principal buildings may be mentioned the Market House, City Hall, U. S. Custom House, Episcopal seminary, &c. *D.* is the depot for the lead-mining region W. of the Mississippi and a center of trade for Eastern Iowa. From 5 to 10 million pounds of lead are shipped from here annually, worth from \$350,000 to \$500,000. Manuf. Iron, shot, flour, lumber, &c. *D.* has an extensive railroad commerce with Chicago, and river trade with St. Paul, St. Louis and New Orleans. This

town was first settled in 1788 by a Frenchman named François Dubuque, but the colony was soon driven away by the Indians, who claimed the territory. The white returned in 1830, and from 1833, the title of the Indian being extinguished, the town rapidly increased in population and importance. Pop. (1897) about 33,500.

Du'cal, *a.* [Fr. from Lat. *ducalis*.] Pertaining to a duke having reference to a duke; as, the *ducal* dignity, a *ducal* coronet.

Du'cally, *adv.* After the manner of a duke.

Du Cange, CHARLES DUFRESNE, (*doo-kang'*.) a French historian and philosopher, b. at Amieux, 1610. He wrote a *History of Constantinople under the French Dynasties of Emperors*, and other works, the most celebrated of which is his *Scriptural Glossary*, a book of constant reference. D. 1688.

Duc'at, *n.* [Lat. *ducatus*, *duchy*.] A gold coin, formerly much used throughout the currency of Europe. It derives its name from the legend found on the first piece of the kind, which were coined in Sicily during the 12th century. The legend runs: *Sil tibi, Christe, datus, quoniam tu regis, Duactus*, "Let that *duchy* be thine, O Christ, which thou rulest." After the 12th cent. the issue of *D.* increased largely in Italy: Venetian *D.* were called *Leccchini*, from Lecca, where they were coined. In 1557 Germany adopted the *D.* into the currency, and shortly afterwards its use spread over the whole of the north of Europe. The *D.* varies in quality and weight. The ordinary *D.*, which is current in Russia, Austria, Hanburg, &c., weighs 54 grains troy, and has a value of about \$2.33.

"Dead, for a ducat, dead."—Shaks.

Duca'to, (*Cape*.) a cape at the S. extremity of Samos, one of the Ionian Isles. It is the Leucadia promontory, or "Lover's Leap," of the ancients.

Ducat'on, *n.* [Sp. *ducaton*.] A silver coin formerly used in some European states; a little ducat.

Ducha'teau, in Wisconsin, a former P. O. of Door co.

Duchesse, (*doo-shain'*.) ANDRÉ, a French historian, 1584. He published a series of original works on the History of France, in 5 vols. folio; and was named the "father of French history." D. 1640.

Duch'es'nois, JOSEPHINE RUFIN, a celebrated French actress, b. 1777. She performed at the *Théâtre Français* from 1802 till 1830. D. 1835.

Duch'ess, *n.* [Fr. *duchesse*.] The consort or widow of a duke; also, a lady holding the sovereignty of an independent duchy; as, Mary, *Duchess* of Burgundy.

Duch'y, *n.* [Fr. *duché*.] A dukedom; territory under jurisdiction of a duke or duchess; as, the *Duchy* of Lancaster.

Duch'y-court, *n.* The seigniorial or sovereign court of law of a duchy.

Du'eis, JEAN FRANÇOIS, a French dramatist, b. at Versailles, 1733. He took Shakspeare for his model, and the majority of his plays are free imitations of the English poet, altered to accommodate the taste of the time. D. 1816.

Duck, (*duk*.) *n.* [Swed. *duk*, cloth; Ger. *tuch*, intensification of L. Sax. *tog*.] A kind of coarse cloth or canvas, light texture, used for small sails, hed-sacking, awning, &c.; also, a description used for men's wearing apparel, as, *duck* trousers.

Duck, *n.* [See the verb.] (Zool.) See ANAS.

—A sudden inclination of the head downward, as a mark of respect or obeisance;—derived from the action of a *duck* in water; as, "without *duck* or nod." (Milton) —A stone made to ricochet on the surface of the water, as, to play at *ducks* and drakes. See DRAKE.

—*v. a.* [Ger. *ducken*. See DIP and DIVE.] To dip; to immerse; to plunge into water, and suddenly withdraw, as, to *duck* a bather in the sea. —To plunge, as the head in water, and immediately withdraw it; as, to *duck* child in a wash-tub. —To drop the head by a sudden motion, to evade a missile; as, "the bullets will *duck* his head aside." (Swift). —To bow; to stoop; to bend the head obsequiously;—followed by *to* in most cases. "The learned pate *ducks* to the golden fool."—Shaks.

—*v. n.* To plunge into water, and immediately withdraw to dip; to take a header into water. —To bow; to cringe; to incline the head, as a mark of respect, reverence, or deference.

Duck, *n.* [Dan. *dukke*.] A word of endearment, implying a pet, a darling; any fondly regarded object; as, a *duck* of a man, a *duck* of a dress, &c.

"My dainty *duck*, my dear-a."—Shaks.

Duck'-bill, *n.* (Zool.) See ORNITHORHYNCHUS.

Duck'-billed, *a.* Having a bill or beak resembling that of a duck.

Duck Creek, in Delaware, a hundred of Kent co. Pop. (1897) about 4,300.

—Forms the boundary between New Castle and Kent cos., and empties into Delaware Bay.

Duck Creek, in Georgia, a post-office of Walker co.

Duck Creek, in Illinois, a former post-office of Warren co.

Duck Creek, in Indiana, a township of Madison co., about 18 m. N.N.W. of Anderson.

—Joins the Whitewater River near Brookville.

Duck Creek, in Ohio, a tributary of the Ohio River, which it enters about 2 m. above Marietta.

Duck'er, *n.* One who ducks, plunges, or goes head foremost into water. —A cringer; an obsequious attendant; one who fawns upon, or bends to.

Duck'ers, in Kentucky, a post-office of Woodford co.

Duck-hawk, *n.* (Zool.) See PEREGRINE FALCON.

Duck Hill, in Mississippi, a post-office of Carroll county.

Duck'ing-stool, *n.* A chair in which scolding and vixenish wives were formerly securely fastened, to

Fig. 880.—ST. PATRICK'S CATHEDRAL, (Dublin.)

appear more loathsome from the beauty and order around, and to which dirt and poverty clings like a reproachful fester. St. Patrick's Cathedral (Fig. 880), built in 1190, and dedicated to the patron saint of Ireland, has been completely restored, at a cost of \$1,250,000, defrayed by Sir Benjamin Leo Guinness,

ceive the punishment of being ducked in water. The woman was placed in the chair with her arms drawn backwards; a bar was placed across her back and inside her elbows, while another bar held her upright; in this uncomfortable position she was securely tied with cords. The persons appointed to carry out the punishment, by raising their end of the beam, caused the unfortunate culprit to go overhead into the water. By pulling down their end with a chain, she was once more brought to the surface; and the ducking was repeated, according to the greatness of her offence. Sometimes the *D. S.* was combined with a tumbrel. A *D. S.* of this description (Fig. 881) was in use at Leominster, Eng., up to the year 1809; the beam was 23½ feet in length. The practice of using the *D. S.* commenced in the 15th cent., but had

Fig. 881. — DUCKING-STOOL.

almost died out by the close of the 15th. The *ducking-stool*, often confounded with the *D. S.*, was a different punishment; it was used unreservedly for men and women, who were fixed in a stool at their own doors, to be pelted and hooted at by the mob.

Duck Island, off the coast of Great Manitoulin Island, in Lake Huron.

Duck-legged, (*duk'legd*), *a.* Having short legs, like a duck.

"Duck-legged, short-waisted, such a dwarf she is,
That she must rise on tiptoes for a kiss."—*Dryden*.

Duck-ling, *n.* A young, tender duck.

Duck's-meat, *Duck's-meat*, *n.* (*Bot.*) See LEMNA.

Duck River, in Tennessee, rises near the W. base of the Cumberland Mountains, and after a general S.W. W., and N.W. course of about 250 m., enters the Tennessee River in Humphreys co.

A post-office of Hickman co.

Duck River, in Wisconsin, rising in Ontonagon co., and flowing N.E. through Brown co., into Green Bay.

Duck's-foot, *n.* (*Bot.*) See PODOPHYLLUM.

Duck-weed, *n.* (*Bot.*) Same as Duck-meat. See LEMNA.

Duclos, CHARLES PINEAU, a French novelist, b. at Dinan, in Brittany, 1705, became secretary of the French Academy, and succeeded Voltaire as historiographer of France. His principal work is, *Considerations sur les Mœurs du XVIII^{me} Siècle*. D. 1772.

Ducross Station, in Louisiana, a post-office of St. Bernard parish.

Duct, (*dukt*), *n.* [*Fr. duit*, from *Lat. ductus*—*duco*, to lead.] Any tube or canal for the conduct and transmission of a fluid or other substance, particularly in the internal structure of animals or plants; as, the capillary *duct*.

Ductile, *a.* [*Fr.*, from *Lat. ductilis*, from *duco*, I lead, raw.] Easy to be led, drawn, or managed; docile; tractable; pliant; yielding; flexible.

"The designing leaders cannot desire a more ductile and easy people to work upon."—*Addison*.

That may be spun or drawn out into wire-like threads or processes; as, a ductile metal.

"All bodies ductile and tensile."—*Bacon*.

Ductilely, *adv.* In a pliant, ductile manner; yieldingly.

Ductileness, *n.* State or quality of being ductile.

Ductility, *n.* [*Fr. ductilité*.] (*Physics*.) The power possessed by certain bodies, and especially by the metals, in virtue of which they are capable of being drawn out in length, while their diameter is diminished, without fracture or separation. Among the metals it may be called in proportion of being able to be drawn out into wires. The order of the metals which are ductile is almost similar to the order of those which are malleable; it is as follows:—Gold, silver, platinum, iron, copper, zinc, tin, lead, nickel, palladium, cadmium. Platinum wire has been produced only $\frac{1}{300000}$ th of an inch in diameter. Brass is exceedingly ductile at a high temperature. The property is also possessed by other substances; such as gums, glues, resins, &c., when softened by moisture or heat.

Ductilimeter, *n.* [*Ductility*, and *Gr. metron*, a measure.] An instrument for comparing the ductility of lead, &c.

Dudder, *v. a.* An English provincialism for to confuse or overpower with noise.

Dudder, *n.* One who peddles in, or hawks about, spurious or flashy articles for sale.

Dudery, *n.* Locally, in England, a rag-and-bone shop; a marine-store.

Dudgeon, (*duj'n*), *n.* [*Ger. degen*, a sword, allied to *usk. tij*, to sharpen.] A small dirk or dagger, or the blade thereof; as, "It was a serviceable *dudgeon*."—*Shakespeare*.

Dudgeon, *n.* [*W. dygen*.] Inward anger or resentment; sullenness; concealed malice or ill-will; discord.

"Civil dudgeon first grew high."—*Butler*.

Dudevant, MADAME. See SAND, (GEORGES.)

Dudley, (*dud'le*), EDMUND, an English minister of state under Henry VII., b. 1462, executed with Empson at the commencement of the following reign, 1510.—His son, JOHN, DUKE OF NORTHUMBERLAND, b. 1502, was the father of Lord Guilford Dudley, whom he married to Lady Jane Grey, (*q. v.*) He was executed for treason, 1553.—AMBROSE, another son of the Duke, b. 1530, was called the "Good Earl of Warwick." D. 1589.—ROBERT, his fifth son, see LEICESTER, (EARL OF).—SIR ROBERT, son of the last-named, and of the Lady Douglas, b. 1573, was celebrated for his skill in hydraulic engineering. D. 1630.

Dudley, in England, an important town in the co. of Worcester, 8½ m. W. by N. of Birmingham. *Manuf.* Nails, flint glass, and iron implements. Mining, smelting ore, and quarrying limestone are extensively carried on. *Pop.* 49,778.

Dudley, in Illinois, a post-village of Edgar co., abt. 27 m. N.N.W. of Terre Haute.

Dudley, in Indiana, a thriving township of Henry county.

—A village of Jackson co., abt. 60 m. S. by E. of Indianapolis.

Dudley, in Iowa, a village of Mitchell co., abt. 57 m. N.N.W. of Cedar Falls.

—A village of Polk co., on the Des Moines River, abt. 10 m. below Fort Des Moines.

Dudley, in Massachusetts, a post-town of Worcester co., abt. 50 m. S.W. of Boston. *Pop.* (1897) abt. 3,100.

Dudley, in Missouri, a post-office of Stoddard co.

Dudley, in N. Carolina, a post-village of Wayne co., abt. 76 m. N. of Wilmington.

Dudley, in Ohio, a village and township of Hardin co., abt. 60 m. N.W. of Columbus.

Dudley, in Pennsylvania, a P. O. of Huntingdon co.

Dudleytown, in Indiana, a post-village of Jackson co., abt. 78 m. S. by E. of Indianapolis.

Dudleyville, in Alabama, a village of Tallapoosa co., abt. 150 m. E.S.E. of Tuscaloosa.

Dudleyville, in Illinois, a post-office of Bond co.

Duds, *n. pl.* Cast-off garments; old clothes;—sometimes used, in a colloquial and vulgar sense, for wearing apparel in general.

Due, (*dü*), *a.* [*Fr. dû*, pp. of *devoir*; *Lat. debio, debitas*, to owe—*de*, and *habere*, to have. See HAVE.] Owed; owing; that ought to be paid or done to another; as, there is twenty dollars *due* to him, to pay *due* respect, &c.—Proper; fit; appropriate; suitable; becoming; as, I shall apply it to its due purpose.—Seasonable; exact; that ought to have arrived, or to be present, before the time specified; as, a bill *due* four months after date, he is *due* by the next mail, &c.

"Eve within, *due* at her hour, prepared for dinner."—*Milton*.

—*adv.* Directly; straightly; exactly; duly; as, a ship heading *due* South.

—*n.* That which is owed or owing; that which one contracts to pay, do, or perform for another; that which law or justice requires to be paid or done; that which office, rank, station, social relations, or established rules of right or decorum require to be given, paid, or done; that which is demanded by legal or moral right; as, give every man his *due*.

"The *due* of honour in no point omit."—*Shaks*.

—Right; just title; proper claim.

Due-bill, *n.* (*Law*.) An acknowledgment of a debt in writing. It differs from a promissory note in many particulars. It is not payable to order, nor is it assignable by mere indorsement.

Duel, *n.* [*Fr.*, from *Lat. duellum*, *L. Lat. duellum*—from *duo*, two; *It. duello*.] A premeditated combat between two persons, for the purpose of deciding some private difference, or establishing some real or fanciful point of honor; a single combat;—hence, any duality of personal contention, contest, or competition.—See DUELLING.

—*v. n. or a.* To meet as foes, and engage in single combat.

"He might have been genteelly *duelled* into another world." *South*.

Duel, in Michigan, a post-office of Bay co., about 25 m. N.W. of Bay City.

Dueller, *n.* One who fights a duel, or single combat; a duellist.

Duelling, *n.* Act or practice of fighting in single combat.—Duels usually arise out of private quarrels, and the general practice is for the party insulted to send a friend to demand an apology. If he refuses, he is requested to name his friend; and the two friends, or seconds as they are called, arrange the preliminaries for the combat. They also choose the ground, regulate the mode of fighting, place the weapons in the combatants' hands, and enforce compliance with the rules which they have decided upon. Although the duel is now of very rare occurrence, it is comparatively a modern institution. Among the ancient Greeks and Romans no such practice existed, and the word *duellum* meant a war between two nations. Afterwards, under the belief that God would interfere miraculously in behalf of the innocent against the guilty, judicial disputes were decided throughout Europe by trial by battle. See BATTLE, or BATTEL.) Probably the duel originated in a belief in the same principle. It seems to have had its origin among the Germanic nations. Louis le Débonnaire was the first French king who permitted disputants to resort to arms. Henri II. prohibited *D* on account of a combat between his friend François de la Chastaignerie and Guy Chabot de Jarnac, in which the latter was slain. The practice of *D*, however, still continued. François I. openly encouraged it, and set an example by challenging Charles V. Several ineffectual attempts were made to put down the practice; but to such an extent was it carried on during the sovereignty

of Henri IV., that in the first eighteen years of his reign 4,000 gentlemen lost their lives in duels. Henri was compelled by popular feeling to endeavor to abolish the custom by adding death, in extreme cases, to the penalties then in force. He, however, did not look with an unfavorable eye upon *D*; consequently, although very unlawful, it became very fashionable. During the reign of Louis XIII. *D* became so prevalent that it was said in Paris that no Frenchman was worth looking at unless he had killed his man. Although *D* was so common, the law against it was carried out with great rigor, and several noblemen and gentlemen of high renown were beheaded for persisting in fighting. During Louis XIV.'s reign, duels of three, four, and five a side were common; but the king at last enforced the laws with such firmness, that, for the time, *D* was almost abolished. *D* appears to have been introduced into England about the time of the Norman Conquest; but it was principally in its public or judicial form. Private *D* was very prevalent in the reign of Queen Elizabeth. It declined during the Commonwealth, but broke out again in the reign of Charles II. During the reign of William III. attempts were made to abolish *D*; and in 1712 a bill was introduced into Parliament, but was thrown out, notwithstanding that its objects had been strongly advocated in Queen Anne's speech. After the wearing of swords was abandoned, *D* diminished for a time; but the pistol soon began to take the place of that weapon. After a time, chance took the place of skill, and ghastly, albeit absurd, duels were fought at two or three paces, one pistol being loaded and the other not. This sort of *D* seems to have reached its climax when the disputants made choice by lot between two pills, one made of bread, and the other containing poison. From this point *D* declined, and has now quite fallen into disrepute; in England, indeed, it may be said to be abolished. By the laws of that country, any man killing another in a duel, however fair it may have been, is considered guilty of murder; but in France, as in France, *D* is not looked upon unfavorably by the public, and no jury has been found who would convict any one charged, in the case of a fair duel. The duels among the German students are merely fencing-matches with sharp weapons; and although some ugly cuts in the face are given and received, they are never absolutely dangerous, as armed seconds are always on the alert to prevent any serious wounds. *D* has been known in the U. States since the original settlement, the first duel taking place in 1621, at Plymouth. Among the most celebrated duels fought in this country are the following: Gen. Hamilton and Col. Burr, in 1804, in which the former was killed; Henry Clay and John Randolph, in 1826. Benton, in closing his account of the fight, says: "Certainly duelling is bad, but not quite so bad as its substitutes—revolvers, bowie-knives, black-guarding, and street assassination under the pretence of self-defence." Gen. Jackson killed Mr. Dickinson in a duel, and was also engaged in other affairs. Col. Benton killed a Mr. Lucas, and had other affairs of honor on his hands. By the common law, when one of the parties to a duel is killed, the survivor and the seconds are guilty of murder, and the participants in a duel where there is no fatal result, are held liable for misdemeanor; but many of the States have modified this rule by legislative enactment, and in more than half the Union the legislation against duelling has been ineffective. In the Northern States, nevertheless, the force of opinion is strongly against duelling. In the American navy and army, an officer implicated in a duel with a brother officer, either as principal or second, is liable to be cashiered upon conviction by a court-martial.

—*p. a.* Pertaining, or having reference to, a duel; requisite for a duel; as, *duelling* pistols, the *duelling* code, &c.

Duellist, *n.* A dueller; one who meets and fights another according to the code of honor; one who upholds the theory and practice of duelling; as, a noted duellist.

"He hath no honour lost, our duellists say."—*Ben Jonson*.

Duello, *n.* [*It.*] A duel, or single combat.

—Practice of duelling; code of laws which regulates duels, or affairs of honor.

"The gentleman will, for his honour's sake, have one bout with you; he cannot by the *duello* avoid it."—*Shaks*.

Duenna, *n.*; *pl.* DUENNAS. [*Sp. duëña*, from *Lat. domina*, the mistress of a family. See DOMINATE.] An old widow, or other elderly female, placed in attendance on a younger woman, as a safeguard.

"I bribed her *duenna*."—*Pope*.

—The title formerly given to the lady-in-waiting on the queens of Spain.

Duet, *n.* [*It. duetto*.] (*Mus.*) A two-part composition, either vocal or instrumental, with or without a bass and accompaniment. To form a good *D*, the execution should be pretty equally distributed between the two parts; the melodies so connected, intermingled, and dependent on each other, as to be entirely inseparable, but at the same time perfectly related and concinnous when heard together.

Dufaure, JULES ARMAND STANISLAS, a French statesman, b. 1798. Becoming an influential member of the liberal party in the Chamber of Deputies, he became Minister of the Interior in 1848-9; Minister of Justice 1871; and in 1874-5 he became a member of the Broglie cabinet. D. June 27, 1881.

Duff, *n.* A term applied by sailors to a pudding made of suet and flour, occasionally with raisins added; as, plum-*duff*.

Duffel, *Duffe*, *n.* [*Erymol. uncertain*.] A kind of coarse woollen cloth, resembling frieze.

Dufferin and Ava, FREDERICK, MARQUIS OF, an English author and statesman, b. in 1826; after holding

various high offices of state became in 1872 Governor-General of Canada, and (1884) Viceroy of India; appointed ambassador at Rome (1886), and at Paris (1892); elected president of Royal Geographical Society (1878). Wrote *Letters from High Latitudes*; *Speeches in India*, &c.

Dufrenoy'site, *n.* (*Min.*) An orthorhombic mineral. Sp. gr. 5.549. Lustre metallic; color blackish lead-gray; streak reddish-brown. *Comp.* Sulphur 22.10, arsenic 20.72, lead 57.18=100.

Dug, *n.* [Swed., Goth. *daeggja*, to suckle; Sansk. *dah*, to milk; probably allied to Heb. *dad*, breast, pap.] The pap or nipple of the breast; now applied only to a cow or other beast, unless in contempt.

"Dying with mother's dug between its tips."—*Shaks.*

Dug, *imp.* and *pp.* of *Dig*, *q. v.*

Dugan's Landing, in Arkansas, a village of Jefferson co.

Dugausville, in Kentucky, a P. O. of Mercer co.

Dugdale, SIR WILLIAM, an English antiquary and herald, b. at Coleshill, Warwickshire, 1605. He was made Chester herald in 1644; accompanied Charles I. throughout the civil war; and after the Restoration, on being appointed Garter king-at-arms, received the honor of knighthood. His chief work is the *Monasticon Anglicanum*; but he also wrote *The Baronage of England*, 3 vols.; *The History of St. Paul's Cathedral*; *Origines Juridicales*, and several other works of merit. The "Monasticon" was the joint work of Dugdale and Roger Dodsworth, and appeared in 3 vols. folio; the first vol. in 1655, the third in 1673. A new and considerably extended edition was projected in 1812, and completed in 6 vols. folio, in 1830. D. 1686.

Dugdemo'na, in Louisiana, a village of Catahoula parish, on Bayou Castor, about 40 miles W. of Harrisonburg.

Dugom'nier, a French general, native of Guadaloupe, b. 1736. He early entered the army, and after honorable service, for which he received the cross of St. Louis, he retired to Martinique, where he possessed a large estate previously to the French Revolution. He espoused the Republican cause, and being nominated colonel of the national guards of the island, he defended it against a body of royalist troops sent from France. He afterwards went to France, and being made commander-in-chief of the army in Italy, he gained many important advantages over the Austro-Sardinian army. He took Toulon, after a sanguinary contest, in 1793. He next commanded the army of the Eastern Pyrenees, and, in 1794, gained the battle of Alberdes, and seized the post of Montesquieu, taking 200 pieces of cannon, and 2,000 prisoners. He continued his career of victory till he fell in an engagement at St. Sebastian, 1794.

Dugong, *n.* (*Zool.*) See MANATTE.

Dug-out, *n.* A kind of canoe hollowed out of a log or trunk of a tree, used on the Western rivers of the U. States.

Dug Springs, a locality in Missouri, 19 m. S. W. of Springfield, memorable for a skirmish that occurred Aug. 2d, 1861, between bodies of Union and Confederate troops, commanded by Gens. Lyon and Rains, respectively, in which the latter sustained a reverse. Loss on both sides trifling.

Duguay-Trouin, RENÉ, one of the most celebrated naval officers of France, was b. 1673, at St. Malo, left the school at Caen, where he was to have studied theology, with the reputation of a good-for-nothing fellow, and betook himself to the sea. His career, which was very brilliant, may be divided into two parts, the first extending from 1689 to 1697, and the second from 1697 to the close of his life. During the former, he cruised about as a sort of privateer, inflicting immense damage on the enemies of France. The English merchantmen suffered severely from his attacks. In the Channel, on the coasts of Ireland and Holland, in the Spanish Main, everywhere fortune followed D. T. Louis XIV., as a reward for his daring exploits, admitted him into the state navy, and gave him the command of a frigate. The second part of his career was as brilliant as the first. In 1707 he engaged a part of the English fleet at the entrance of the Channel, burned one ship, captured three others, and about 60 transports; but the most glorious of his triumphs was the attack and capture of Rio Janeiro, in 1711, after hostilities had lasted for 11 days. The city was ransomed for 610,000 cruzados. The South American expedition of D. T., which cost Portugal in all about 30,000,000 francs, put the seal to the celebrity of the French commander. He was successively named *chef d'escadre*, member of the council of the Indies, lieutenant-general, and naval commander at Brest. In 1731, Louis XV. sent D. T. into the Levant, to chastise the barbarians inhabiting the neighboring coasts, and to obtain reparation for the damages done to French commerce. In this, also, D. T. was successful. D. 1736.

Dugueselin, BERTRAND, (*dōō-gai'klang*.) a renowned French warrior and statesman, and Constable of France in the 14th cent., was born about 1314. Though deformed in person, and of a fierce and untractable disposition in his youth, he persevered in his endeavors to eclipse these defects by the brilliancy of his actions; and mainly to him must be attributed the expulsion of the English from Normandy, Guienne, and Poitou. D. was captured by the brave English commander, Sir John Chandos, at the battle of Auray in 1364, and was ransomed for 100,000 francs. Sent to subdue the roving companies of soldiery, then wasting France, he placed himself at their head, and led them to foreign wars. While serving in Spain against Peter the Cruel, he was again made prisoner by the English under the Black Prince, but was soon liberated. He was soon after made con-

stable of France. Suspicion unjustly falling upon him, he proudly resigned, and determined to retire to Spain. Before setting out he went to assist in the siege of the castle of Randan, and there d. 1380. So highly, indeed, was he esteemed even by his enemies, that the governor insisted on placing the keys of the fortress on the coffin of the hero. There are several French Lives of this hero, and a new *History of his Life and Times*, by D. F. Jamieson, was published in 1864.

Duguetia, (*du-gu'e'she-a*.) *n.* (*Bot.*) A genus of plants, ord. *Anonaceæ*. The only interesting species is *D. guianensis*, a native of Guiana, which furnishes the strong elastic wood called *lanewood*. This is chiefly used by coach-makers.

Du'ida, a mountain of Venezuela, in South America, stands in Lat. 3° 30' N., and Lon. 66° 10' W. It is of conspicuous form, being perpendicular on two sides, and bare at the summit. Rising, moreover, to the height of 8,500 ft., it forms a safe landmark for the voyager on the Orinoco.

Duisburg, (*doo'is-boorg*.) a strong town of Rhenish Prussia, on the Rhine, 14 m. from Düsseldorf. *Mamf.* Woollens, cottons, soap, leather, tobacco.

Duke, *n.* [Lat. *dux*, a leader, a general; Fr. *duc*; It. *duca*.] An honorary title given in England and in France to noblemen, or military commanders of the highest rank. The term is first used in history in *Gen.* xxxvi. 15, with reference to the grandsons of Esau, and probably signifies their position as heads or founders of families or tribes, as it could have no political meaning further than this at that early period. It was applied as an especial title of rank to the military governors of provinces of the Roman empire abt. the year 325, in the reign of Constantine the Great, when they ceased to exercise the civil functions which had hitherto formed a part of the duties of the Roman governors or procurators. There were from 30 to 40 of these *duces* or dukes, 10 of whom were particularly distinguished by the appellation of *comes*, or companion, in allusion to the closer relationship into which they were brought to the emperor, by virtue of the high dignity with which they had been invested. The title of *comes* in late ages became *count*, and then implied a rank subordinate to that of duke, although it had previously been superior to it. (See *COUNT*.) The early Roman counts and dukes were distinguished by wearing a golden baldric or band, and they received considerable emoluments from the state, to enable them to support their dignity in a becoming manner. Their power was entirely restricted to their military command, other officers being appointed to collect the revenues and administer justice. The title of *D.* was preserved in succeeding ages, and for the most part applied to military commanders of high rank, by the northern tribes, who asserted their supremacy over the south of Europe in the latter days of the Roman empire. At the time of the conquest it was given to persons exercising almost absolute and kingly power over large tracts of territory called *dukedoms*, acknowledging the superiority of the monarch, of whom they were supposed to hold their lands by feudal tenure, by some slight and occasional act of homage. (See *FEUDAL SYSTEM*.) It was, however, no uncommon thing for the *D.* to enter the lists with his feudal lord on very slight grounds of offence, and successfully hold his own against him. Such were the dukes of Normandy, Gascony, Aquitaine, and Burgundy. Their dominions and titles were hereditary in all cases. The title is applied even in the present day to the sovereigns of many petty German states, sometimes with the prefix *grand* or *arch*; as the grand-duke of Baden, the arch-duke Charles, &c. In England the Norman and Plantagenet kings assumed the title by virtue of their continental possessions, acquired by inheritance or marriage; but it was first conferred as an honorary distinction by Edward III. on his son Edward, the Black Prince, whom he created *D. of Cornwall* in 1335; since which time the title has always belonged to the Prince of Wales for the time being, by prescriptive right. There are at present 29 dukes in Great Britain,—the *D.* of Cambridge, a *D.* of the blood-royal, being excepted,—of whom 20 are English, 7 Scotch, and 2 Irish. The *D.* of Norfolk is the premier or senior *D.* of England, by priority of creation; the *D.* of Hamilton, the premier *D.* of Scotland; and the *D.* of Leinster, of Ireland.

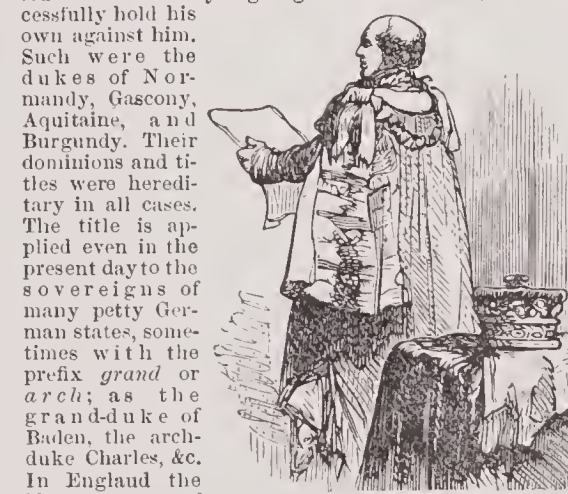

Fig. 882.

ENGLISH DUKE, IN HIS STATE ROBES.

To dine with Duke Humphrey, to go without dinner. This phrase is said to have originated from the habit of persons needing a dinner lounging about the tomb of Humphrey, Duke of Gloucester, in old St. Paul's Cathedral, London, in hope of an invitation from a passer-by. **Duke'dom**, *n.* The territory, possessions, or jurisdiction of a duke; a duchy.

"Prospero found his dukedom in a poor isle."—*Shaks.*

—The title, dignity, or quality of a duke; as, the *duked* of Norfolk.

Duke'ling, *n.* A poor, insignificant duke; (applied in contempt.)

Duke of Ex'eter's Daughter, *n.* (*Hist.*) Instrument of torture resembling the rack in construction. It is said to have been invented in England, during the reign of Henry VI., by the dukes of Exeter and Sussex. According to Blackstone, it was never put in use. It was at one time exhibited along with other instruments of torture in the Tower of London.

Dukes, in Massachusetts, an extreme S.E. co., consisting of several islands separated from Barnstable co. by Vineyard Sound, the principal of which is Martha's Vineyard. *Area*, abt. 118 sq. m. *Surface*, uneven soil, fertile. *Cap.* Edgartown.

Duke'ship, *n.* State or quality of being a duke.

Dulaney's Valley, in Maryland, a post-office, Baltimore co.

Dulcamara, *n.* (*Bot.*) See SOLANUM.

Dulces, (*dool'sā*.) a lake of Guatemala, abt. 102 m. N. of the city of New Guatemala, cap. of the state. *D.* abt. 25 m. in length, and averages 10 in breadth. It is connected with the Gulf of Honduras by the river Dulce and a smaller lake called the Golfete.

Dul'ce, or GOLFO DULCE, an arm of the Pacific Ocean, Costa Rica, between the points of Burica (Lat. 8° Lon. 83° W.) and Gorda (Lat. 8° 32' N., Lon. 83° 50' W.) on the latter of which is a fort.

Dulce, (*Rio*.) a river of La Plata, rising in the district Tucuman, and flowing S.E. past Santiago into Poron Lake.

Dulcet, (*dul'set*.) *a.* [It. *dolciato*, sweet, from Lat. *dulcis*, sweet, and *melos*, from Gr., an air, a song.] Luscious, sweet or delicious to the taste; as, "dulcet creams!" *Milton*.

—Sweet and captivating to the ear; harmonious; of softness and melody.

"Dulcet symphonies, and voices sweet."—*Milton*.

Dulcia'na, *n.* [Lat. *dulcis*.] (*Mus.*) A sweet-toned organ-stop.

Dulcification, (*dūl-si-fi-ka'shon*.) *n.* [Fr.] Act of making dulcet, or sweet.

Dulcified, (*dūl-si-fi'id*.) *p. a.* Sweetened; as, *dulcified* spirits of nitre.

Dulcify'uous, *a.* Falling sweetly. (*R.*)

Dul'cify, *v. a.* [Fr. *dulcifier*, from Lat. *dulcis*.] To sweeten; to free from harshness or acidity.

"Spirit of wine dulcifies spirit of salt."—*Arbuthnot*.

Dulcigno, a town of Montenegro, in Albania, formerly belonging to Turkey. P. 8,000. See MONTENEGRO.

Dulciloquy, (*dūl-sil'o-kwē*.) *n.* [From Lat. *du*, and *loqui*, to speak.] A soft, engaging style of speaking.

Dulcimer, (*dul'sim-ēr*.) *n.* [Sp. *dulcemele*, from *dulcis*, sweet, and *melos*, from Gr., an air, a song.] A stringed instrument, seemingly of the wind species, in use among the Jews. It is now sometimes applied to a stringed instrument of stretched metallic wires, beaten with little hammers.

Dulcora'tion, *n.* [L. Lat. *dulcoratio*.] Act of sweetening.

Dulledge, (*dul'lig*.) *n.* (*Ordinance*.) A wooden wheel connecting the felloes of the wheel of a gun-carriage.

Dul'tia, *n.* [L. Lat.] Adoration of saints. See LATRY.

Dulich'ium, *n.* [Gr. *duo*, two, and *leichen*, sea; alluding to the glumes in two rows.] (*Bot.*) A genus of plants, ord. *Cyperaceæ*. They are perennial plants, with leafy stems. Spikes axillary, racemose.

Dull, *a.* [A. S. *dol*; L. Ger. *dull*; Ger. *toll*; root in *dölge*, Middle High Ger. *delhem*, to hide.] Slow of understanding; obtuse; stupid; slow and heavy of mind; perception; doltish; as, a *dull* intellect.—Heavy; sluggish; without life or spirit; slow of motion; slow of hearing or seeing; inapt or unready to learn or comprehend; awkward; as, "He was *dull* at classical learning" (*Thackeray*).—Blunt; obtuse; wanting keenness of point or edge; without sharpness; as, a *dull* razor.—Sleepy; drowsy; heavy in manner; insensible; giddy; not pleasing or inspiring; as, *dull* company.—Wanting expression or animation; uninteresting; heavy in quality; melancholy; cheerless; cloudy; as, a *dull* book, a *dull* day, a *dull* occupation, &c.

"To make dictionaries is *dull* work."—*Dr. Johnson*.

—Obscure; dim; not vivid; not bright or clear to the sight; wanting in variety or liveliness of color; gloomy; as, *dull* light, a *dull* sky, a *dull* mirror, a *dull* color.—*v. a.* To make dull; to stupefy; to make insensible or slow to perceive, as the intellect; as, to *dull* pain.—To blunt; to deprive of edge or sharpness; to obtuse; as, to *dull* a knife.

"Borrowing *dulls* the edge of husbandry."—*Shaks.*

—To sully; to tarnish; to cloud; to render dim or gloomy.

"The breath *dulls* the mirror."—*Bacon*.

—To make sad, listless, or melancholy; to damp; to render inactive, as the attention; to make heavy or slow of life or motion; to depress; as, to *dull* one's interest in anything.

"Union in bodies *dulleth* any violent impression."—*Bacon*.

—*v. n.* To become dull, or blunt; to become obtuse or stupid.

Dull'ard, *a.* [From *dull*.] Blockish; stupid.

—*n.* A stupid person; one slow to learn, comprehend, or perceive; a dunce; a blockhead; a dolt; a numskull.

Dull'ardism, *n.* Stupidity; dullness of sense or intellect.

Dull-brained, *a.* Having a dull intellect; stupid; thick-headed.

Dull-browed, *a.* Bearing a gloomy or overcast countenance.

Dull-Disposed (*dis-pōzēd*) *a.* Having a tendency to dullness or melancholy.

Dull'er, *n.* The person who, or thing which, dulls or deadens.

Dull-eyed (*dull'id*), *a.* Presenting a vacant, inanimate expression of countenance.

Dull-head, *n.* A dullard; a dunce; a slow-witted person; one of dull comprehension.

Dull-ish, *a.* Somewhat dull, monotonous, tiresome.

Dully, *adv.* Without life or spirit; listlessly; stupidly.

Dullness, *n.* State or quality of being dull; slowness of comprehension; weakness of intellect; want of quick perception or eager desire; heaviness; drowsiness; disinclination to energy or motion, whether of mind or body; want of clearness or luster; bluntness; want of edge; obtuseness.

Dulse, *n.* (*Bot.*) See RHODOMONTA.

Dulude River, in Michigan. See BLACK RIVER.

Duluth, in Minnesota, a city, cap. of St. Louis co., situated at the W. end of Lake Superior, forming one of the eastern termini of the Northern Pacific R. R., and the northern terminus of the St. Paul and Duluth R. R. It is 126 miles N. N. E. of St. Paul by rail. Its position at the head of navigation of the great lakes gives it a great advantage as a commercial city, and large quantities of agricultural produce and ores are shipped, its elevators having a capacity of 20,000,000 bushels. It has also large manufacturing interests and important fisheries. *D.* has grown with great rapidity. In 1869 its site was a forest; in 1880 the total population was 138, and in 1895 it had grown to 59,396.

Duly, *adv.* [From *due*.] Properly; fitly; regularly; in a suitable or becoming manner.

Dumal, *a.* [From Lat. *dumus*, a bush.] Bushy; pertaining to bushes, briars, or underwood.

Dumaran, an island of the Asiatic archipelago, in Lat. 0° 30' N., Lon. 120° E. Ext. 20 m. by 20; has a town with a pop. of abt. 2,000.

Dumas, ALEXANDRE DAVY, one of the most popular and prolific of all modern French romance-writers, b. at Villers-Cotterets, 1803. M. Dumas was a Creole by extraction, — Gen. Alexandre Davy Dumas, his father, who distinguished himself during the war arising out of the revolution, being the illegitimate son, by a colored woman, of the Marquis de la Pailléterie, a wealthy planter of St. Domingo. *A. D.* began his literary career at an early age, and to the remarkable gift of his facility has added a fecundity of thought and power of delineation that, despite the immense tax made on his imagination for so many years, seems as vigorous and prolific in his creations now as when he first started reading world by the originality and vigor of his penes and characters. As an expeditious, imaginative, and exciting writer of fiction, *D.* is unrivalled. His works constitute in number a perfect library, exceeding 1,200 volumes, embracing, in this vast catalogue, early a hundred acted dramas, historical, social, and domestic novels and romances, besides travels, memoirs, and histories. A man of such unquestioned ability as *D.*, and an author of such universal popularity, may be allowed the harmless exercise of personal vanity; all it must be confessed that his egotism, as exhibited in his travels and biographical sketches, is as transcendent as his literary talent is unquestionable. Out of the extensive list of this author's productions, the works on which his fame most deservedly merits to rest, are *Les rois Mousquetaires*, and *Monte Christo*, — romances which possess great originality of construction, conjoined to powerful situations, natural dialogue, and a vigorous delineation of character. *D.* 1870.

A. DUMAS (father). A. DUMAS (son).
Fig. 883.

Dumas, ALEXANDRE, a French novelist and dramatic writer, son of the above, born at Paris, 1824. He was early introduced into the society of literary men, actors, actresses, and became conspicuous for his wit and society. *Dumas fils*, as he was commonly styled, seemed to have a microscopic power of delineating and magnifying the worst side of society in his dramas, belonged to the sensational school of French literature. *D.* was considered by the public the greatest living dramatist of the *demi-monde*. His principal work of fiction, *La Dame aux Camélias*, created a great sensation. *D.* was reproduced in Verdi's opera *La Traviata*. *D.* was not nearly so prolific as his father; he nevertheless wrote many dramatic pieces which have been generally successful. In 1875 he became a member of the Academy. Died November 27, 1895.

Dumas, JEAN BAPTISTE, a French chemist and botanist, b. Alais, 1800. In 1823 he received the appointment of demonstrator of chemistry at the Polytechnic School, was also made professor of chemistry at the Athénée Paris. From this period the science of organic chem-

istry stands deeply indebted to his exertions. In 1829 he founded the Central School of Arts and Manufactures, and, in 1834, became professor of organic chemistry in the School of Medicine. In 1845 he was made president of the Society for the Encouragement of Industry, and, in 1849, received the *portefeuille* of Agriculture and Commerce. In 1851 he acted as vice-president of the Great Exhibition in London, and subsequently became vice-president of the superior council of public instruction in France. M. Dumas' *Theory of Substitution* is one of his most important works, and his treatise on chemistry, as applied to the arts, is another. Elected to the Academy in 1875. *D.* at Paris, April 11, 1884.

Dumaine, *n.* [Named after the French chemist Dumas.] (*Chem.*) An oily liquid, obtained, among other products, by distilling acetate of lime.

Dumb, (*dum*), *a.* [A. S. *dumb*; Ger. and O. Ger. *stumm*; Heb. *dum*, to be silent.] Having the powers of speech stopped; tongue-tied; mute; without the faculty of articulation; as, the *dumb* creation.

"Like dumb statues, or unbreathing stones." — *Shaks.*

— Silent; not speaking; unwilling to utter speech; as, *dumb-show*.

"On their own merits modest men are dumb." — *Colman.*

— Wanting brightness or color; void of lustre; dim.

"Her stern was painted of a dumb white." — *Defoe.*

Deaf and dumb. See DEAF AND DUMB.

To strike dumb. To confound with fright, awe, or astonishment; to confound the senses, or deprive of the power of speech.

"Struck dumb, they all admir'd the god-like man." — *Dryden.*

Dumbarton, or **Dunbarton**, a co. of Scotland, bounded N. by Perthshire, E. by the cos. of Stirling and Lanark, S. by the Clyde, W. by Loch Long, and Argyshire. *Area*, 297 sq. m., in 2 detached portions. *Rivers*, The Leven. *Lakes*, Numerous, the largest being Loch Lomond. *Surface*, mostly mountainous, but fertile in the low-lands. *Min.* Coal, iron, freestone, and limestone. *Manuf.* Cotton and paper, with large print-fields on the Leven. *Pop.* 52,034.

— A seaport town of Scotland, cap. of the above co., on the W. bank of the Leven, 13 m. N.W. of Glasgow; *pop.* 8,250. The ancient castle of Dumbarton crowns a lofty and precipitous rock, which rises abruptly from a level plain at the confluence of the Clyde and Leven, by which its base is washed on two sides. It has a barrack, containing 1,500 stand of arms, and an armory, in which is the double-handed sword of the patriot Wallace, *q. v.* It was from this castle that Mary, Queen of Scots, whilst yet a child, was conveyed to France; and it was to it that her friends intended to conduct her after her escape from Lochleven.

Dumb-bell, *n.* (*Gymnastics*.) An instrument used for calisthenic purposes, one for each hand, and employed for the purpose of opening the chest and developing the muscles of the superior extremities. It is formed of two globes of iron or wood, joined by a horizontal shank, of 4 or 6 inches in length, sufficient for the hand to grasp, — the fingers being protected from injury by the extending ball at either end. The body being drawn up erect, with the muscles in a state of tension, the operator, grasping a *D.-B.* in either hand, extends his arms horizontally before him, at their utmost length, the bells being so held that the balls at their extremity point upwards and downwards, each instrument, at the same time, touching the other. The body being kept rigid, and firmly planted on the feet, the arms are to be swung slowly outwards, as far back as the operator can endure the strain, care being taken to keep the arms in the same line, level with the top of the shoulder, during the operation. The hands are then to be brought rapidly forward till the bells strike in front, and again, with the recoil, carried outwards and backwards, repeating the same movements as long as the operator has endurance for the task. As the *D.* are made of different sizes and weights, it is advisable always to begin with the lightest weights first, such as the *four-pound D.*; and when the muscles have, after a week or two of practice, become accustomed to the strain, the *seven or ten-pound bell* may be used, and continued till the operator is enabled to make them meet behind his back with the same concussion they encounter in front. For public singers, declaimers, and those who require a capacious chest and an uninterrupted play of lung, the use of the *D.* is of immense service. At the same time their steady employment materially improves the figure by giving an erect carriage and mainly bearing to the body.

Fig. 884. — DUMB-BELL.

Dumb-cane, *n.* (*Bot.*) See CALADIUM, and DIEFFENBACHIA.

Dumbly, *adv.* Mute; silently; without speech.

Dumbness, *n.* State of being dumb; silence; want of articulation; voluntary omission of speech; muteness.

"There was speech in their dumbness." — *Shaks.*

Dumb-show, *n.* Pantomimic representation; gesture without words.

Dumb-waiter, *n.* A table placed on a movable frame, enabling viands, &c., to be passed from one story of a house to another; thus dispensing with the attendance of servants for that purpose.

Dumesnil, MARIE FRANÇOISE, (*dū-mā-neel'*), a celebrated French actress, b. 1713. She first appeared on

the stage in 1737, rose to the highest eminence as a tragical performer, and surpassed all her contemporaries in parts requiring queenly dignity, deep pathos, or the vehement display of the fiercer passions. *D.* 1803.

Dumetose, *a.* [From Lat. *dumus*,] (*Bot.*) Resembling a bush; of bush-like character.

Dumfound, **Dumfounder**, *v. a.* To strike dumb with confusion, surprise, or other sudden emotion. (*Colloquial and vulgar.*)

Dumfries, (*dum-frēz'*), a co. in the S. of Scotland, bounded on the S. by the Solway Frith, E. Cumberland, N. Roxburgh, Selkirk, Peebles, and Lanark, and W. by Ayrshire and Kirkcaldy. *Area*, 1,129 sq. m. *Rivers*, The Annan and Nith. *Surface*, mostly mountainous; *soil*, suitable for pasturage. *Min.* Coal, lead, and freestone. *Manuf.* Unimportant. *Cap.* Dumfries.

— A burgh and seaport of Scotland, cap. of the above co., on the E. bank of the Nith, 64 m. S.W. of Edinburgh. *Manuf.* Hosiery, hats, baskets, leather, and shoes. *Erp.* Cattle, sheep, and grain.

Dumfries, in Virginia, a post-village of Prince William co., on Quantico Creek, abt. 90 m. N. of Richmond.

Dummer, in New Hampshire, a township of Coos co., on the Androscoggin River, abt. 100 m. N. by E. of Concord.

Dummerston, in Vermont, a post-village and township of Windham co., on the Connecticut River, abt. 100 m. S. of Montpelier.

Dummy, (sometimes written DUMMEY), *n.* A dumb person.

(*Games*.) In whist, the fourth or exposed hand when three persons play; as, to hold *dummy's* cards. — See WHIST.

— A dumb waiter. (Used as a colloquial contraction.) — A lay figure to show off clothing, mode of dressing hair, &c., exposed at shop-doors, or in the windows, to attract customers. — A sham copy of an original packet or package of any salable commodity; also, one whose exterior is belied by the contents.

(*Mach.*) A locomotive-engine worked by steam-condensers.

— *a.* Silent; mute; wanting, or not expressing in, speech. — Make-believe; fictitious; counterfeit; as, a *dummy* volume on a library shelf.

Dumont D'Urville, JULES SÉBASTIEN CÉSAR, (*door-reel'*), a French navigator, b. 1790. He was not merely a good sea-captain; he was a good botanist, entomologist, draughtsman, and writer, as may be seen from his interesting account of the French expedition of 1819-20 to the shores of the Archipelago and the Black Sea. As second in command to M. Duperré, in *La Coquille*, he visited Peru, China, Oceania, &c., and he brought home immense stores of both knowledge and specimens of natural history. In 1828 he was intrusted with a mission to discover, if possible, some traces of the unfortunate La Perouse. On his return he published a most interesting account, in which he pretty clearly proved that the shipwreck occurred off an island to the south of Santa Cruz. Being subsequently sent to approach as nearly as possible to the South Pole, he acquitted himself with his usual skill. We have from his pen, besides the narrative already mentioned, *A Picturesque Journey round the World*. This skilful and brave man was killed, with his wife and child, by the fatal Versailles railroad accident, 1842.

Dumontville, in Ohio, a post-office of Fairfield co.

Dumouriez, CHARLES FRANÇOIS, (*doo-moor'-e-ai'*), a French general, b. at Cambrai, 1739. He entered the army early in life, and at 24 years of age had received 22 wounds, and was made a knight of St. Louis. In 1772, Louis XV. sent him with communications to Sweden, but he was arrested, and for a long time confined in the Bastille. However, in 1789, we find him a principal director of the Jacobin Club, which was composed of all who aspired to be accounted the friends of liberty. He afterwards became a minister of Louis XVI., when he strongly advised the monarch to yield the direction of the interior affairs of the kingdom to the council of the assembly then sitting, and to declare war against the foreign foes of France. The advice was disregarded, and *D.* was dismissed. Still determined to devote himself to the service of the army, he proceeded to Valenciennes, where he soon gained immortal fame by his valor and his firmness, displayed at the head of the French soldiers, having succeeded La Fayette in the command of the army of the North. He rendered very important service to his country by the stand he so skilfully made against the Prussian invaders in the forest of Argonne, in Sept. 1792; the famous "Cannonade of Valmy" taking place on the 20th of the same month. His rapid conquest of Belgium followed. Notwithstanding his success, the Directory, not without motive, entertained suspicions regarding his designs. *D.* had entered into secret negotiations with the enemy, and on learning that an accusation of treason was to be brought against him, he, with several of his officers, fled to the Austrian headquarters. He refused, nevertheless, to serve against his country; wandered for some time through several parts of Europe, and lastly settled in England, where he d. 1823.

Dumons, **Dumose**, *a.* [Lat. *dumus*,] Bush-like; abounding with brushes, twigs, or briars; resembling a brake or thicket.

(*Bot.*) Possessing a bushy form.

Dump, *n.* [From *dumb*; Dan. *dum*, bell.] A dull, gloomy, morose state of the mind, in which one is disposed to be silent and reserved; despondency; melancholy; — generally used in the plural; as, she is in the *dumps*.

"A college joke to cure the dumps." — *Swift.*

— Absence of mind; pre-occupation of the intellect; reverie. — A sad, dismal, musical strain; as, "tune a deplorable dump." — *Shaks.*

—In England, a leaden disk used in playing chuck-farthing.
—*v. n.* To knock or fling down with a heavy, dull sound.
—In the United States, to throw down violently, as in emptying a cart by tilting it over; as, to *dump* a load of coals.
Dump'age, *n.* The privilege of dumping loads from carts, especially loads of refuse matter; also, the fee paid for such privilege.

Dump'ing-cart, *n.* A cart that may be tilted over, to free it from its contents.

Dump'ish, *a.* Dull; in the dumps; melancholy; dejected; the reverse of lively; as, a "dead, *dumpish*, and sour life." — *Herbert*.

Dump'ishly, *adv.* In a dull or dumpish manner.

Dump'ishness, *n.* State or condition of being dumpish.

Dump'ing, *n.* [From *dump*.] (*Cookery*.) A kind of thick pudding, or mass of paste, usually covering an interior of fruit; as, an apple-dumping.

Dump'lin Rock Light, in *Massachusetts*, a lighthouse on one of the Dumplin Rocks, in Buzzard's Bay. It shows a fixed light 43 ft. above the sea-level. Lat. 41° 32' 10" N., Lon. 70° 55' 40" W.

Dumpy, *a.* [Icel. *doomp*, a squat, thick-waisted servant-maid.] Squat; short and thick; lumpy; plenty in a small compass of size; as, "I hate a *dumpy* woman." — *Byron*.

Dum'mus, *n.* [Lat., *bunsh*.] (*Bot.*) A low and much-branched shrub.

Dun, *a.* [A. S.] Of a dark, dull color; of a dull brown color, resembling coffee; swarthy; as, a *dun* horse.

"*Dun* wreaths of distant smoke." — *Scott*.

—Gloomy; dark; obscure; as, the "*dunest* smoke of hell." — *Shaks*.

—*v. a.* To cure, as codfish, in order to impart to them a dull color.

Dun, *v. a.* [A. S. *dynan*, to din. See *DIX*.] To claim a debt from with clamor and importunity; to demand a payment from in a pressing manner; to call upon for payment repeatedly; to urge importunately for anything; as, "I shall be *dunning* thee every day." — *Bacon*.

—*n.* A clamorous, importunate creditor, who urges for payment.

"A *dun*, horrible monster! hated by gods and men." — *Philips*.

—An urgent request of demand for money, made in writing. — A mound. See *DUNE*.

Duna Veesse, a town of Central Hungary, 40 m. from Pesth; pop. 9,000.

Dun'bar, a sea-port town of Scotland, co. Haddington, 27 m. E. by N. of Edinburgh. *Manuf.* Cordage, sail-cloth, iron-foundries, and breweries. Pop. 3,977. — John Warren, Earl of Surrey, defeated John Baliol, in a great battle fought here, 1296, which for the time decided the fate of Scotland as a conquest of Edward I. In 1567 Queen Mary and Bothwell (*q. v.*) took refuge in the castle, which was afterwards demolished by order of Parliament. Cromwell gained a victory over the Scottish army at the Race of Dunbar, near this place, 1650, killing 4,000 men, and taking 10,000 prisoners.

Dun'bar, WILLIAM, an early Scottish poet, b. in Lothian, 1460. He wrote several beautiful effusions, among them the *Thistle and Rose*, and *Merle and Nightingale*. D. about 1520.

Dun'bar, in *Mich.*, a former P. O. of Grand Traverse co.

Dun'bar, in *Ohio*, a post-office of Washington co.

Dun'bar, in *Pennsylvania*, a post-borough of Fayette co., about 5 m. S. of Conneville.

—A township of Fayette co.

Dunbar'ton, in *New Hampshire*, a post-town of Merrimack co., about 10 m. S. by W. of Concord.

Dunbar'ton, in *Ohio*, a post-office of Adams co.

Dunbarton, in *S. Carolina*, a P. O. of Barnwell co.

Dun'-bird, *n.* (*Ornith.*) The POCHARD (*q. v.*).

Dun'can, ADAM, LORD, a British admiral, born in 1731. He early rose in the service, and distinguished himself under Admiral Keppel at the taking of Havana, and under Lord Rodney in his victory over the Spaniards and subsequent relief of Gibraltar. In 1795 he became commander-in-chief of the N. Sea fleet, and gained a decisive victory over the Dutch at Camperdown, June 11, 1797, for which he was created Earl of Camperdown, and granted a pension of £1,000 per annum. Died 1804.

Dun'can, in *Kentucky*, a post-office of Mercer co.

Duncan, in *Penn.*, a former P. O. of Allegheny co.

Dun'can Chan'nel, in *Alaska*, an inlet in Prince of Wales' Archipelago.

Dun'can Island, one of the Galapagos group of the Bahama Islands.

Duncan'non, a maritime village of Ireland, in Leinster co., Wexford, on Waterford Harbor, about 2 m. S. of Ballyhack. Pop. about 1,700. It was from here that James II., after the battle of the Boyne, embarked for France, in 1690.

Duncan'non, in *Pennsylvania*, a post-borough of Perry co., on the Susquehanna river, 14 m. N.W. of Harrisburg. Here are extensive rolling mills and iron works producing nails, hardware, pig iron, &c. Has other important industries. Pop. (1897) about 1,250.

Duncan'non, in *Ill.*, a former P. O. of Stephenson co.

Dun'cansby Head, the extreme N.E. headland of Scotland co., of Caithness, 1½ m. from John O'Groats' House; Lat. 58° 39' N., Lon. 3° 1' W.

Dun'can's Creek, in *North Carolina*, a former post-office of Cleveland co.

Duncan's Creek, in *South Carolina*, enters the Emoree river in Newberry co.

Duncan's Falls, in *Ohio*, a post-village of Muskingum co., on the Muskingum river, about 9 m. below Zanesville.

Duncan's Mills, in *California*, a P. O. of Sonoma co.

Duncan's Mills, in *Illinois*, a P. O. of Fulton co.

Dun'can's Mills, in *Iowa*, village of Mahaska co., on Skunk river, about 65 m. W.S.W. of Iowa City.

Duncan's Mills, in *Virginia*, a P. O. of Scott co.

Duncan's Retreat, in *Utah*, a hamlet of Kane co.

Dun'cansville, in *Pennsylvania*, a post-village of Blair co., about 3 m. W. of Hollidaysburg.

Duncansville, in *S. Carolina*, a village of Barwell dist., about 70 m. S.S.W. of Columbia.

Dun'canville, in *Georgia*, a village of Thomas co., about 212 m. S. by W. of Milledgeville.

Dunce, (*duns*), *n.* [From *Duns Scotus*, the great leader of the schoolmen, afterwards called *Duncmen*, who were violently opposed to classical learning.] One slow at learning; a person of limited or weak intellect; a thick-skull; a blockhead.

"How much a *dunce* that has been sent to roam,
Excels a *dunce* that has been kept at home." — *Couper*.

Dun'cery, *n.* Slowness at learning; dullness.

Dun'ciad, (*THE*) (*Lit.*) The name of a famous satire, written by Alex. Pope. See POPE.

Dunce'ial, (*dun'sik-l*), *a.* Like a dunce; thick-headed.

Dun'cish, *a.* Somewhat stolid or thick-witted.

Dun'cishness, *n.* Duncery; stupidity; blockishness.

Dundaff, in *Pennsylvania*, a post-borough of Susquehanna co., near Crystal Lake, about 10 m. N. of Carbondale.

Dundalk, (*dun-dawk'*), a sea-port town of co. Louth, Ireland, on the E. part of Dundalk Bay, 45 m. N. of Dublin. *Manuf.* Flax-spinning, pin and starch-making, &c. Edward Bruce, brother of Robert Bruce (*q. v.*), was slain in battle here. Pop. 10,000.

Dundalk' Bay, a shallow inlet of the Irish Sea, in co. Louth, Ireland, between the Cooley and Dunany Points. D. is about 8 m. in length, by about an equal breadth. It receives the rivers Dee, Fane, and Castle-town.

Dundas', HENRY, (VISCOUNT MELVILLE.) See MELVILLE, (VISCOUNT.)

Dundas', an E. co. of prov. of Ontario, bordering on the St. Lawrence river. Area, about 277 sq. m. *Rivers*, St. Lawrence. *Cap.* Cornwall. Pop. (1895) 20,132.

Dundas, a town of prov. of Ontario, co. of Wentworth, at the head of Burlington Bay, which is formed by the W. extremity of Lake Ontario. *Manuf.* Iron, machinery, soap, combs, woollen goods, &c.

Dundas, in *Illinois*, a post-office of Richland co.

Dundas, in *Minnesota*, a post-village of Rice co., about 10 m. N.N.E. of Faribault.

Dundas, in *Ohio*, a post-office of Vinton co.

Dundas, in *Wisconsin*, a post-office of Calumet co.

Dundas Island, off the E. coast of Africa, between the equator and Lat. 1° 30' S. — Also, a strait in N. Australia, 18 m. across, which separates Melville Island from Coburg Peninsula.

Dundee', a flourishing borough and sea-port of Scotland, in co. Forfar, on the Tay, 8 m. from the sea, and 37½ m. N.E. of Edinburgh. It is well built in its modern quarters, and the suburbs are adorned with elegant villas. It has a fine harbor, and splendid docks. *Manuf.* Osnaburghs and other coarse linens, canvas and bagging for export, and colored threads and gloves. D. possesses many shipyards, sugar refineries, tanneries, and machine-shops. The linen trade of D. is the largest in Great Britain.

Dundee, (VISCOUNT.) See GRAHAME.

Dundee, a vill. of prov. of Quebec, co. of Beauharnais, about 78 m. S. W. of Montreal.

Dundee, a village of prov. of Ontario, co. of Northumberland, abt. 19 m. W. of Brighton.

Dundee, in *Illinois*, a post-village and township of Kane county, on Fox River, about 48 m. N.W. of the city of Chicago.

Dundee, in *Michigan*, a post-village and township of Monroe co., on the Raisin River, about 15 m. above Monroe co.

Dundee, in *Missouri*, a post-office of Franklin co.

Dundee, in *New York*, a post-village of Yates co., abt. 190 m. W. by S. of Albany.

Dundee, in *Ohio*, a post-office of Tuscarawas co.

Dundee, in *Wisconsin*, a post-office of Fond du Lac co.

Dun'der, *n.* A term applied in the W. Indies to the lees of cane-juice used in the manufacture of rum.

Dun'derhead, **Dun'derpate**, *n.* A thick-skull; a dunce; a stupid person; as, the "formal *dunder-head*." — *Scott*.

Dun'-diver, *n.* (*Zoöl.*) See MERGUS.

Dundon'ald, THOMAS COCHRANE, EARL OF, a famous English admiral, b. 1776. At the age of 17, being then Lord Cochrane, he entered the navy, and in 1800 became commander of a sloop-of-war of 14 guns, with which he, in ten months, captured and destroyed 33 French and Spanish vessels of war, and in 1801, took by boarding, after a severe action, a Spanish frigate of 32 guns, off Barcelona. He afterwards distinguished himself by a series of dashing operations on the French coast, in cutting out vessels and storming land-batteries. In 1803, he led, in the depth of night, a fleet of fire-ships under the batteries of Basque Roads, and destroyed the French squadron lying at anchor under their protection; Lord Cochrane firing with his own hand a fire-ship containing 1,500 barrels of gunpowder. For this exploit he received the cross of the Order of the Bath. In 1807 he entered Parliament as member for Westminster, but speedily rendered himself obnoxious to the government by the outspoken liberalism of his political sentiments. In 1814, Lord Cochrane was made the dupe of some fraudulent stock-jobbers, and became involved in troubles resulting therefrom. He was tried for fraud, found guilty, and sentenced to pay a fine of \$5,000, and to suffer a year's imprisonment. The government gladly took advantage of this event to expel him from the House of Commons,

and also to deprive him of his professional rank and honors. Lord C., however, escaped from prison, and was again triumphantly returned to parliament at Westminster. In 1818, longing for a more active life, Lord C. accepted the chief command of the Chilean navy, and swept the Spanish fleet from the South American seas, becoming the mainstay of the young republic then fighting for its independence. He defeated a fleet after fleet sent out against him, and chiefly contributed to the ultimate success of the Chileans. He afterwards appointed by the Emperor, Don Pedro, commander-in-chief of the so-called Brazilian navy, consisting of two half-rotten vessels, with which he, however, managed to utterly annihilate a Portuguese squadron then blockading Rio de Janeiro. After thus freeing Brazil of the naval power of the Portuguese, the emperor created him *Marquis do Maranhao*. In 1827-8, Lord C. fought for the Greeks in the war of independence. In 1831, he succeeded his father as the tenth Earl of Dundonald. In 1847, Queen Victoria restored to the veteran his professional rank and dignities in the English navy, appointed him commander-in-chief of the N. Atlantic squadron, gave him the Grand Cross of the Bath, and created him Vice-Admiral of Great Britain. In 1854, he submitted a plan to the English government for the destruction of the Russian fleet, and the taking of a bastion, which was, however, not accepted. In 1857, he published the almost unequalled story of his adventurous life, in the *Autobiography of a Seaman*, by the Earl of Dundonald. D. in 1860, and buried in Westminster Abbey.

Dun'drum Bay, an arm of the Irish Sea, in the co. of Down, Ulster, between St. John's Point on the one and the Mourne Mountains on the S.W. Breadth of the bay about 10 m.

Dune, or **Down**, *n.* [Fr. *dune*; A. S. *dun*, a hill.] A small, conical, movable sand; they are met with along the sea-coast of Holland, Belgium, and the northern depts. of France, where they serve to protect the fertile land behind from the inroads of the ocean. They have been formed by the wind blowing great quantities of sand in whenever it sets dead on shore. A few kinds of grass, such as the *Carex arenaria* or Sea-carex, the *Festuca arvense* or Creeping fescue-grass, and the *Arundo arenaria* Sea-reed, grow on these sand-banks, and are of much benefit in binding the loose surface together. Sand-hillocks are to be found on the coasts of Brittany and Gascony, and also in some parts of Spain. They correspond with the English Downs. — See DOWN.

—In England, the term *dune* is applied to any elevated and slightly undulated table-land of some extent; as the Down of St. Austell; the Epsom Downs, &c.

Dunfermline, a manufacturing town of Scotland, 3 m. N. of the Frith of Forth, and 16 N. of Edinburgh. The palace here was a favorite residence of the Scottish kings. (*Manuf.*) Table linens, diaper damask, rope, tar, soap, tobacco.

Dun'fish, *n.* Prepared cod-fish of a dun, brown color. See DUN.

Dung, *n.* [A. S.; Swed. *dynga*; Dan. *dyng*, a pile of excrement.] The excrement of animals; — a manure; compost.

—*v. a.* To manure with dung; as, to *dung* a pasture. (*Manuf.*) In calico-printing, to steep in a bath of cow-dung, and warm water, as calico.

—*v. n.* To void excrement.

Dungan'non, a town of Ireland, co. Tyrone, 12 m. W. of Armagh. *Manuf.* Linens, earthenware, &c. Pop. 4,000. D. was the ancient seat of the O'Donnells of Tyrone, and *de jure* kings of Ulster, till 1606.

Dungan'non, in *Ohio*, a post-village of Columbus co., abt. 142 m. N.E. of Columbus.

Dungar'van, a sea-port town of Ireland, co. Wexford, on a bay of the same name. It exports grain, and cattle, but its main support is the herring fishery. Pop. abt. 5,886.

Dung'-beetle, *n.* (*Zoöl.*) A name commonly applied to many coleopterous insects of the *Scarabæidae*, which feed upon the dung of the animals, and for the most part live in it. They are also called Coprophagi (Gr., dung-eaters). *Gertrupes stercorarius* (Fig. 885) is an example.

Dungeon, (*dun'jon*), *n.* See DONJON.

—*v. a.* To imprison or keep in a dungeon.

Dungeness, (*dung'-ness*) a bold and commanding promontory in England, county of Kent, on the English Channel. It has a light-house. Lat. 50° 55' N., Lon. 0° 58' E.

Dung'-fork, *n.* A fork, usually with three prongs, employed to remove dung, as from a stable, to spread it over land.

Dun Glen, in *Nevada*, an unimportant mining village of Humboldt county, about 30 miles N.E. of Humboldt.

Dung'hill, *n.* A heap or mound of dung; — any mean or vile abode or situation.

"Every cock crows on his own *dunghill*." — *Eng. Proverb*.

—*a.* Sprung from the dunghill; mean; low; base.

"His *dunghill* thoughts no higher dare aspire." — *Spenser*.

Dung'tison, ROBLEY, an eminent American physician and medical author, b. at Keswick, England, 1791.

Fig. 885. — DUNG-BEETLE (*Gertrupes stercorarius*.)

19, he commenced the practice of medicine in London, and, in 1824, removed to the U. States, on his appointment to the professorship of medicine in the university of Virginia, which he held till 1833, when he accepted the chair of Materia Medica, Therapeutics, &c., in the latter university of Maryland. While in Virginia, he enjoyed the friendship of President Madison, to whom he dedicated his *Hæman Physiology*, published in 1832. In 1836, Dr. D. was elected to the newly-created chair of medicine, &c., in the Jefferson Medical College of Philadelphia. This post he honorably filled for more than 30 years; during a large portion of which time he was Dean of the Faculty. Besides the above, D. is author of many professional works of the highest value and character; among them may be mentioned here his *Directory of Medical Science*, of which a number of revised editions have been published from time to time, and which has been very largely employed as a standard text-book in many medical colleges; *Elements of Hygiene*; *General Therapeutics and Materia Medica* (1836); and *Næve Remens* (1839). He, besides, edited *Moynier's Formulary*, and *The Cyclopædia of Practical Medicine* of Drs. Forbes, Leedie, and Conolly. D. was a member of numerous literary and scientific societies, both European and American. D. 1862.

Dung-meer, Dung'mere, n. A manure-pit; a place in a farm-yard for the deposit of dung, compost, &c.

Dung'y, a. Full of dung;—hence, low; mean; base; worthless.

Dung-yard, n. A yard or place where dung is collected and piled up.

Dunham, in Illinois, a vill. and township of McHenry co., abt. 200 m. N.N.E. of Springfield.

Dunham, in Ohio, a post-township of Washington co., on the Ohio river, about eight miles below the town of Marietta.

Dunham's Basin, in New York, a post-office of Washington co., about 54 miles N. by E. of Albany.

Dunhard, or Duncard, in Pennsylvania, a post-village of township of Greene co.

Dunhard Creek, in Pennsylvania, enters the Monongahela River from Greene co.

Dunkerque, Dunkirk, (dun-kerk'), a fortified port-town of France, dep. Nord, 40 m. from Lille. It is, in general, well built, and has several churches, a theatre, concert-hall, hospitals, a college, public library, military prison, and is defended by a citadel. The churches are less remarkable for architecture than for paintings they contain. Large sums were expended by the French government on its harbor and docks; and it was agreed to demolish at the peace of Utrecht, their destruction was never completed, and at the end of 1753 they were restored. *Manuf.* Soap, starch, cordage.—In 1388 this town was burned by the English; after which period its possession was repeatedly contested by the French and Spanish. In 1658 it was given up to the English by Turenne; and, in 1662, by Charles II. to Louis XIV., for \$1,000,000. It made a free port in 1826. *Pop.* (1895) 39,480.

Dunkers, n. pl. (Ecl. Hist.) See TUNKERS.

Dunkusville, in Ohio, a post-office of Adams co.

Dunkirk, in France. See DUNKERQUE.

Dunkirk, in Ind., a post-town of Jay co. *Pop.* 1,200.

Dunkirk, in Maryland, a post office of Calvert co.

Dunkirk, in New York, a flourishing port of entry, a manuf. city of Chautauque co., on a bay of Lake Erie. *Pop.* (1897) about 11,000.

Dunkirk, in Ohio, a post-village of Hardin co., about 2 miles E. by N. of Lima.

Dunkirk, in Wisconsin, a village and township of co., about 20 miles S.E. of Madison.

Dunklin, in Missouri, a S.E. co., bordering on Arkansas, about 760 sq. m. *Rivers.* St. Francis and Missouri rivers. In the E. part is Lake Pemisicott. *Surface.* Mostly level; *soil.* Fertile in some parts. This co. was severely from the earthquakes of 1811 and 1812. *Cap.* Kennett. *Pop.* (1890) 15,085.

Dunlap, in Iowa, a post-town of Harrison co. *P.* 1,200.

Dunlap, in Ohio, a post-office of Hamilton co.

Dunlap, in Tennessee, a post-village, cap. of Sequatchee co., about 28 miles N. by W. of Chattanooga.

Dunlap's Creek, in Virginia, rising in Monroe co., flowing generally N. E. into the Jackson river at Covington.

Dunlapville, in Indiana, a post-village of Union co., at the E. fork of Whitewater river, about 70 miles S. of Indianapolis.

Dunleith, in Illinois, a former post-office of Jo Daviess co., on the Mississippi river, opposite Dubuque, Iowa.

Dunleith, in West Virginia, a post-office of Wayne co.

Dunlop, n. (Zool.) See TRINGA.

Dunlop, n. A rich, white sort of cheese, manufactured at Dunlop, in Ayrshire, Scotland.

Dunmore, in Pennsylvania, a post-borough of Lackawanna co., 3 miles E. N. E. of Scranton, on the Erie & Reading Valley R. R. Has extensive coal mines. *Pop.* about 9,800.

Dunmore, in W. Virginia, a P. O. of Pocahontas co.

Dunmore Bay, on the W. coast of Ireland, Lat. 52° Lon. 9° 35' W.

Dunmore Head, in Lat. 52° 6' N., Lon. 9° 35' W.

Dunow, a village of England, co. Essex, 12 miles N. of Chelmsford. This place is celebrated for an ancient custom which has prevailed from time immemorial of presenting a gammon of bacon to any mariner "who for a year and a day after their departure from their native country, or who have been sleeping or waking, of their state of wedlock." The "hitch of Bacon" is carried in triumphal procession and awarded to the successful competitors, who,

as may be surmised, are "few and far between." The Dunow hitch is mentioned in Langland's *Vision of Piers Plowman*, and also in Chaucer's *Wife of Bath's Prologue*. It is also the subject of an interesting novel by William Harrison Ainsworth, who, in 1855, himself presided at the ceremony, and awarded the "hitch" to two blissful couples. In 1859, the "hitch" again found a claimant, and two years later, no fewer than three cases of matrimonial felicity were proved entitled to it; among them the Chevalier de Châtelain, a well-known French literary gentleman, and his wife, a lady also known in the field of letters.

Dunn, in Illinois, a post-office of Moultrie co.

Dunn, in Wisconsin, a W. co.; *area*, about 864 sq. m. *Rivers.* Menomonic or Red Cedar, Chippewa, and Eau Claire rivers. *Surface.* Uneven; *soil.* Fertile. *Min.* Sandstone. *Cap.* Menomonie.

—A township of Dane co.

—A township of Dunn county, on the Menomonic River.

Dunnage, (dun'ij,) n. (Naut.) Loose brushwood, gunny-bags, &c., placed at the bottom of a ship's hold to raise heavy cargo from its immediate surface, and thus prevent damage by sea-water; also, loose articles of cargo placed or wedged between other and more bulky goods, to prevent friction during the rolling of the ship in a heavy sea.

Dunner, n. A dun: one employed to collect payment of small debts.

Dunnet Head, the N.E. head land of Great Britain, having on it a light-house 349 ft. above the sea. Lat. 60° 49' N., Lon. 3° 21' W.

Dunness, n. State of being partially deaf.

Dunning Creek, in Pennsylvania, enters the Raystown Branch of Juniata River from Bedford co.

Dunning's Mountain, in Pennsylvania, extending through Blair and Bedford cos., and into the State of Maryland.

Dunningsville, in Pennsylvania, a post-office of Washington co.

Dunnuish, n. Somewhat dun in color.

Dunn's Rock, in North Carolina, a former post-office of Transylvania co.

Dunn's Store, in Virginia, a former post-office of Caroline co.

Dunnstown, in Pennsylvania, a village of Clinton co., on the Susquehanna River, opposite Lock Haven.

Dunnsville, in New York, a P. O. of Albany co.

Dunnsville, in Virginia, a post-office of Essex co.

Dunnsville, in Wisconsin, a post-village of Dunn co., on the Menomonic River, about 13 m. S. of Menomonie.

Dunnu, a. Dull of apprehension; obtuse in mind; dilatory.

Dunois, JEAN, (doo'now,) COUNT DE LONGUEVILLE, and called *The Bastard of Orleans*, b. 1402, was an illegitimate son of the Duke of Orleans, and so successful was he in his military career, particularly in the share he bore in the expulsion of the English from France, that Charles VII. honored him with the title of *Restorer of his Country*. D. 1468.—This is the warrior alluded to in the opening line—

"C'était le jeune et brave Dunois"—

of the French imperial-national air "Partant pour le Syrie," which was composed by Queen Hortense (Beauharnais), the mother of Napoleon III.

Dunreith, in Indiana, a post-office of Henry co.

Duns Scotus, JOHN, a celebrated scholastic philosopher, and a Franciscan monk, b. about 1275. Whether he was a native of England, Scotland, or Ireland, is uncertain. He afterwards taught at Paris, and acquired the title of "Doctor Subtilis." He obtained extraordinary reputation by his defence of the dogma of the immaculate Conception of the Virgin. In philosophy he was the opponent of Thomas Aquinas, and the founder of a school named the *Scotists*: the followers of Aquinas being called *Thomists*. The former were "Realists," the latter "Nominalists." The works of D. S. form 12 vols. folio. D. soon after his arrival at Cologne, 1308. "Duns," as a term of reproach used by the Thomists, has become, with a modified meaning, the familiar "Dunce."

Dunsinane, (Hist.) The army of the usurper Macbeth was defeated at D., in Perthshire, 1054, by Malcolm, the eldest son of the murdered Duncan, assisted by an English force under Siward, Earl of Northumberland. Macbeth escaped to Lanphannan, where he was slain in 1056.

Dunstable, a town of England, co. Bedford, 18 m. S.W. of Bedford. *Manuf.* Straw plait. *Pop.* 4,117.

Dunstable, in Massachusetts, a post-village and township of Middlesex co., on the N. boundary of the State, about 30 m. N.W. of Boston; *pop.* abt. 500.

Dunstable, in Pennsylvania, a township of Clinton co., on the W. branch of the Susquehanna River, below Lock Haven; *pop.* abt. 475.

Dunstan (St.), Archbishop of Canterbury, and one of the greatest of ecclesiastical statesmen, b. at Glastonbury, England, of a noble family, was educated at its monastery, then famed as a seat of learning. His studies and accomplishments were very varied—mechanical, scientific, literary, and artistic. Brain-fever resulted from his over-application to study, and left behind it the belief that he had personal conflicts with the devil. The legend runs that his Satanic majesty on one occasion visited St. D. in the shape of a handsome female, when St. D., penetrating the identity of his tempter, plucked the tongs red-hot from the fire and with them grasped the devil's nose, so that he was but too glad to be suffered to depart with no worse punishment than a burnt proboscis. He became a favorite at the court of Athelstan, especially with the ladies, but falling under suspicion of magical arts, was subjected to the ordeal of

water and banished. A severe struggle ensued between affection and ambition: he was in love with a lady of the court, and he was urged to become a monk. He finally resolved to enter the Benedictine order, and became an anchorite at Glastonbury. In 943 he was named abbot, when he introduced the rule of St. Benedict, richly endowed the monastery, and made it at once a house of monks and of scholars. He was soon called to be one of the councillors of King Edmund, and in co-operation with the great Chancellor Thurketil and Archbishop Odo, set himself to carry out his principles of reform in church and state. He was the friend, as well as the minister, of Edred, and his power constantly increased. On the coronation of Edwy he disgraced himself by his violent conduct when sent by Odo to recall the young king to the banquet. He forced the crown from Edwy's head, and dragged him from his wife's bower to the hall. The subsequent horrible mutilation of the young queen was also the work of his agents. A reaction in the popular mind led to his retirement, and not being able to account for moneys which had come into his hands as treasurer of Edred, he was banished. Recalled in 957, he was made bishop of Worcester and of London, and in the following year, after two disappointments, archbishop of Canterbury. In the reign of the licentious Edgar, D. was virtually sovereign, and by his wise policy procured for Edgar the title of the *Pacific*. Many important measures of social as well as ecclesiastical reform were carried out under his direction. After the accession of Ethelred, D. retired to Canterbury, and devoted himself to his spiritual duties. D. at, and was buried in the cathedral of Canterbury, 988.

Dunter-goose, n. An English provincialism for the elder-duck.

Dunston, in Maine, a village of Cumberland co., abt. 9 m. S.W. of Portland.

Dunston, in Illinois, a post-village of Cook co., abt. 21 m. N.W. of Chicago.

Dunveg'an, a fort on the Peace River, British North America, in Lat. 56° 14' N., Lon. 117° 30' W.

Dunville, a village and river-port of prov. of Ontario, co. of Haldimand, on Grand River, abt. 35 m. W. by N. of Buffalo, N. Y.

Duo, n. [Lat. and It., two.] (Mus.) A duet.

Duodecahedron, a. See DUODECAHEDRAL.

Duodecahedron, n. Same as DUODECAHEDRON, *q. v.*

Duodecennial, o. [Lat. duodecim, twelve, and annus,

year.] Comprising twelve years.

Duodecimal, n. [Lat. duodecim, twelve.] (Arith.) Numbered by twelve.

D. scale. An operation or rule by which the contents of any surface or solid are estimated by multiplying together its linear dimensions, expressed in feet, inches, and lines. It is principally used by contractors and artificers in finding the contents of their work. Cross-multiplication is another term applied to the same system of calculation. As an example, supposed it were required to ascertain the superficial contents of a piece of timber 12 ft. 9½ inches long and 3 ft. 7 in. wide. In order to calculate this by the *D. S.*, one dimension must be put under the other, the feet being placed under the feet and the inches under the inches. The half inch is expressed in lines, 6 lines going to the half-inch, 12 lines to the full inch. In this calculation, ft. are considered as units of measure, and inches are so many twelfths of units. The units thus form the first place in the column, the twelfths the second, and the one hundred and forty-fourths the third. When the first line is multiplied by 3 feet, or 3 units, the result is 38 feet, $\frac{4}{12}$ of a foot, and $\frac{6}{144}$ of a foot. When the upper line is multiplied by $\frac{7}{12}$, the six lines are made equal to $\frac{1}{12}$ of a foot. The $\frac{9}{12}$ multiplied by $\frac{7}{12}$ are equal to $\frac{63}{144}$, which, added to the other, make $\frac{69}{144}$, or $\frac{5}{12}$ and $\frac{9}{144}$. 61½ is therefore placed in the third column, and the $\frac{5}{12}$ is carried forward. The ultimate result is as above, 45 sq. ft. and 120½ sq. inches. To practical men the operation described is much simpler than the explanation, and beginners have great difficulty in mastering it. The *D. S.* is not generally inserted in ordinary books of practical arithmetic.

Duodecimals, n. pl. (Arith.) A system of numbers the scale of which is twelve. (See above.)

Duodecimfid, a. [Lat. duodecim, and fimbria, to cleave.] Consisting of, or divided into, twelve parts.

Duodecimo, a. [Lat. duodecim.] Having or consisting of twelve leaves to a sheet; as, a book of duodecimo size.

—A book in which every sheet is folded six times, so as to make 12 leaves or 24 pages. It is usually abbreviated into 12mo.

Duodecuple, a. [Lat. duo, two, and decuplus, double.] Consisting of twelve; as, duodecuple proportion.

Duodenary, a. [Lat. duodenarius.] Twelve-fold; relating to the number twelve; multiplying by twelve; as, duodenary arithmetic.

Duodenum, [Lat. duodenus, consisting of twelve.] (Anat.) The name given to the first portion of the small intestine, and which was so called by the ancients because it was supposed not to exceed the breadth of twelve fingers; but as they dissected only animals, this does not hold true in the human subject. It is from 8 to 9 inches in length, and commences at the pyloric end of the stomach. It first inclines upward, backward, and to the right, and, having arrived near the neck of the gall-bladder, it bends vertically downwards, and again changes to a transverse direction, thus forming two

curves or angles. It is in this intestine that chylication of the food takes place. — See DIGESTION.

Duoliteral, *a.* [Lat. *duo*, two, and *literalis* — *litera*, letter.] Comprising two letters only.

Dupable, *a.* That may be duped or cajoled.

Du Page, in Illinois, a N.E. co.; area, about 340 sq. m. Rivers, E. and W. branches of Du Page River. Surface, mostly level; soil, very fertile. Cap. Naperville. Pop. (1890) 22,551.

—A township of Will co.

—A post-village of Will co., on Du Page River, about 14 m. N. of Joliet.

Dupauloup, FELIX ANTOINE PHILIBERT, Bishop of Orleans, a distinguished French prelate and theologian, b. 1802. After receiving his clerical education at Paris, he became, in 1827, confessor to the Duc de Bordeaux, and in 1830 filled a similar post to the Dauphin. In 1838, D. soothed the dying-bed of his friend, the great Prince de Talleyrand, and, in 1841, was elected to the chair of theology at the Sorbonne. Since 1849, he has been bishop of Orleans. In 1871 he entered the National Assembly. D. Oct. 12th, 1878.

Dupe, *n.* [Fr. See the verb.] A person who is cheated, deceived, or humbugged; one who is easily led astray by his credulity.

—*v. a.* [Fr. *duper*.] To deceive; to cheat; to trick; to cajole; to humbug; to mislead by imposing on one's credulity; as, to *dupe* a confiding woman.

Dupery, *n.* Art, act, habit, or practice of making dupes.

Dupin, ANDRÉ MARIE JEAN JACQUES, (*dōō'pang*.) a distinguished French jurist and statesman, b. at Varyz, dep. Nièvre, 1782. He was familiarly known as *Dupin L'aine*, being the eldest of three brothers, all of whom obtained distinction; and of whose mother it is related that she desired no other epitaph than this—*mother of the three Dupins*. André was brought up to the law, and was called to the bar in 1802. He rose to high reputation in his profession, and in 1811 was named member of the commission appointed for the classification of the laws of the empire. In May, 1815, he was elected deputy to the Chamber of Representatives, and with great firmness and independence resisted the last efforts of Napoleon and his adherents to save the empire. He supported the Restoration, but was soon driven by the follies and tyranny of the government to become its stout and persistent opponent. His greatest reputation as advocate was won in those days when he was the zealous and powerful defender of the freedom of the press, and of the adherents of the fallen dynasty who were subjected to prosecution. He took part with the two Berrys in the defence of Marshal Ney; defended Sir Robert Wilson and his associates, who aided the escape of Lavalette; and among others also defended Gen. Savary, De Pradt, and the popular poet Béranger. One of his most celebrated efforts was the successful defence of the *Journal des Débats*, in 1829. He remained a popular leader throughout the reign of Charles X., and was the vigorous opponent of the Polignac ministry. In the measures for the elevation of Louis Philippe, Duke d'Orléans, to the throne, he took an influential part; and the king, whose consulting lawyer he had been since 1820, rewarded him with the appointment of Procureur-Général to the Court of Cassation, which he held for twenty-two years. He was a firm supporter of the government, and made himself unpopular by condemning revolutionary excesses. In 1832 he was chosen president of the Chamber of Deputies, and was annually re-elected till 1840. At the revolution of Feb., 1848, it was D. who presented the young Comte de Paris to the Chamber of Deputies, and proposed his election as king under the regency of the Duchess of Orleans. He was an active member of the Constituent, and afterwards of the Legislative Assembly; and was president of the latter. He remained passive at the Coup d'Etat of 2d Dec., 1851, but on the confiscation of the property of the Orleans family, he resigned his post of Procureur-Général, and retired from public life. To the surprise of his friends he resumed it, and became a senator in 1857; thus lending the weight of his name and character to the system of Napoleonic imperialism. He justified his position by saying that he had ever belonged to France, but never to any political parties. D. was Grand Cross of the Legion of Honor from 1837, member of the French Academy since 1832, and member of the Institute. D. at Paris, 1865.

D., CHARLES, BARON, brother of the above, b. 1784. He entered the French navy in 1803, as an engineer, and became professor of mechanics and the physical sciences in the Ionian Academy, which he assisted in forming, at Corfu. In 1812, he returned to Paris, and, in 1813, instituted the Maritime Museum at Toulon. He was a member of the Chamber of Deputies from 1828, and when the change of 1848 was effected, he became a representative in the Constituent assembly, and also in the Legislative Assembly. After the revolution of 1851, he became a senator. He has written a great number of important works connected with the science of engineering. D. 1873.

Du'pion, *n.* [Fr. *doupion*.] The double cocoon woven by silk-worms.

Duplain, in Michigan, a post-township of Clinton co.; pop. about 900.

Duplainville, in Wisconsin, a P.O. of Waukesha co.

Duple, *a.* [Lat. *duplus*.] Double; as, a *duple* ratio.

Duple ratio, (*Math.*) See RATIO.

Du'plex, *a.* [Lat., from *duo*, two, and *plicare*, to fold.] Double; twofold; as, a *duplex* escapement.

Duplex ratio, (*du'pleks rā'she-o*.) *n.* (*Math.*) The ratio of the squares of two quantities, or the square of their ratio.

Du'plex-lathe, *n.* (*Mech.*) In turnery, a lathe working two turning tools at one and the same time.

Duplex-watch, *n.* (*Horol.*) A watch having a duplex escapement. See HOROLOGY.

Duplicate, (*dū'pli-kāt*.) *a.* [Lat. *duplicatus*, from *duplico*—*duo*, and *plico*, to fold.] Double; twofold; duplex; as, *duplicate* numbers.

—*n.* A double or second copy; a copy; a transcript; as, a *duplicate* of a letter. — Another corresponding to the first, or a second thing of the same kind; as, a *duplicate* key.

—*v. a.* [Lat. *duplico*, *uplicatus*.] To double; to fold; to make a transcript or counterpart of; as, to *duplicate* ideas.

Duplica'tion, *n.* [Fr., from Lat. *duplicatio*.] Act of doubling; a fold; a doubling; the multiplication of a number by two; as, the *duplica'tion* of a cube.

Duplica'tion of the cube. (*Math.*) The operation of finding a cube, the value of which is equal to double that of a given cube.

Duplicative, *a.* Having power or disposition to double or duplicate.

Duplicature, *n.* [Fr.] A fold; anything doubled; as, *duplicature* of the membrane.

Duplicity, (*du'plis'e-ty*.) *n.* [Fr. *duplicité*, from L. Lat. *duplicitas*, from Lat. *duplex*, double.] Doubtfulness of heart or speech; act of dissembling one's real opinion, with a design to mislead; double-dealing; dissimulation; deceit; guile; deception.

Duplin, in North Carolina, a S.E. co. Area, 828 sq. m. Rivers. North branch of Cape Fear river, and Goshen creek. Surface, level; soil, mostly sandy, but fertile near the larger streams. Cap. Kenansville. Pop. (1890) 18,690.

Dupont, JACQUES CHARLES, (styled *d' l'Eure*.) a leader of the French liberal party, b. at Neubourg, 1767. In 1813 he became a member of the legislative body, and acted as vice-president when this assembly was convoked by Louis XVIII. on the fall of Napoleon. During the Hundred Days he was elected to represent the department of Eure, and, after the battle of Waterloo, became vice-president of the Chamber of Representatives. After the revolution of 1830, he was appointed Minister of Justice, but at the end of six months sent in his resignation, and took his place in the ranks of the opposition. After the revolution of 1848, during the session of the 24th February, D. took the president's chair, and so far silenced the tumult of the populace, as to render it possible to appoint a provisional government of which he was proclaimed president. His political friends styled him the most virtuous among the virtuous, the Aristides of French liberalism. D. 1855.

Dupont, in Indiana, a post-village of Jefferson co., abt. 14 m. N.W. of Madison.

Dupont, in Ohio, a post-office of Putnam co.

Dupont, in Wisconsin, a township of Waupaca co.

Düppel, **Düppelu**, or **Dyb'böl**. (*Hist.*) This village of Schleswig, separated from the island of Alsens by a narrow sound, has been the scene of several conflicts in the struggles for the settlement of the Schleswig-Holstein question. (See DENMARK.) Here the Danes defeated the Prussians, May 28, 1848, and compelled them to retreat to Gravenstein. A second engagement took place June 5, 1848, when the Danes were driven from their position, which, however, they regained June 6. It was carried by an assault of the Saxons and Bavarians, April 13, 1849. — The bulk of the Danish army having taken up its position at Düppel, Feb. 6, 1864, the village was besieged by the Prussians, who commenced a bombardment, March 15, which terminated in the defeat of the Danes, April 18.

Du Pont, SAMUEL FRANCIS, an American rear-admiral, b. at Bergen Point, N. J., 1803. He was commissioned a midshipman when 12 years old. During the Mexican war, being then a commander, he saw much active and gallant service on the California coast. In 1856 he was made a captain, and the following year was placed in command of the steam-frigate Minnesota, which conveyed Mr. Reed, the American minister, to China. In 1862 he was put in command of the S. Atlantic blockading squadron. He sailed from Fortress Monroe, Oct. 29, in his flag-ship the Wabash, accompanied by a fleet of 50 sail; reached Port Royal Nov. 5, and two days after attacked two strong forts, on Hilton Head and Bay Point, which were evacuated after a severe engagement of four hours. This distinguished officer was nominated rear-admiral in Aug., 1862. He has greatly contributed to the organization of the Naval School at Annapolis, and is the author of a very remarkable report on the use of floating-batteries for coast-defence. D. 1865.

Dupuis, CHARLES FRANÇOIS, a French philosopher, b. near Gisors, 1742. His celebrated work, *Origine de tous les cultes, ou la religion universelle*, originated the scientific exploration of Egypt in the period of its occupation by Bonaparte. D. 1796.

Dupuytren, GUILLAUME, BARON, (*doo-moe'tren*.) b. in Limousin, 1777. One of the most distinguished surgeons of modern times, and an eminent example of the beneficial results of the system of public competition established in France. By his industry and talents he became surgeon to the Hotel Dieu at twenty-six, and professor of surgery at thirty-three. He visited the hospital morning and evening at six o'clock, and for 12 years was never once absent; each morning he attended to 300 patients, delivered a clinical lecture, performed several operations, gave advice to some hundreds of outpatients, and then walked home to breakfast at half-past ten. After this he saw his private patients, attended to the examination of medical students, performed his private operations, and at six in the evening again went the rounds of the hospital. His principal

work is his memoir on artificial anns, which forms happy application of the principles developed by J. Hunter. D. possessed a remarkably fine person, a strong constitution, so as to enable him to undergo immense bodily fatigue. But he possessed an extremely irritable temper, which made him insupportably capricious and inconsistent, often impelled him to rash and wrong acts that he would fain have recalled in his cool moments, and ultimately destroyed his nervous system. He was a most successful practitioner, having \$1,500,000 to his only daughter, besides numerous dowryments connected with his profession. D. 1835.

Duquesne, ABRAHAM, MARQUIS, (*doo-kain'*.) a celebrated French seaman, first went to sea under his father who was in the service. He distinguished himself at an early age, that at 17 he had the command of a vessel, in which he fought several successful actions with the Spaniards. In the troubles which occurred in France during the minority of Louis XIV., he was in the service of Sweden, and defeated the Danish fleet commanded by King Christian IV. Recalled to France in 1647, got together a squadron at his own expense, and engaged several times both with the English and Spanish. In the French war of 1672 with Holland, Louis XIV. sent him against De Ruyter, and D. defeated him in a terrible engagement near Messina, in 1676. Afterwards gained great successes against the pirates of the Mediterranean, and humbled the dey of Algiers. He was a Protestant, Louis XIV. did not raise him to those high positions which his services entitled him to, and thus he never became an admiral. D. 1688.

Duquesne, in Pennsylvania, a post-borough of serve township, Alleghany co.

Duquesne, in Pennsylvania, a fort formerly occupying the site of Pittsburgh, *q. v.*

Duquoin, in Illinois, a city of Perry co., 77 miles N. Cairo; has extensive coal mines. Pop. (1897) abt. 4,000.

Dur, *a.* [Ger., from Lat. *durus*, hard, firm, vigorous.] (*Mus.*) Major; in the major mode; as, *C dur*, that is, C major.

Durability, *n.* [Lat. *durabilitas*.] Quality of being durable; power of lasting or continuing uninterruptedly in any given state, without perishing; as, the *durability* of the Roman Catholic Church.

Durable, *a.* [Fr., from Lat. *durabilis*, from *dur*, last, from *durus*, hard; W. *dur*, steel; *durau*, to harden.] Not easily penetrated; lasting; continuing; having a quality of continuing or remaining long in being, without perishing or wearing out; permanent; firm; strong; constant; as, a *durable* condition, a *durable* coat, &c.

"Words more durable than brass." — Swift.

Durableness, *n.* Power of lasting; continuance; permanence in one condition; durability; as, the *durableness* of metal.

Durably, *adv.* In a lasting manner; with long continuance or prolonged permanence.

"His fame engraved durably in men's memories." — Sidney.

Dura Mater, *n.* [Lat., hard matter.] (*Anat.*) the external and strongest membrane of the brain. It is a white, tough, fibrous membrane, that covers the whole internal cavity of the skull, and sends out folds or processes which divide the brain into lobes, spheres, and part the brain proper from the cerebellum or small brain, and at the same time form channels or sinuses for the venous blood returning from the brain, and which eventually terminate in the jugular vein. See BRAIN, and MENINGITIS.

Dura'men, *n.* [Lat., hardness.] (*Bot.*) The thick, formed central layers of the wood of Exogenous plants, which is called in common language the *heart wood*. It is the sap of wood solidified by the introduction of various secretions into the interior of the cells or tubes of such wood is composed.

Durance, *n.* [O. It. *duranza*, from Lat. *durare*, to last, length of time.] Continuance; duration; endurance. "Of how short *durance* was this new-made state." — Dryden.

—Restraint of the person; imprisonment; custody; as, a *durance* jailer; as, "Base *durance* and contagious prison." — Shakespeare.

Dura'nce, **Dura'nt**, *n.* [Fr. *durant*.] A sort of heavy, stout cloth, resembling buckskin leather, formerly used for men's wearing apparel; as, "a good *dura'nce*." — J. Webster.

Durance, a river of France, rising in the Alps, joining the Rhone between Avignon and Tarascon, a course of 170 miles.

Durand, or DURAND STATION, in Illinois, a post-village of Winnebago co., abt. 16 m. S.W. of Beloit.

Durand, or DURANT, in Iowa, a post-town of Cedar co., about 19 miles N.W. of Davenport.

Durand, in Wisconsin, a city, cap. of Pepin co., on the Iowa river, 16 miles N.E. of Pepin. Pop. (1895) 1,200.

Durango, a central dept. or state of the Mexican federation, lying between Lat. 23° 37' and 27° 48' N. and Lon. 102° 30' and 107° 17' W. Area, about 48,000 sq. m. Surface, mountainous and rocky, being traversed by the Sierra Madre. Rivers, Rio-de-las-Naves, Conchas, and Rio Parras. Soil, mostly barren and for pasturing, except along the streams, where it is extremely rich and fertile. Min. Gold, silver, iron, suffers greatly from the incursions of several Indian tribes, especially the Comanches (*q. v.*). Cap. Durango. Pop. (1895) 196,852.

—A town, cap. of the above dept., on a branch of the Rio Grande River, 7,295 feet above the level of the sea. Lat. 24° 25' N., Lon. 103° 34' 37" W. D. contains churches and convents, a mint, and numerous mills and cotton manufactures. It has trainways and telephones, and much improved of recent years. Pop. about 27,000 in 1897.

Duran'go, in *Colorado*, a city, capital of La Plata co., situated in the middle of the picturesque valley of the Animas river, above 450 m. S.W. of Denver. Founded (Sept. 1880) in a rich mining district, *D.* became at once the commercial and smelting center of the entire San Juan region. Pop. (1897) about 3,000.

Durante, *a.* [Lat., from *durare*.] During; as, *durante vita*, during life.

Durate, (*du-ra'tā*), *a.* [It., from Lat. *durus*.] (*Mus.*) Harsh and repellent to the ear.

Duration, (*du-rā'shun*), *n.* [Lat. *duratio*.] Continuance in time; length or extension of existence indefinitely; as, the *duration* of human life. — Power of continuance; permanency; as, the *duration* of a partnership.

Durazzo, (*duo-rat'sō*), (*Anc. Durrachium*). A fortified town of Turkey in Europe, on the E. shore of the Adriatic, in Lat. 41° 17' 32" N., Lon. 19° 26' 44" E.; pop. 6,480.

Dur'bar, *n.* [Hind. *darbār*.] In Hindostan and Persia, a court of audience held by a monarch or ruler of a state or territory; — hence, the audience or reception itself; as, the Nizam received the Governor-general in full *darbar*.

Durbin's Corners, in *Ohio*, a village of Williams county.

Dure, *a.* [From Lat. *durus*, harsh.] Toilsome; difficult; hard to bear or endure; rough; as, "Life is *dure* and rude." — *W. H. Russell*.

Durell, in *Pennsylvania*, a post-township of Bradford county, on the Susquehanna River, below Towanda.

Du'ren, (*anc. Marcodurum*), a town of Prussia, on the Roer, 15 m. from Aix-la-Chapelle. *Manuf.* Woollens, paper, leather, iron and steel wares.

Dürer, (*du'r'er*), ALBRECHT, the greatest painter of Germany, born in Nuremberg, 1471. He was a pupil of Michael Wöhlgenuth in his native city, and afterward travelled through Germany, the Netherlands, and Italy, in order to perfect himself in his art. His singular and powerful genius soon gained him an eminent rank among the first artists of his period, and challenged the admiration even of Raphael. While the latter was the confessed head of the classic school, *D.* was the leading representative of the Gothic type of art. His paintings evince a deep appreciation of the sublime and solemn, although he sometimes permitted himself to be unduly influenced by his tendency to the fantastic. Among his grandest works are, the *Adoration of the Trinity*; *Christ taken from the Cross*; the *Adoration of the Wise Men of the East*; and the *Assumption of the Virgin*. His fame as an engraver is hardly less than that of painter;

Fig. 886. — ALBRECHT DÜRER.

among his best works in this branch of art are, *Melancholy*, *St. Jerome*, and *The Knight, Death, and the Devil*. *D.* was appointed court-painter by Maximilian I., and afterwards by Charles V. When the Reformation came to pass, he embraced the new doctrines with fervor, and became the firm friend and admirer of Luther and Melancthon. Soon after this change of faith he produced his two paintings, *St. John and St. Peter*, and *St. Mark and St. Paul*, which are among his very best, as they were among his last performances. Died at Nuremberg, 1528. See *Life of D.*, by Thansing (Lond., 1877).

Duress, *n.* [O. Fr. *duresse*, from *dur*.] Constraint; imprisonment; duance; restraint of liberty. (*Law*.) *D.* is of two kinds.—*duress of imprisonment*, which is imprisonment or restraint of personal liberty, and *duress by menace or threats*, as when a person is intimidated by the fear of loss of life or limb. Fear of battery, however, is no *D.*, therefore, is imprisonment, or threats intended to compel a person to do a legal act.

a. To hold in duress or duance; to imprison. (*R.*)

Duress'or, *n.* (*Law*.) One who subjects another to duress.

Durga, *n.* (*Hind. Myth.*) Same as DOORGA, *q. v.*

Durham, JOHN GEORGE LAMBTON, EARL OF, an English statesman, b. 1792. He was a Whig in politics, and supported both Mr. Canning's government and that of Lord Goderich. On the accession of Earl Grey to power, Mr. Lambton was elevated to the peerage, and became Lord Privy Seal, and subsequently, on laying down the seals, was further advanced to the dignity of *Earl of Durham*. Besides taking a leading part in the

Reform Bill, the Earl was twice sent to the Russian Court in the quality of ambassador, and afterwards to Canada as Governor-General, from whence, in consequence of some misunderstanding with the home govt., he returned abruptly, and d. 1840.

Dur'ham, a marit. co. of England, having E. the German Ocean; N., Northumberland; W., Cumberland and Westmoreland; and S., Yorkshire. *Area*, 973 sq. m. *Rivers*, Tyne, Tees, Wear, Skerne, and Derwent. *Surface*. In some parts mountainous, and with valleys and moors in others; *soil*, mostly unfertile. *Prod.* Mustard, and the usual kinds of grain. *Min.* Coal, lead, iron, and grindstones. *Manuf.* Cordage, glass, earthenware, and ship-building. *Cap.* Durham. *Chief towns*, Sunderland, Gateshead, S. Shields, Darlington. Pop. (1895) 1,150,506.

—A town, cap. of the above co., on the Wear, 230 m. N.W. of London. *D.* has a university originally founded by Cromwell and re-established in 1831. *Manuf.* Mustard, woollens, hats, iron and brass goods. Pop. (1895) 15,200.

Dur'ham, a S. co. of prov. of Ontario, bordering on Lake Ontario. *Area*, about 620 sq. miles. *Cap.* Port Hope. Pop. (1895) 32,848.

Dur'ham, or ST. FRANCIS, a village of prov. of Quebec, co. of Drummond, on the St. Francis river, about 56 m. S.E. of Port St. Francis.

Dur'ham, or ORNSTOWN, a village of the province of Quebec, county of Beauharnais, about 45 miles S.W. of Montreal.

Dur'ham, in *Connecticut*, a town and township of Middlesex co., about 24 m. S. of Hartford.

Durham, in *Florida*, a former P. O. of Columbia co.

Durham, in *Illinois*, a post-township of Hancock co., about 14 m. S. of Burlington, Iowa.

Durham, in *Maine*, a post-town and township of Androscoggin co., on the Androscoggin river, about 80 m. S.W. of Augusta.

Durham, in *North Carolina*, a thriving city, cap. of Durham co., 26 m. N.W. of Raleigh, noted for its very extensive manufactures of tobacco; has also cotton and woolen mills, and fertilizer factories. From a village of 250 in 1870, it has grown (1897) to a city of nearly 8,000 inhabitants.

Durham, in *N. Hampshire*, a post-town of Strafford co.

Durham, in *New York*, a post-town of Greene co., on Catskill creek, about 30 m. S.W. of Albany.

Durham, in *Pennsylvania*, a post-township of Bucks co., on the Delaware river, about 50 m. N. of Philadelphia.

Durham Creek, in *Pennsylvania*, enters the Delaware river from Bucks co.

Durham Hill, in *Wisconsin*, a former post-office of Waukesha co.

Durhamville, in *New York*, a post-village of Oneida co., about 125 m. W.N.W. of Albany.

Durhamville, in *Tennessee*, a post-village of Lauderdale co., about 190 m. W. by S. of Nashville.

Dur'ing, (*ppr. of dure*, an obsolete verb.) *prep.* For the time of the continuance of; as, *during* the day.

Du'rio, *n.* [From Malay *dury*, thorny.] (*Bot.*) A genus of plants, ord. *Stroculaceae*. The species *D. zibethinus* yields the fruit called the durion, which is highly esteemed in the S.E. parts of Asia, being accounted next in value to the delicious mangosteen. (See GARCINIA.) It has, however, a strong smell, which renders it disagreeable at first to those unaccustomed to it; but the dislike to this smell is generally soon overcome.

Du'rio, *n.* [Malay.] (*Bot.*) The fruit of the *Durio zibethinus*. See DURIQ.

Du'riety, *n.* [Lat. *duritas*.] Hardness; firmness; endurance; as, indissoluble *durity*.

Dur'keeville, in *Idaho*, a village of Nez Percé co., about 30 m. E. of Lewiston.

Dürk'heim, a town of Rhenish Bavaria, on the Isenach, 18 m. N. of Landau; pop. 5,388.

Dur'lach, a town of the grand-duchy of Baden, on the Pfalz, 3 m. E.S.E. of Karlsruhe; pop. 5,175.

Dur'lach, in *Pennsylvania*, a post-village of Lancaster co., about 35 m. E.S.E. of Harrisburg.

Du'roe, in *California*, a village of El Dorado co., about 35 m. E. by N. of Sacramento.

Du'roe, in *Missouri*, a post-office of Benton co.

Durra, *n.* See HOLCERS.

Dürrenstein, (*dur'ren-stine*), a village of Lower Austria, on the Danube, abt. 40 m. N.W. of Vienna. It

Fig. 887. — CASTLE OF DÜRRENSTEIN.
(The prison of Richard Cœur-de-Lion.)

contains the ruins of the castle in which Richard Cœur-de-Lion was kept a prisoner for 15 months by the Archduke Leopold of Austria (1193-94). Here, also, the Austrians and Russians under Kutusoff, were defeated by the French under Mortier, Nov. 1805. Pop. 485.

Duroe, MICHAEL, (*duo'rok*), DUKE DE FRUITI and Marshal of France, was b. 1772, and entered the army in 1792. Being subsequently appointed aide-de-camp to Bona-

parte, he accompanied him to Egypt, where he eminently distinguished himself, and was severely wounded by the bursting of a howitzer. On the formation of the imperial court in 1805, he was created grand-marshal of the palace; and was afterwards employed in diplomatic missions, though he still took his full share of peril and glory in the wars of France, till the time of his death, which happened at the battle of Wurtzchen, in 1813. Napoleon, who was firmly attached to *D.*, wept over him on his death-bed; and perhaps he never had to lament the loss of a more faithful friend or a braver soldier.

Durr'-See, a lake of Switzerland, 38 m. from Berne, and 4,000 ft. above sea-level.

Durst, *imp.* of DARE, *q. v.*

Durwaz, (*door-uaz'*), a mountainous territory of Tartary, inhabited by the Tajiks, in Lat. 37° N., Lon. 71° E. It is very mountainous, but grows and manufactures cotton for export. *Pop.* unascertained.

Duse, *n.* See DETUCE.

Dushore, in *Pennsylvania*, a post-town of Sullivan county, 20 m. S. of Towanda.

Dusk, *a.* [A. S. *throstrig*, dark; L. Ger. *düster*; Du. *duister*.] Dark, dim, or obscure; tending to darkness, or moderately dark; inclining to a dark or black color.

—*n.* A tending to darkness; incipient or imperfect obscurity; a middle degree between light and darkness; twilight; as, the *dusk* of the evening. — Tending to a black color; darkness of color or complexion.

Dusk'ily, *adv.* With partial darkness; with a tendency to darkness or blackness.

Dusk'iness, *n.* State of being dusky; moderate degree of darkness.

Dusk'y, *a.* Obscure or dim in color; tending to darkness in color; partially black; dark-colored; not bright or vivid; as, a *dusky* red, a *dusky* savage. — Partially dark or obscure; inclining to darkness; not luminous; tending to opacity; as, a *dusky* glen. — Gloomy; sad; melancholy; as, "this *dusky* scene of horror." (*Bentley*.) — Intellectually clouded; as, "a *dusky* spirit." (*Byron*.)

Dus'seldorf, the cap. of a district of same name, prov. of the Rhine, Prussia; situate at the confluence of the Düsseldorf with the Rhine, 23 m. N. of Cologne, and 310 S.W. of Berlin. The city is divided into the *Altstadt* (old town), the *Karlstadt* (Charles's town), the *Friedrichsstadt* (Frederick's town), and the *Neustadt* (new town). It contains many beautiful parks, the *Hofgarten* being one of the finest in Germany. The principal public buildings are the Governor's Palace, the City-Hall, the Palace of Justice, the Cabinet of Antiquities, and St. Andreas' and St. Lambert's churches. There is also a gymnasium, a polytechnic school, a commercial college, an academy of painting, and a theatre. The most prominent feature of *D.*, however, is the celebrated Art Gallery, containing a vast number of water-color drawings, engravings, and casts. The grand works of the Flemish and Dutch masters, which formerly adorned this gallery, were transferred to Munich in 1805. *D.* is a great focus of steamboat and railroad communication, and the transit trade on the Rhine is here very brisk. *Manuf.* Cotton goods, tapestry, mustard, leather, carriages, and tobacco. Under Napoleon I., *D.* was incorporated with France, but, in 1815, it was re-united with Prussia.

Dust, *n.* [A. S. *fris*, Scot., and Icel. *dust*; Sansk. *tusta*, dust.] Dry particles of earth, or other matter, so finely attenuated as to be susceptible of being moved or wafted by the wind; powder; fine, dry atoms of earth; anything finely pulverized; as, a cloud of *dust*.

"Hearts as dry as summer dust." — Wordsworth.

—Earth; unorganized earthy matter; — hence, the grave; the earth, as man's last resting-place.

"The actions of the just smell sweet, and blossom in the dust." — Shirley.

—A mean and dejected state or condition.

"To the vile dust, from whence he sprung." — Scott.

—Triturated particles of gold; gold-dust; — hence, money; specie; as, down with the *dust*, i. e., pay the money. (Used colloquially.)

"If you like the security, down with the dust." — Swift.

(*Script.*) Two remarkable instances of casting dust recorded in Scripture seem to illustrate a practice common in Asia: those who demanded justice against a criminal were accustomed to throw dust upon him, signifying that he deserved to be cast into the grave. Shimei cast dust upon David when he fled from Jerusalem. (2 Sam. xvi. 13.) The Jews treated the apostle Paul in a similar manner in the same city: "They cried out, 'Away with such a fellow from the earth; for it is not fit that he should live.' And as they cried out, and cast off their clothes, and threw dust into the air, the chief captain commanded him to be brought into the castle." (Acts xxii. 22-24.) To shake off the dust of the feet against another was expressive of entire renunciation. (Matt. x. 14; Mark vi. 11; Acts xiii. 51.) The threatening of God, recorded in *Deut.* xxviii. 24, "The Lord shall make the rain of thy land powder and dust: from heaven shall it come down upon thee, until thou be destroyed," means that, instead of fertilizing rain, clouds of fine dust, raised from the parched ground and driven by fierce and burning winds, shall fill the air.

(*Meteor.*) When a ray of sunlight enters a partially darkened apartment through any small aperture or chink in the shutters, or when a flood of intensely brilliant light from the same source pours into a room through Venetian blinds or other means taken to exclude it to a certain extent, we can distinctly see small particles of various substances, familiarly called *motes*, floating about in the track of the sunbeam, and moving with greater or less rapidity, according to the extent to which the air is agitated in which they are suspended. Under ordinary circumstances these motes, or *atmos-*

pheric dust, are invisible to human sight, being so minute that they can only be seen under the conditions that have been mentioned, through the reflection of strong sunlight from their surface, or by the aid of a powerful microscope. But, whether they are visible to us or not, they are always present in the atmosphere that we breathe; and it is considered that the lower strata of the air immediately in contact with, and above, the surface of the earth, are constantly impregnated with these small particles, of unappreciable weight and size, that are fragments of various organic and inorganic substances, that have been worn away from the bodies of which they originally formed a part, by friction and other causes. Scientific meteorologists ascribe the suspension of these small particles to the internal friction of the air, the resisting power of which increases very rapidly in proportion to the diminution of the particles themselves; that is to say, that, supposing we have two very small particles, one being the 1,000th part of an inch in diameter, and the other the 10,000th part of an inch, the power of the air to sustain the latter would be a hundred times greater than it would be to keep up the former, although the diameter of the smaller particle has only been diminished to the tenth part of the greater one; so that it follows that when particles of dust are of an extremely minute size, they would be held suspended almost in a state of perfect rest, provided that the air itself were free from agitation from any exciting cause. In many parts of the world vast collections of this atmospheric dust are frequently formed, from causes that have not hitherto been explained, and to such an extent that they assume the appearance of thick haze and banks of clouds, from which the terms *dust-haze* and *dust-storm* are frequently applied to them. In the island of Teneriffe these clouds of dust seem to be constantly present in the atmosphere, often affecting the transmission of light to a great extent, so as to obscure the rising and setting of the sun, and to render the observation of the stars by day quite impossible, besides gathering round the summit of the Peak of Teneriffe in horizontal strata, and almost concealing portions of it from view. This atmospheric haze, occasioned by particles of dust, has been noticed in South Africa, and on the Himalaya Mountains. It has been discovered by Professor Ehrenberg, of Berlin, that the particles carried about by the wind, when submitted to chemical tests, consist of minute fragments of all kinds of mineral substances, mixed with mould and various organic bodies.

(*Bot.*) The pollen of the anthers in flowers.
To raise a dust; to kick up a dust. To cause a pother about anything; to make a rumpus or commotion; — used colloquially; as, he *kicked up a dust* about it.

Dust, *v. a.* [*Ice.* *dusta*.] To free from dust; to brush, wipe, or scatter away dust from; as, to *dust* furniture. — To sprinkle, as with dust; as, to *dust* a cake with sugar. — To levigate; to triturate.

Dust-brush, *n.* A brush used for removing dust from the surface of anything.

Dust-tee, or **Doos-tee**, a river of Beloochistan, which rises in the prov. of Mechnan, and falls into the Arabian Gulf, in Lat. 25° 3' N., Lon. 61° 50' E., after a course of abt. 1,000 m.

Duster, *n.* One who, or that which, removes dust; specifically, a piece of cloth or rag, used to sweep dust from furniture, &c.; also, an utensil, resembling a sieve or dredger, used in kitchens. — A light overcoat, of dust color, worn by persons to protect their underclothing while travelling.

Dustiness, *n.* State of being dusty.

Dust-man, *n.*; *pl.* DUSTMEN. A person whose vocation is to remove away the dirt and garbage of cities.

Dust-touville, in *Wisconsin*, a village of Juneau co., abt. 3 m. E. of Manston.

Dust-pau, *n.* A domestic utensil for the carrying away of dust, &c., from the floor of a room.

Dust-point, *n.* A game played by boys.

Dusty, *a.* [*A. S.* *dystig*.] Filled with dust; clouded, covered, or sprinkled with dust; as, *dusty* as a miller. — Resembling dust; partaking of, or presenting the color of dust; as, a *dusty* white.

Dutch, (*dutch*), *a.* [*Dn.* *duitsch*; *Ger.* *deutsch*.] (*Geog.*) Pertaining to Holland (properly, *Holländisch*), (or the Netherlands), or to its inhabitants (*Der Holländer*); as, the *Dutch* school of painting.

—*n.* The people born in Holland; Dutchmen.—The language of the people of the Netherlands, or Holland.

—*v. a.* To harden and clarify by steeping in hot oil, &c.; as, to *dutch* a goose quill.

Dutch Cheese, *n.* A small, round, hard cheese, resembling a cannon-ball, made in Holland, Germany, &c., from skin-milk.

Dutch Clinker, *n.* A kind of yellowish fire-brick made in Holland.

Dutch Creek, in *Iowa*, a post-village and township of Washington co., abt. 35 m. S.W. by S. of Iowa City.

Dutch Drops, *n. pl.* (*Med.*) A nostrum at one time in great demand in this country, and popularly considered a specific in cases of rheumatism, lumbago, and most affections of the kidneys, as well as being esteemed a capital styptic for cuts and wounds. *D.D.* are a rectified spirit, made by distilling purified spirits of turpentine from gnatcatcher, oil of amber, oil of cloves, and spirits of uitre.

Dutch-ess, in *New York*, au E.S.E. co., bordering on Connecticut; area, 853 sq. miles. *Rivers.* Hudson and Fishkill rivers; Wappinger's and other smaller creeks. *Surface*, uneven; *soil*, generally fertile. *Mtn.* Iron, lead, marble, slate and limestone. *Capital.* Poughkeepsie. *Pop.* (1890) 77,879.

Dutch Flat, in *California*, a post-village of Placer co., abt. 32 m. N.N.E. of Auburn.

Dutch Foil, *n.* A thin sheet of beaten copper and zinc, mixed in parts, and used in the lacquering of toys, &c. (Called also *Dutch leaf*, *Dutch gold*, *Dutch metal*.)

Dutch Gap Canal, in *Virginia*, cut by General Butler's army through a neck of land formed by the James River, abt. 15 m. below Richmond.

Dutch Gold, *n.* See DUTCH FOIL.

Dutch Island, in *Rhode Island*, in Narragansett Bay. It exhibits a fixed light on its S. end, Lat. 41° 29' N., Lon. 71° 24' W.

Dutch Liquid, *n.* (*Chem.*) When olefant gas is mixed over water with chlorine in equal proportions, oily drops of a heavy, sweetish, aromatic liquid condense and sink in the water. This product is called *Dutch liquid*, from the circumstance of its having been discovered in Holland, and its oily appearance gives the name to olefant gas. It is a very interesting substance to chemists, having been extensively employed by Faraday and Regnault in the elucidation of the theory of substitutes.

Dutchman, *n.*; *pl.* DUTCHMEN. (*Geog.*) A native or inhabitant of Holland, or the Netherlands.

Flying Dutchman. (*Naut.*) A phantom ship, formerly believed, by sailors, to cruise in stormy weather about the Cape of Good Hope. The legend goes, that one Vanderdecken, a Dutch captain, meeting with adverse winds when off that Cape, swore a bitter oath that he would double it if he beat to and fro till the day of judgment. This legend forms the subject of several novels and sea-tales.

Dutchman's Creek, in *N. Carolina*, enters the Catawba River from Lincoln co.—Another, enters the Yadkin River from Davie co.

Dutchman's Creek, in *S. Carolina*, enters the Wateree River from Fairfield dist.

Dutchman's Pipe, *n.* (*Bot.*) See ARISTOLOCHIA.

Dutch Metal, *n.* See DUTCH FOIL.

Dutch Neck, in *New Jersey*, a post-village of Mercer co., abt. 18 m. N.E. of Trenton.

Dutch Oven, *n.* An apparatus for cooking small articles of food before a fire, as cheese and the like. It is made of tin, with a shallow bottom dish, and has a screen at the back to reflect and confine the heat. — In the U. S., a pot used in baking between hot coals.

Dutch Pink, *n.* (*Painting*, &c.) A bright, yellow pigment used in distemper, and for paper-staining, &c. See PINK.

Dutch Rush, *n.* (*Bot.*) See Equisetum.

Dutch School, *n.* (*Painting*.) This school of art cannot be said to possess the perfections that are to be observed in the Flemish school; their subjects are derived from the tavern, the smith shop, and from vulgar amusements of the rudest peasants. The expressions are sufficiently marked; but it is the expression of passions which debase, instead of ennobling human nature. It must be acknowledged, at the same time, that the Dutch painters have succeeded in several branches of the art. If they have chosen low subjects of imitation, they have represented them with great exactness; and truth must always please. If they have not succeeded in more difficult parts of the chiaro-oscuro, they at least excel in the most striking, such as in light confined in a narrow space, night illuminated by the moon, or by torches, and the light of a smith's forge. The Dutch understand the gradations of colors. They have no rivals in landscape-painting, considered as the faithful representation of a particular scene; but they are far from equalling Titian, Poussin, Claude Lorraine, &c., who have carried to the greatest perfection the ideal landscape; and whose pictures, instead of being the topographical representation of certain places, are the combined result of everything beautiful in imagination or in nature. — The greatest of the Dutch masters, though not the most characteristic, is Rembrandt van Rhyu, for portraits and figures; F. Bol, G. Flinck, F. Hals, and Vanderhelst were also excellent portrait-painters; G. Donw, Terburg, Metz, Mieris, and Netscher were admirable at conversation pieces; Bruwer, Ostade, and Jan Steen are as distinguished for the low subjects they painted as for the ability displayed in their execution; Ruysdael, Hobbema, Cuy, A. Vanderneer, Berghem, and A. Both are among the greatest of landscape-painters; Ph. Wouvermans and Huchtenburg are unsurpassed as battle-painters; W. Vandevelde the younger, and Bakhuysen, excelled in marine pieces; and Willemkalf, A. Van Utrecht, Van Huisum, and De Heem are unrivalled as painters of still life and flowers.

Dutch Settlement, in *Louisiana*, a village of St. Mary's parish, on Bayou Teche, abt. 100 m. W.S.W. of New Orleans.

Dutch Tile, *n.* An ornamental, and variously colored glazed tile, originally used by the Dutch to decorate the jambs of their chimneys, fire-places, &c.

Dutious, *a.* [*From duty*.] Performing those duties which are justly required, or such as are prescribed by law, justice, or propriety; dutiful; obedient.

—*A dutious daughter, and a sister kind.*—Dryden.

—Obsequious; subservient; ready at any beck or call.

—*A serviceable villain, dutious to the vices of thy mistress.*—Shaks.

Dutiously, *adv.* In a dutious or obedient manner.

Dutiousness, *n.* Quality of testifying duty, respect, or obedience.

Dutiable, *a.* [*See DUTY*.] Liable to duty; subject to the imposition of customs-duty; as, *dutiable* goods.

Dutied, *a.* Having a duty imposed upon, as goods.

Dutiful, *a.* Disposed and accustomed to perform duty; performing the duties or obligations required by law, justice, or propriety; dutious; obedient; submissive to superiors; as, a *dutiful* child, a *dutiful* subject. — Ex-

pressing respect; reverential; testifying a sense of duty; required by duty; deferential; as, "*dutiful* reverence."—Sidney.

Dutifully, *adv.* In a dutiful or reverential manner.

Dutifulness, *n.* State of being dutiful; quality of showing due reverence, obedience, or submission to just authority; habitual performance of duty; respect.

—*"Dutifulness to parents was a most popular virtue among the Romans."*—Dryden.

Du'totsburg, in *Pennsylvania*, a village of Monroe co., on the Delaware River, abt. 4 m. E. of Stroudsburg.

Du'trochet, RENE JOACHIM HENRI, a French physiologist and physician, b. in Poitou, 1776; author of several valuable works, but chiefly known by his researches on the passage of fluids through animal and vegetable substance. D. 1847.

Dutecah, (*doot-te-a'*) a rajahship of Hindostan, in Bundelcund; area, 850 sq. m.; *pop.* 120,000.—*D.*, its cap., is in Lat. 25° 40' N., Lon. 78° 31' E.; *pop.* abt. 50,000.

Duty, *n.* [*See DUE*.] That which is due from, or which is owing to, another; that which is bound, by any natural, moral, or legal obligation, to pay, do, or perform, or to refrain from doing. — Exercise of submission; act of obedience; performance of submission; any business, service, or office, particularly in a naval or military sense; as, a soldier on *duty*, a ship detached from a squadron for special *duty*, daily *duties*, &c.—Act of reverence, respect, or regard.

(*Com.*) A tax, toll, or impost; any sum of money levied by a government upon the export, import, or consumption of commodities; as, customs-duty, excise-duty, stamp-duty, &c.

(*Mech.*) The amount of work performed by a steam-engine, or other machinery.

Duum'vir, *n.*; *pl.* DUUM'VIRI. [*Lat.*, from *duo*, two, and *vir*, a man.] (*Rom. Hist.*) One of a duality of Roman functionaries, engaged in various magisterial and municipal duties. The chief *D.* were the *D. sacrorum*, to whom were intrusted the care and interpretation of the Sibylline books.

Duum'viral, *a.* [*Lat.* *duumviralis*.] Relating, or pertaining, to the office of the duumviri.

Duum'virate, *n.* [*Lat.* *duumviralus*.] Rank, office, or status of the duumviri.

Du'val, in *Florida*, a N.E. co., bordering on the Atlantic; area, abt. 900 sq. m. *Rivers.* St. John's and Nassau. *Surface*, low and even; *soil*, fertile. *Cap.* Jacksonville. *Pop.* (1897) abt. 40,000.

Duval's Bluff, in *Arkansas*, a village of Prairie co., on the White river. It was taken by the Federals under Gen. Gorman, Jan 15-19, 1863.

Duvernay, JOSEPH GUICHARD, a French anatomist, b. in Feurs, 1648; was professor of anatomy at the Jardin du Roi, in 1679, and was the author of a *Traité de l'Organe de l'Œil*, often reprinted and translated into several languages. Died 1730.

Duxbury, in *Massachusetts*, a post-town and township of Plymouth co., on Massachusetts Bay, about 30 m. S.E. of Boston. *Pop.* (1897) abt. 2,200.

Duxbury, in *Vermont*, a township of Washington county, on the Onion river, about 15 miles W. of Montpelier.

Du'valve, *n.* (*Mach.*) See SLIDE-VALVE.

Dwaar'skill, in *New York*, a P. O. of Ulster co.

Dwale, *n.* [*O. Ger.* *dwallen*, to mope, to be stupid.] A soporific draught; a stupefying potion.

(*Bot.*) A popular name of *Atropa belladonna*, from its poisonous properties.

(*Her.*) A rable or black color.

Dwan'ish, in *Washington*, a post-village of King co., on the Dwanish river, about 25 m. S. of Seattle.

Dwaraka', a town and celebrated temple of Hindostan, prov. of Guzerat; Lat. 22° 21' N., Lon. 69° 15' E.

Dwarf, *n.* [*A. S.* *dwerch*; *D.* *dwerig*; *Ger.* *zwerg*; *Dan.* *dverg*, a dwarf.] Anything wanting or stunted in growth, or small and deformed; an animal or plant which is much below the ordinary size of the species or kind; — particularly, a human being who never grows beyond 3 feet in height.

(*Hist.*) The custom of employing *D.* to contribute to the amusement of the great is of high antiquity in the East, where the art of retarding human growth was successfully practised. This art passed into Greece B. C. 324, and thence to Rome about A. D. 50. Domitian exhibited gladiatorial contests between *D.* and beautiful women in 81, and the Roman ladies employed them as domestic servants. The passion for *D.* reached its height in Europe during the reigns of Francis I. and Henry II. of France (1515-1559). The last prince who kept them for his amusement was Stanislaus, duke of Lorraine, whose favorite *D.* died in 1764. In our time, the American dwarf, Charles S. Stratton, born in Bridgeport, Conn., in 1832, acquired a world-wide celebrity under the name of "General Tom Thumb." He was not 2 feet in height, and weighed less than 16 pounds when 5 years old. He was remarkable for his agility and bodily symmetry, and had some success as an actor in Paris and London. D. 1883. "Commodore Nutt" is another American contribution to this Lilliputian genus of humanity.

Dwarf, *v. a.* To prevent from growing to the full or natural size; to stunt; to lessen; to make or keep small; to hinder development.

Dwarfish, *a.* Like a dwarf; below the ordinary size or stature; very small; little; paltry; despicable; as, a *dwarfish* man, a *dwarfish* tree.

Dwarfishly, *adv.* Dwarf-like; after the manner or appearance of a dwarf.

Dwarfishness, *n.* State or quality of being dwarfish; smallness of stature; littleness of size, physically or mentally; as, *dwarfishness* of intellect.

TYPES OF ODD AND ANCIENT DWELLINGS.

1. Roman. 2. Cliff dwelling (aboriginal American). 3. Egyptian. 4. Assyrian American.) 5. Turkish hut. 6. Aztec. 7. Teutonic hut. 8. Sudanese. 9. Communal dwelling of Pueblo Indians. 10, 11. Hebrew house and hut. 12. Persian. 13. Hindu. 14. Peruvian. 15. Byzantine. 16. Laplander's hut. 17. Chinese. 18. North American Indian. 19. Greek.

Dwarf-wall, *n.* (*Arch.*) A low wall of less height than the story of a building.

Dwell, *v. n.* [*Imp.* and *pp.* DWELLED, usually DWELT.] [*Icel.* *dvel*, *dvelja*, to abide; Old A. S. *bidwellan*, to stay; Mid. High Ger. *twellan*, to tarry.] To abide in any country as a permanent resident; to live in a place; to have an habitation for some time or permanence; to inhabit; to reside; to sojourn; to stay; to be domiciled.

"There dwell all that's good, and all that's fair."—*Waller*.

To dwell on or upon, to be fixed in attention; to continue long; to hang on with fondness; to be absorbed with; to detain to tediousness; as, to dwell upon the merits of a thing in conversation.

—*v. a.* To inhabit.

"We, sometimes, who dwell this wild."—*Milton*.

Dweller, *n.* An inhabitant; a resident; an occupier of a place of abode.

Dwelling, *n.* Habitation; place of residence; domicile; abode.

Dwelling-house, *n.* A house occupied by persons as a domestic residence; contradistinguished from an official domicile, as an office, club-house, store, or any place devoted to the transaction of business.

Dwelling-place, *n.* Place of residence.

Dwelt, *imp.* of DWELL, *q. v.*

Dwight, TIMOTHY, an American divine, celebrated both as a pulpit orator and lucid expounder of the Scriptures, b. at Northampton, Mass., 1752. He studied at Yale College, and was licensed to preach in 1777. During the War of Independence, he was for some time a chaplain in the American army. In 1783 he was ordained as pastor of the Congregational church in Greenfield, Connecticut, where he also conducted an academy for twelve years with distinguished success. In 1787, the College of Princeton, New Jersey, conferred on him the degree of D.D.; and in 1795 he was elected President of Yale

Fig. 888. — T. DWIGHT.

College and Professor of Divinity. *D.*'s principal work, published since his death, as several of his other works, is his *Theology Explained and Defended* (5 vols., 1818.) *D.* was not a great or original thinker; but his mind was fertile in the production of respectable ideas, which, though sufficiently commonplace, were yet pleasing, both in themselves, and from the important nature of the subjects to which they referred. Among his other writings may be mentioned, *The Conquest of Canaan*, an *Epic Poem* (1785); *Travels in N. E. and New York* (1821), reckoned by Southerly the most important of his writings; and two vols. of *Sermons* (1828). *D.* 1817.

wight, in *Arkansas*, a village of Pope co., ou Illinois Bayou, about 9 m. S. W. of Dover.

wight, in *Illinois*, a post-township of Livingston co., about 37 m. S. S. W. of Joliet.

wight, in *Michigan*, a township of Huron county.

winna, or **DYNA**, (NORTHERN,) a river of Russia, formed on the south of the prov. of Vologda by the junction of the two streams Suchona and Juy. It flows N. for about 50 m., and receives the Vytychegda from the E. At this point the *D.* becomes navigable, and here it alters its direction, and proceeds N. W. toward the Gulf of Archangel, into which it flows, having been joined on the right by the Pinega, and on the left by the Waga, and having traversed a course of about 700 miles. The basin of the *D.* comprehends an area of 123,900 square miles. Its average width is from 500 to 600 feet. The waters of the *D.*, the largest river that falls into the White Sea, are abundantly supplied with fish. Vessels of more than 4 feet draught cannot enter the *D.*, on account of the shoals at its mouth. — For SOUTHERN DWINA, see DUNA.

windle, *v. n.* [Formed from A. S. *dwinan*, to pine.] To become less by degrees; to diminish; to shrink; to dwindle away gradually; to degenerate; as, *dwindled* to extinction.

Decaying powers; a shrinking; degeneracy.

wine, *v. n.* Meaning essentially the same as DWINDLE, *v.*

wt., a contraction for penny-weight.

ad'ic, *a.* [Gr. *diadikos*.] Pertaining to the number two; having reference to, or comprising two parts, qualities, or substances; as, *dyadic* arithmetic.

berry, in *Pennsylvania*, a post-township of Wayne

berry Creek, in *Pennsylvania*, enters the Lackawanna River from Wayne co.

ce, ALEXANDER, D. A., an English critic and commentator, b. 1798. After graduating at Oxford, he took holy orders, and, in 1827, settled in London, and thenceforward devoted himself to critical literature. In this dept.

his labors were great and valuable. *D.* edited editions, with notes and biographies, of the principal old English poets and dramatists, and his annotated edition of Shakspeare is a notable example of his erudition, taste, and research. *D.* 1869.

Dyce, WILLIAM, R. A., an English historical painter, b. 1806. His most important works are, the *Baptism of Ethelbert*, in the House of Lords, Westminster; *King Lem and the Fool*; *Meeting of Jacob and Rachel*, &c. *D.* ultimately became a convert to the pre-Raphaelite school, and his later compositions bear, accordingly, a diminished reputation. *D.* 1864.

Dyck. See VANDYCK.

Dyckesville, in *Wisconsin*, a P. O. of Kewaunee co.

Dye, (*di*), *v. a.* [A. S. *deagan*; Lat. *tingo*, for *tinguo*; Gr. *teugō*, to stain.] To stain; to tinge; to color; to give a new and permanent color; as, to dye cloth.

—*n.* Color; tinge; a coloring liquid or matter.

Dye-house, *n.* A place where the art of dyeing is carried on.

Dyeing, (*di'ing*), *n.* (*Arts and Manuf.*) The object of this beautiful art is to fix certain coloring-matters uniformly and permanently in the fibres of wool, silk, cotton, and other materials. Coloring-matters which effect this without the intervention of a third substance, or mordant, are called *substantive* colors, while those which require such aid are called *adjective*. The exact way in which dye-stuffs act upon fibrous materials has not yet been investigated as fully as it deserves; the generally received opinion is that the fibre has an affinity for the coloring-matter in the case of substantive dyes, and for the mordant, which in its turn has an affinity for the coloring-matters of adjective dyes. Another opinion is, that the fibres contain pores which absorb the dye, forming an insoluble lake in the case of the mordanted dyes. However this may be, it is certain that different materials take dyes in different proportions. Thus silk and wool take the aniline dyes in the most perfect manner, but cotton requires the intervention of a powerful mineral or animal mordant. The operations that take place in dyeing are, mordanting, ageing, dunging, dyeing, and clearing. The principal mordants used are alumina, extensively employed for woollens and silks in the form of alum and cream of tartar; and peroxide of iron, which is much used in the form of protacetate for logwood and madder. Peroxide of tin and several other metallic oxides are used for the same purpose; also albumen, caseine, and other animal substances in different forms. After the fabric has been mordanted, it is generally hung up in a room through which a current of steam and air is passing, by means of which the union between the fibre and the mordant is quickened very considerably. The cloth is then dunged, in order to remove the superfluous mordant not absorbed by the fibre. This was formerly effected by passing the fibre through a mixture of cow-dung and water; but this filthy operation has been superseded in a great measure by the introduction of what are termed *dung substitutes*. The principal dung substitutes in use at present are the arsenic, arseniate, and silicate of soda, phosphate of lime, and caustic soda. The action of these is chemical; whereas that of the cow-dung was supposed to be merely mechanical, by supplying the unabsorbed mordant with a fibrous material in a firm state of division. Dunging is one of the most important processes in dyeing, great care being taken to keep the dunging-liquor at a proper strength and temperature. The next process is the dyeing proper, which is effected by running the fabric through the solution of the dye-stuff, the color being modified, more or less, by the nature of the mordant used. It would be impossible in a short space to give an account of the different methods adopted of dyeing different colors; but a description of the means used to produce the more common colors will be interesting to the reader. *Blacks* are generally produced by logwood or galls, with an iron mordant. Common black silks are dyed with logwood and fustic, iron being used as a mordant. The best silks are dyed black on a blue ground. Woollen goods are first dyed blue with indigo, and afterwards with sumach, logwood, and green copperas or sulphate of copper. Cotton and linen goods are dyed black in a very similar manner. Chromate of potash is also sometimes used with logwood; practical dyers say that it possesses no great advantages over blue or green copperas. *Blues* are produced from indigo, either in the form of sulphate or in aqueous solution. Prussian blue, with a persalt of iron or tin as a mordant, gives a very splendid dark blue; and, of late, several blues of novel shades have been produced from aniline. *Reds* are obtained by using cochineal, safflower, lac-dye, madder, or logwood, with a tin mordant. Fine crimson purples are obtained from aniline, and are known under the popular name of magenta. The most important *yellow dyes* are quercitron, fustic, turmeric, annatto, and French or Persian berries. By combining these different colors, and by adapting the mordants, colors of every conceivable shade and hue are easily obtained. When the fabric has received the color intended, it is washed in a solution of soap to which a little alkali has been added, after which it is boiled in water with or without the addition of solution of tin or other brightening substance. It is then said to be fast, which means that it will not be washed out. The chemistry of dyeing has of late years attracted the attention of our greatest chemists, and has reached such perfection that a loose color is almost unknown. The most important discovery in the art of *D.* is that of the artificial coloring matters from aniline, which, for many purposes, has superseded most of the above-named coloring substances and simplified the dyeing processes, many of them having, besides their incomparable brilliancy and infinite variety of tints, the

advantage of being used without any previous chemical treatments. See CALICO PRINTING.

Dy'er, MARY, a Quakeress, and victim to the persecution which prevailed against her sect in the early days of Massachusetts. By a statute of the government, all Quakers were, under penalty of death, excluded the limits of the State. Mary Dyer was imprisoned, tried, and condemned to be executed; and though reprieved upon the scaffold against her own remonstrances, and forcibly conducted from the State, yet such was her religious enthusiasm, that she voluntarily returned, and was hanged on Boston Common, June 1, 1660.

Dy'er, *n.* One engaged in the business of dyeing cloths, &c. **Dy'er**, in *Indiana*, a post-village of Lake co., abt. 30 m. E. of Joliet, Ill.

Dy'er, in *Tennessee*, a W. co., bordering on the Mississippi river; area, 495 sq. m. *Rivers*. Obion and Forked Deer rivers. *Surface*, level; *soil*, fertile. *Cap.* Dyersburg. *Pop.* (1890) 19,878.

Dy'er Brook, in *Maine*, a post-office of Aroostook co. **Dy'er's Bay**, in *Maine*, an arm of the Atlantic ocean, extending into Hancock co.

Dyersburg, in *Tennessee*, a city, cap. of Dyer co., on Forked Deer river, 75 m. N. E. of Memphis. *Pop.* 2,100.

Dyersville, in *Iowa*, a post-town of Dubuque co., about 30 m. W. of Dubuque. *Pop.* (1897) about 1,500.

Dyer's Weed, *n.* (*Bot.*) See RESEDA.

Dye's Mill, in *Virginia*, a former post-office of Fairfax co.

Dye's Mills, in *Missouri*, a village of Grundy co.

Dye-stuffs, *n. pl.* Materials used in dyeing.

Dye-wood, *n.* Any wood from which dye or coloring-matter is extracted.

Dying, *a.* Mortal; destined to death; perishable.

"This same flower, that smiles to-day, to-morrow will be dying." *Herrick*.

—Containing or supporting one who is dying; as, a *dying-bed*.

—Pertaining to death.

"By foreign hands thy dying eyes were closed."—*Pope*.

Dying, *n.* Death; act or state of expiring; as, "the dying of the Lord Jesus."—2 *Cor. iv. 10*.

Dyingly, *adv.* In a dying manner.

Dyingness, *n.* Exhaustion, as of a person dying;—hence, lassitude; languor; state of being dissolved in pleasure; languishment.

Dyke, *n.* Same as DIKE, *q. v.*

Dyle, (*dile*), a river of Belgium, flows through the province of South Brabant and Antwerp, and joins the Nethe, 4 m. below Mechlin.

Dymel, a river of Westphalia, which falls into the Weser.

Dynam, *n.* [Gr. *dynamis*, power; Fr. *dynamie*, a word first proposed by C. Dupin as a substitute for the term *horse-power*, originally used by Watt.] The dynamical unit, or the effect equivalent to a weight of one pound raised to the height of one foot in a second.—See DYNAMICS.

Dynam'eter, *n.* [Fr. *dynamètre*, from Gr. *dynamis*, power, and *metron*, measure.] (*Optics*.) An instrument for measuring the magnifying-power of a telescope.

Dynamet'rical, *a.* [Fr. *dynametrique*.] Relating or belonging to a dynameter.

Dynam'ic, **Dynam'ical**, *a.* [Gr. *dynamikos*, from *dynamis*, power, strength, force, from *dynamai*, to be able; probably allied to Heb. *din*, to govern.] Pertaining to strength or power; belonging to dynamics.—Relating or referring to the motive powers of natural forces; as, *dynam'ic science*.

Dynamics, *n. sing.* (*Mech.*) That part of Mechanics in which motion is contemplated in connection with the forces of which this motion is the effect. Force may be defined as any cause which changes, or tends to change, a body's state of rest or motion. The case of force tending to move bodies from rest will be found under the subject of STATICS. The case of force actually producing motion, or changing motion, belongs to *D.* Some of the most distinguished philosophers have given much time and labor to the investigation of this branch of mathematics. Among these may be mentioned Newton, Huygens, Euler, D'Alembert, Poinot, and others. The doctrine of dynamics is divided into several distinct heads. First, the names and definitions of the various terms employed; such as force, velocity, accumulating velocity, moving velocity, motion, accumulating motion, &c. The second branch of *D.* treats of the movement of points, and is divided into two classes of problems—direct and inverse. In the first case the path of a point is determined when the forces acting upon it are given; and in the second case the force or forces acting upon a point are determined when the path of the point is given. In the third branch of *D.* the motion of a rigid system of points or a solid body is treated of. D'Alembert first laid down the general method for treating problems in rigid dynamics. Motions of rotation are treated of in the fourth branch of *D.* The three laws of motion upon which most of the problems in dynamics depend are as follows:—First, a body under the action of no external force will remain at rest, or move uniformly in a straight line. Second, when any number of forces act upon a body in motion, each produces its whole effect in altering the magnitude and direction of the body's velocity, as if it acted singly on the body at rest. Third, when pressure produces motion in a body, the momentum generated in a unit of time, supposing the pressure constant, or which would be generated supposing the pressure variable, is proportional to the pressure.—See CENTRAL FORCES, FORCE, PERCUSSION, PROJECTION.

Dynamom'eter, *n.* [Gr. *dynamis*, power, and *metron*, a measure.] The name given to all instruments that are constructed for the purpose of measuring the power

that can be exerted by the human frame, animals or machinery, whether by a single effort of strength or by a continuous series of efforts exercised during any given time. In estimating the amount of work performed by any motive power by means of a machine contrived for the purpose, we have to consider the force that has been applied and the space through which this force has been exerted. If a horse pull a hundred-weight along a mile of level ground in half an hour, or half a hundred-weight over two miles in the same time, he will have performed the same amount of work in both cases; but if he continue to perform the same task for an hour in either case, it is manifest that he will have done double the quantity. We see, then, that the amount of work done must be estimated by the force applied to accomplish it, and the space of time for which the application of the force is kept up; in other words, it will be measured by the force exerted multiplied by the space of time through which it continues to act. To ascertain this with accuracy, a *D.* is required. The simplest kinds of these instruments are those used to determine the force which any man or animal can exert by a single effort. They vary considerably in form, as the force happens to be applied to the machine by tension or pressure, or by striking it with the clenched fist to determine the weight of the blow that a person can deliver. The amount of power exerted is indicated by a needle moving along a horizontal or circular scale. Fig. 889 shows a *D.* constructed for trying the tenacity of a rod. It consists of a heavy iron frame, at one end of which is a box containing a stout steel spring. A pointer connected with this spring moves over a graduated arc on

Fig. 889. — DYNAMOMETER.

the top of the box. On the frame are two movable blocks, or slides, one of which is attached to the spring, while the other may be carried backward and forward by a screw and crank. The rod whose tenacity is to be tried is stretched between the two slides, and the crank is then slowly turned so as to pull upon the rod until it breaks. The force upon the rod bends the spring; the pointer shows how much force it took to break the rod. (Mus.) The doctrine of the degrees of force in tone.

Dynamism, n. The doctrine advanced by Leibnitz, that force is involved in all substances or bodies.

Dynamomet'ric, Dynamomet'rical, a. Relating or pertaining to a dynamometer.

Dynast'ic, a. Relating or belonging to a dynasty; as, a *dynastic* line of monarchs.

Dynasty, n. [Fr. *dynastie*; Gr. *dynasteia*, from *dynastes*, a lord or chief, from *dynamai*, to be able, strong, or powerful.] Power; rule;—hence, government; sovereignty; a race or succession of kings or rulers of the same line or family, who govern a particular country; as, the Guelph *dynasty*.

"Greece was divided into several *dynasties*." — Pope.

Dys, an inseparable prefix, from the Greek, signifying bad, ill, hard, difficult, unpropitious, and the like.

Dys'elaste, Dys'daëite, n. (Min.) Same as Okenite, *q. v.*

Dys'erasy, n. [Gr. *dyskrasia*.] (Med.) A morbid state of the constitution.

Dys'eraste, n. (Min.) An orthorhombic mineral of a metallic lustre; color and streak silver-white. *Comp.* antimony 22, silver 78 = 100. *Sp. gr.* 9.44-9.82.

Dysenter'ic, Dysenter'ical, a. Pertaining to dysentery; accompanied with, or proceeding from, dysentery; as, *dysenteric* symptoms.—Suffering from dysentery; as, a *dysenteric* patient.

Dys'entery, n. [Fr. *dysenterie*, from Lat. and Gr. *dysenteria*—Gr. *dys*, bad, and *enteron*, intestines, from *entos*, inside.] (Med.) A disease characterized by frequent mucous or bloody stools, attended with griping pains in the abdomen, straining, and tenesmus. It differs from diarrhœa in that, while in the latter the stools are fecal, in this there is a retention of the natural feces, or they are expelled from time to time in small, hard, separate lumps, termed *scybalæ*. *D.* consists essentially in inflammation of the mucous membrane of the large intestines, and, in the acute form or stage of the disease, is attended with fever. *D.* is one of the pests of hot climates, and in all tropical countries, at certain seasons of the year, it is very prevalent and destructive. It is, however, among fleets and armies that this malady most displays its deadly power; so that it has been termed the *Scourge of armies and the most fatal of all their diseases*. The forms of this disease, and the circumstances under which it prevails, are infinitely various, and many speculations have been formed regarding it. It is now a primary, now a consecutive, and now a symptomatic disease. It has been ascribed to exposure, to wet, and to cold; to the use of unwholesome food, to the agency of malarial, and to contagion. Generally the most violent forms of this disease occur in warm climates, and in situations where the body is exposed to extreme alternations of heat and cold; and hence there is every reason to believe that these influences are largely concerned in its production. It is doubtful, however, whether the use of unwholesome food or malarious poison would induce it

as a primary disease; and the general opinion among medical men is that it is not contagious. Generally one of the earliest symptoms of *D.* is an uneasiness of the abdomen, soon amounting to pain of a gripping character, particularly in the umbilical region, attended with an inclination to go to stool, and temporarily relieved by evacuation. As the disease becomes developed, the relief is but transient; the desire to go to stool is more frequent and importunate; the discharge is scanty, and what is voided is either altogether a jelly-like mucus, or, more commonly, it is mucous and bloody—the *bloody-flux* of old authors—mixed with films and membranous shreds and fragments resembling flesh. The scanty evacuations now produce distress rather than ease, and the patient is tormented by a sensation that there is still something to come away, the expulsion of which would cure him, and is irresistibly impelled to strain violently to get rid of the irritation. In an advanced state the stools become greenish or black, and very fetid; the bladder frequently sympathizes with the rectum, and nausea and vomiting sometimes ensue. The patient passes sleepless or dreamy and disturbed nights, and is low-spirited and desponding. In fatal cases the pulse becomes very small and rapid, the features sharpen, the surface grows cold, and death at length sets in. The duration of this disease is very various. In some cases it may prove fatal in a few days, or even hours; in others it may last for weeks or months. Two stages of this disease are recognized—the inflammatory, and that of ulceration. In the inflammatory form, when the fever is high, and the pain intense, blood-letting from the arm is generally recommended, and also the local abstraction of the blood by leeches or cupping. Dover's powder is also given as a sudorific, and profuse sweating encouraged. Purgatives are to be employed with great caution. If the colon be distended with feculent matter which it cannot discharge, then the mildest purgatives, such as castor-oil, should be administered, and cautiously repeated until the whole of the irritating matter is removed. If, on the contrary, there is no accumulation of feculent matter, the use of purgatives is to be avoided. After the inflammatory state has been reduced by blood-letting, and the accumulated feces ejected by purgatives, the great object is to soothe the irritated membrane by opiates, and to strengthen the system by gentle tonics and a light, nourishing diet. If the disease is not cut short by this method, but has reached the second stage, and become chronic, the most effectual remedies appear to be laxatives and opiates given alternately, and combined with such medicines as promote perspiration. The abdomen should be swathed in flannel, and much benefit may be obtained from the employment of clysters, if there is not too much tenesmus to admit of the introduction of the pipe. The food should be farinaceous and simple, and great care must be taken during convalescence to prevent a return to improper diet, and any fresh exposure to cold.

Dysodia, n. (Bot.) A genus of plants, ord. *Asteraceæ*. They are annual plants, with leaves mostly opposite and pinnately parted or toothed; heads paniculate or corymbose; flowers yellow.

Dys'odile, n. [Gr. *dysodes*, fetid.] A combustible mineral, found in secondary limestone, of a yellowish color, either compact or in foliated masses which are composed of paper-like and flexible laminae, with impressions of fishes and plants. It burns with a crackling noise, giving off much flame, and a very fetid smell.

Dyson's, in Ohio, a post-office of Guernsey co.

Dysop'sy, n. [Fr. *dysopsie*.] Dimness of the eyesight.

Dysorexy, n. [Fr. *dysorexie*] (Med.) Diminution of appetite.

Dyspeps'ia, Dyspep'sy, n. [Fr. *dyspepsie*, from Gr. *dyspepsia*—*dys*, and *pepsô*, later *pepsô*, to digest.] (Med.) Bad digestion; indigestion, or difficulty of digestion. It is by means of digestion that the food which is taken into the stomach is converted into nutritive matter for supplying the waste that is constantly going on in the system; hence anything that interferes with the due supply of nutritive matter, materially affects the system, and may introduce a long series of ills. The complicated series of operations by which digestion is carried on renders indigestion one of the most prevalent of the ills to which human flesh is subject—it is the prevailing malady of civilized city life. It is in the stomach, as is well known, that the principal change is effected in the food. Whenever food is taken into the stomach, there is in the natural state a secretion of gastric juice, which acts chemically upon it, and by which it is dissolved or converted into chyme. While this process is going on, it is facilitated by a sort of churning or revolving movement of the stomach, and at length it passes by degrees through the pyloric extremity of the stomach into the intestines. *D.*, therefore, may be occasioned by a deficient supply of gastric juice, so that the food is not properly dissolved, or from a too torpid or too irritable condition of the muscular fibres of the stomach, in consequence of which the chyme is detained too long, or ejected too soon. A weak dyspeptic stomach acts very slowly, or not at all, on many kinds of food. They undergo spontaneous changes, promoted by the mere warmth and moisture of the stomach; gases are extricated, acids are formed, and, perhaps, the half-digested mass is at length expelled by vomiting, or it passes, undissolved, into the duodenum, and becomes a source of irritation and disturbance during the whole of its passage through the intestines. One of the most frequent signs of indigestion is a loss of appetite, no desire for food, or, perhaps, even an absolute repugnance and disgust at the very thought of eating. Sometimes the appetite is capricious and uncertain, or may even be morbidly craving and ravenous.

Sometimes nausea comes on immediately after the food is swallowed; and sometimes without any nausea, but after the lapse of some time the food is ejected by vomiting. There is, also, usually an obscure feeling of uneasiness, fulness, distention, and weight in the region of the stomach, occasionally amounting to pain, or even severe pain, with flatulence and eructation. Some persons suffer pain when the stomach is empty, others immediately after taking food, or the pain may not begin for two or three hours after a meal, and then continue for some hours. Sometimes the pain comes on at uncertain intervals in the most violent paroxysms, accompanied by a sensation of distention, much anxiety, and extreme restlessness. Costiveness is a very frequent concomitant of *D.*, but sometimes it is attended with diarrhœa. Among the innumerable disorders in more distant parts that are produced by *D.* are palpitations of the heart, irregularities of the pulse, asthma, pain in the head, with the loss of mental energy, and some confusion of thought. One of the worst of the occasional concomitants of *D.* is that state of mind which is known as *hypochondriasis*. There is languor, listlessness, or want of resolution, with an apprehension of some great evil in the future. Such persons are particularly attentive to the state of their own health, and, from any unusual feeling, perhaps of the slightest kind, they apprehend great danger, or even death itself. Among the causes that induce *D.* are indigestion, noxious or irritating substances taken into the stomach as food and drink—such as tainted meat, decayed vegetables, unripe fruits, very acid matters, alcoholic liquors, &c.; and even wholesome food taken too frequently, or in too large a quantity, especially when its nature is very nutritious, or in a very concentrated form, or rendered too stimulating by being highly seasoned. The abuse of fermented and spirituous liquors is one of the most frequent causes of *D.*; and the consumption of large quantities of fluids, particularly during meals, is very injurious. Among the more remote causes of *D.*, or those which affect the stomach through other organs, are want of exercise or of pure air, intense study, or too close application to business, strong mental emotion, or exposure to a cold or moist atmosphere. In the treatment of *D.* it is to be borne in mind that it is not so much medicines that will remove the present discomfort that are required, as a discontinuance of those habits which have generated the discomfort. Hence one great and indispensable principle in the treatment of *D.* is that of restricting the quantity of food taken at any one time. The amount of food introduced into the stomach should be kept within the limits of its capacities and powers. Another very important principle is, that the stomach should have time to perform one task before another is imposed upon it. From three to five hours ought to be allowed for the digestion of a meal, and one hour more for the stomach to rest in. As different articles of food are soluble in the stomach with various degrees of readiness, it is of importance to select those articles that are soluble with least difficulty, as well as to avoid mixing together in the stomach various substances which are of different degrees of solubility, hence it is salutary to dine off one dish. Animal food is much easier of digestion in the human stomach than vegetable, and a much less quantity of it is needed for nutriment, while it is not so likely to generate acidity. This, with a moderate portion of thoroughly-cooked vegetables, is, perhaps, the diet best suited for a feeble stomach. As regards the use of spirituous or fermented liquors, most dyspeptic persons would be better without any of these drinks. Finally, change of air, change of scene, change of society, usually exert a very beneficial effect in this disorder.

Dyspep'tic, Dyspep'tical, a. [Gr. *dys*, and *pep'tikos*, conducive to digestion.] Afflicted with bad digestion; pertaining to, or consisting in, dyspepsia; as, a *dyspeptic* habit of body.

Dyspep'tic, n. One who suffers from bad or imperfect digestion.

Dysphag'ia, Dis'phagy, n. [Gr. *dys*, bad, and *phagin*, to eat.] (Med.) Difficulty of swallowing.—Paralysis, stricture of the œsophagus, enlarged tonsils, relaxed uvula, a debilitated state of the muscular coat of the pharynx and œsophagus, spasm of the organs concerned in deglutition, and inflammation, are among some of the leading causes which occasion difficulty of swallowing; it is also an attendant upon hysteria, hypochondriasis, tetanus, trismus, and hydrophobia. The treatment will depend upon the prevailing cause.

Dyspno'a, n. (Path.) See SECTION II.

Dyspno'ic, a. (Path.) Having a difficulty of breathing; relating to dyspnoea.

Dysthe'sia, n. (Path.) A morbid bodily condition. **Dysthet'ic, a.** [Gr. *dysthetos*.] (Med.) Pertaining to morbid action of the blood-vessels with regard to the circulation of blood.

Dysthym'ic, a. [Gr. *dysthymikos*, morbidness.] (Med.) Dejection of the mind or spirits; morbid despondency.

Dys'tome, Dystom'ic, Dys'tomons, a. (Mon.) Difficulty of cleavage.

Dysu'rie, a. Relating to, or suffering from dysuria.

Dysu'ria, Dys'ury, n. [Gr. *dys*, and *oyros*, urine.] (Med.) Difficulty in voiding the urine. A common symptom in cases of gravel, inflammation of the urinary organs, spasm, and stricture. The nature of the relief must depend upon the exciting cause.

Dze'ron, DZEREN, n. (Zool.) A species of antelope which inhabits China, Tibet, and Tartary.

Dzoon'garia, SOONGARIA, a. A mountainous country of Central Asia, forming part of the Chinese Empire, lat. between 42° and 50° N., and lon. between 75° and 90° E. It is inhabited by nomad tribes.

D.—SECTION II.

DAHL

DAIR

Dabney, ROBERT LEWIS, D.D., LL.D., Presbyterian divine, born in Louisa co., Va., March 5, 1820. He studied at Hampden Sidney College, the University of Virginia, and Union Theological Seminary in the same State, graduated in 1846, and subsequently became professor in the Theological Seminary. In 1883 he was appointed professor of Philosophy in the State University of Austin, Tex. During the Civil War he served as major in the Confederate army, and in 1862 was made chief of staff of the Second corps. He was moderator of the Presbyterian General Assembly (South) in 1870, and is the author of *Life of General Thomas J. Jackson*; *Defense of Virginia and the South*; *Sacred Rhetoric*, &c.

Dacotah. See DAKOTA.

Dacres, SIR SIDNEY C., admiral, was born at Totness, Devonshire, Eng., Jan. 9, 1804; entered the British navy in 1817 with the rank of captain, and received rapid promotion, becoming admiral in 1870. He was senior Lord of the Admiralty from 1868 to 1872, and later Governor of Greenwich Hospital. Numerous foreign orders have honored him with medals, and he was created a K.C.B. Died in March, 1884.

Dacrydium, n. [Gr. *dakryō*, a tear.] (Bot.) A genus of plants, order *Taxaceæ*, or Yew family. It includes several valuable timber-trees; as, the bun pine of Australia, *D. Franklini*; the Kakateroo of New Zealand, *D. tarifolium*; and the imon pine, *D. cupressinum*.

Dacryglosis, n. [Gr. *dakryō*, a tear, and *gelao*, to laugh.] (Path.) A species of insanity in which the patient weeps and laughs at the same time.

Dacryoma, n. [Gr. *dakryō*, to weep.] (Path.) A closing of one or more of the *puncta lacrymalia*, or tear ducts, causing an effusion of tears.

Dactylology, n. [Gr. *daktylos*, a finger, and *logos*, discourse.] The art of spelling words, or discoursing, by placing the fingers in such positions as to signify the letters of the alphabet. See DEAF AND DUMB.

Dactylopterus, n. [Gr. *daktylos*, and *pteron*, a wing or fin.] (Ichth.) A genus of acanthopterygious fishes, the characteristics of which are: a large and long flat head, rising suddenly from the snout; the preoperculum furnished with an elongated strong spine; the jaws armed with masses of minute conical teeth; six branchiostegous rays; the sub-pectoral rays numerous, very long, and connected by a membrane; body covered with hard, carinated scales. By means of their large fins, these fishes dart out of the water when pursued, and are able to sustain themselves in the air for several seconds. The sea-swallow, or flying gurnard, *D. volitans*, of the Atlantic coast of America, is 6 to 14 inches long.

Dadeville, n. in Alabama, a town, cap. of Tallapoosa co., 45 m. N.E. of Montgomery. Pop. (1887) 1,050.

Dadeville, n. in Missouri, a post-village of Dade co., about 34 m. W.N.W. of Springfield.

Dagnan-Bouvet, PASCAL ADOLPHE JEAN, genre painter, was born in Paris, 1852; studied with Gérôme, one of the greatest artists of the modern French school. His first notable canvas was *The Accident*; another greatly admired is *Horses at the Watering Trough*; and the work considered by many as his best is *The Parental Blessing*, which was purchased by the Russian government. He has been awarded the Prix de Rome; a third-class medal at the Salon of 1878, and one of the first-class at that of 1880. Received a medal of honor at the Paris Exposition of 1889, and was made an officer of the Legion of Honor in 1892.

Da'go, n. [A corruption of *Diego*, or *Santiago*.] Originally, in sailors' parlance, a person speaking Spanish or Portuguese. More recently (slang), any dark-skinned foreigner, especially an Italian.

Dahlgren, FREDERICK AUGUST, Swedish poet and critic, born at Wernland, August 20, 1816; a popular song-writer, dramatist, and translator.

Dahlgren, ULRIC, son of Admiral John A., born in Bucks co., Pa., in 1842, removed to Washington with his father in 1848, and there became familiar with the use of artillery by frequent visits to the navy yard. In 1858 he began the study of civil engineering, and of law at Philadelphia in 1860, but returned to Washington on the outbreak of the Civil War and was placed in charge of a naval battery on Maryland Heights. Afterward he became aid to General Sigel and served as his chief of artillery at the second battle of Bull Run. In November, 1862, he made an attack on Fredericksburg at the head of Sigel's body-guard of 57 men, took and held the town for several hours, and then withdrew with 31 prisoners. He performed important services at Chancellorsville and Gettysburg, but was soon after wounded and

lost a foot through amputation. Recovering, he was made colonel, and in March (1864), in concert with General Kilpatrick, made a raid upon Richmond with the purpose of releasing the prisoners in Libby and Belle Isle prisons. The attempt failed and *D.* was slain.

Dahn, JULIUS SMITH FELIX, historian, jurist, novelist, and poet; born Feb. 9, 1834. Completed his course at the University of Berlin in 1853, being subsequently a teacher, and a professor, at Würzburg, resigning the latter position in 1870. After the Franco-German war, became professor of German Law at the University of Königsberg. His works include *Das Kriegesrecht*, a popular treatise on the law of war; *Ein Kampf um Rom*; *Die Könige der Germanen*; *Westgotische Studien*, &c.

Dairy Husbandry. Among the animals kept by man, none is of more value than the milk cow, the breeding and care of which, the production of milk, and the obtaining from this of butter, cheese, and other products, constituting a very important branch of agriculture. At former periods the milk of asses, goats, and sheep was extensively used, but now the cow is almost solely kept as a milk-giver, and her powers in this direction have been strikingly developed. For a long time, both in Europe and the U. S., *D. H.* continued the duty of the women of the farm; there was no conjoined effort, and the value of the products depended so largely upon the skill of the dairy women as to cause wide differences in the value of the products. At the same time certain localities, by the use of special methods, yielded peculiar results. To such differences are due the many characteristic kinds of cheese produced in different localities of Switzerland and France. It was by the introduction of the factory system in America that *D. H.* became a distinct branch of agriculture, yielding a uniform and superior quality of product. The first cheese factory was established in Oneida county, N. Y., in 1860, since which date there has been an important progress in dairy methods, one of the most valuable of these being the invention of the centrifugal machine for the rapid separation of the cream from the milk; and a second, the discovery of a cheap, rapid, and accurate method of determining the percentage of fat in milk. The latter is very important in relation to the selection and improvement of dairy cows.—*Selection of stock.* Up to a quarter of a century ago the common cows of the country were used almost exclusively for dairy purposes, and our dairy product is still founded upon the powers of this animal, which, when properly selected and well fed and cared for, will yield from 500 to 600 lbs. of cheese, or 175 to 200 lbs. of butter per annum; the milking period extending from about the 1st of March to some time in December. For years past, however, much attention has been paid by dairymen to the introduction of foreign stock of notable milk-yielding powers. At one time the short-horn breed was a favorite. Then came the Ayrshire. Afterward the Dutch, or Holland, and the Jersey, or Guernsey, cattle came into favor, the former for cheese-dairying, the latter for butter-yielding powers. The common cows of the U. S. have been widely crossed with those breeds, with the result of producing milkers of abundant yield, though not equal in butter-making powers to the pure-blooded foreign breeds.—*Cheese production.* The bulk of the cheese produced in the U. S. closely resembles the Cheddar of England, whose characteristic properties are: mildness in flavor, a clear, sweet, nutty taste, solid texture, or freedom from holes, mellowness and richness of substance, dissolving easily in the mouth, and good keeping qualities. The cheese is white or colored, as it is made from untreated milk or milk colored with annatto. A good Cheddar cheese six months old should yield, on analysis, 33.92 parts of water, 33.15 of butter, 28.12 of caseine, .96 of milk sugar, lactic acid, and extractive matters, and 3.85 of mineral matter. A very essential point in the making of good cheese is a proper method of curing, much injury being done by ripening cheeses in damp and badly-ventilated rooms, and rooms in which the temperature is not uniform. Experienced dairymen seek to keep the temperature between 70° and 75° F., which they maintain throughout the curing process, and also avoid too great dryness of atmosphere, like that coming from stove heat, as likely to produce an injurious loss of moisture in the cheese. The use of hot-water pipes, arranged along the wall, is considered the best method of heating in cold weather, though other methods, the results of experience, are in use. In addition to Cheddar, other kinds of cheese are produced in the U. S.,

such as Gruyere and Limburger, sufficient to meet a limited demand, the manufacture being mainly confined to those who learned the art in Europe. Some other kinds are made in small quantities, including some of the soft French cheeses, such as Neufchatel, which has been attempted with the best results.—

Imitation cheese. A cheese made from skimmed milk, which has been given body by the introduction of a cheaper fat than butter, is one of the products of the American dairy, and is not without merit, though of course not equal to the best grades of whole-milk cheese. Its recommendation is its greater cheapness. In this variety an artificial cream, made from oil and skimmed milk, is employed, by the use of an ingenious machine which yields an emulsion similar to that of the butter globules in the original milk.—*Butter making.* There is no ranch of farming that has made more rapid progress in recent years than butter dairying. The improvement began with the establishment of creameries, in which the standard of butter was raised to the highest grade and the greatest uniformity in color, texture, and quality. This has greatly promoted home consumption, the finest butters bringing prices at home which prohibit exportation. Of the more than 1,000,000,000 lbs. of butter produced annually in the U. S., only about 4 per cent. is exported, the remainder being consumed at home. Various methods of obtaining the cream from the milk have been adopted, the first being the pool and pail system—the milk pails being set in pools of flowing spring water. Then came the large shallow pan system, each pan large enough to hold the milk from a herd at one milking, while cold spring water was kept constantly flowing around and under the pans. There followed the deep-setting system, borrowed from Sweden, but improved by American ingenuity, the cans being 9 inches in diameter and 20 inches deep, and set in tanks of ice-cold water. In these the cream separates in from 12 to 20 hours. The most recent and striking method of obtaining the cream from milk is by use of the "Centrifugal Creamer," which obtains the cream from the milk with great rapidity by subjecting it to rapid centrifugal motion. The effort of centrifugal force is to throw the heavier portion (the skimmed milk) to the surface, while the lighter portion (the cream) remains in the center. There are arrangements for drawing each off as fast as they are separated. In churning, the most popular churns are those without any dasher, the churn being a cubical box turning on an axis passing through it diagonally, or a barrel or oblong box, similarly revolved. The action consists in a dashing of the cream violently against the sides of the churn, which concussion causes the globules of fat to adhere together and gradually coalesce into small grains of butter. When these are as large as wheat grains, or peas, at the largest, the buttermilk is drawn off, and the butter washed with cold water or weak brine.—The dairy interest is of vast proportions in the U. S. and Canada, not less than 1,000,000,000 acres of land, with more than 10,000,000 cows being devoted to this industry in its various branches of milk-serving, butter and cheese making, &c. The cows most commonly preferred are the Dutch stock known as Holstein, the shorthorns and Ayrshires, and half breeds of these with native cows. For butter dairying the various grades of the Jersey breed are the most profitable, and these have been largely introduced. Ayrshires and Devons follow next in favor. In America dairying is now the work of men, not of women as it is so largely in Europe. It consists in pasturing, feeding and milking the cows, and otherwise caring for them. On many dairy farms winter butter is made, feeding-crops being raised in the summer for winter use. The use of ensilage has been found convenient and profitable in the dairy, and this is rapidly extending. The cheapness and ease of production of this excellent fodder has stimulated the dairy interest in America more than any other circumstance.—*Condensed milk.* The manufacture of this important product has greatly extended in the U. S. Its production in marketable shape began about 1857, and by 1861 a number of factories were in operation, a large demand arising from its use in the Northern armies. In the production of this, as now performed, only the water is removed from the milk and nothing but sugar is added. The product is of the consistency of honey, and needs only dilution with water to be reconverted into milk. What is known as *dry preserved milk* needs to be dissolved in hot water, while cold water will serve

for condensed milk. In the production of this article the water is evaporated by heat, dissolved sugar being added where a sweetened product is desired, though unsugared or "plain condensed milk" is largely manufactured. In this the condensation is from 4 to 1; that is, 75 per cent. of water is driven off by evaporation. The annual product of condensed milk in the U. S. is probably more than 20,000,000 lbs., of which a considerable portion is exported.—Nothing need be said here of artificial butter, now so largely produced in the U. S. and in some countries of Europe. This subject will be treated under the heading of OLEOMARGARINE. "Dairy Boards of Trade" have been established—the first in 1870—whose purpose it is to aid in the marketing of the dairy products of the country, which have grown so large as to render some such organized system of operation necessary. These now exist in a number of the States and in Canada, each leading center of dairy production having its sale-days and boards of trade, whose goods can be marketed from week to week as they become ready for sale.

Dai'sy, *n.* (*Bot.*) The common name for *Bellis*.—*D.*, *AFRICAN*. *Athanasia annua*.—*D.*, *AUSTRALIAN*. *Vittadenia triloba*.—*D.*, *BLUE*. *Globularia vulgaris*.—*D.*, *CHRISTMAS*. A popular name for some of the species of *Aster*.—*D.*, *MICHAELMAS*. A popular garden name for *Aster*, especially for *A. tradescanti*.—*D.*, *OXEYE*. *Chrysanthemum leucanthemum*.—*D.*, *SWAN-RIVER*. *Brachycome iberidifolia*.

Dai'sy, *n.* A slang term applied to any person or thing that is particularly attractive, neat, or complete.

Dai'sy-cutter, *n.* In baseball and cricket, a ball batted swiftly on a line not much above the ground level.—A low-stepping trotting horse.

Dakh'ma, *n.* [*Native East Indian*.] A place where human bones are deposited, especially the towers on which bodies are placed, in some parts of India, to be devoured by vultures.

Dako'ta Formation, (*Geol.*) A group of rocks belonging to the cretaceous strata of America, so called from being first observed in the territory of the Dakota Indians. Its outcrop extends along the western border of the great plains from Texas to Alberta, and is also observed at many points in the eastern border of the plains, while the intermediate portions are overlaid by cretaceous beds of more recent origin. The rocks consist of coarse, yellowish sandstones, with associated shales. The water in which these beds were laid is shown, by fossil shells, to have been partly fresh and partly brackish, while the abundant remains of plants show that it was surrounded by a luxuriant forest. The formation is of industrial importance from its containing a valuable supply of coal, and from the free yielding of artesian water by its sandstones.

Dako'tan, *n.* A citizen or resident of the Dakotas.—One of the tribe of Dakota Indians.

—*a.* Of or pertaining to either North or South Dakota, the residents thereof, or the Indian tribe bearing that name.

Dalias (*dä'le-äs*), a mining town of Spain, province Almeria, 9 m. from the Mediterranean, and 18 W. S. W. of Almeria. *Pop.* (1895) 9,439.

Dall, WILLIAM HEALEY, naturalist, was born in Boston, Aug. 21, 1845; became a special pupil of Prof. Louis Agassiz, and studied also with Jeffries Wyman and Gould; had charge of the Western Union Telegraph Co.'s survey for an international line via Bering Strait and Siberia; has made several explorations of Alaska in the service of the U. S. Geological Survey, having been made paleontologist of that bureau in 1884. His works include: *Alaska and its Resources*; *Meteorology of Alaska*, &c., besides numerous valuable papers on the Mollusca, Brachiopoda, and the ethnology and general history of Alaska.

Dal'linger, WILLIAM HENRY, LL.D., F.R.S., F.L.S., scientist, born at Devonport, Eng., in 1841; educated privately, and entered the ministry in 1861. He was pastor of a church in Liverpool for twelve years, and then accepted the appointment of governor of Wesley College, in Sheffield. He afterward took up the study of biology, and became lecturer in several institutions, including the Royal Institution of London and University of Cambridge. Was also president of the Royal Microscopical Society in 1883. His works include: *Minute Forms of Life*; *The Origin of Life*, &c.

Dal'ton, JOHN CALL, M.D., LL.D., an eminent American physiologist, born at Chelmsford, Mass., 1825, graduated at Harvard College in 1844. In 1859 appeared his *Treatise on Human Physiology*, which ran through several editions. He wrote other physiological and anatomical works, and gained a wide reputation by his investigations in embryology and physiology. He became professor of Physiology and Hygiene in the New York College of Physicians and Surgeons. Died Feb. 12, 1889.

Dal'ly, CHARLES PATRICK, LL.D., jurist, born in New York, Oct. 31, 1816; studied law, and was admitted to the bar in 1839. He rose to the position of Chief Justice of the Court of Common Pleas, New York city, in 1857; and since its foundation has been president of the American Geographical and Statistical Society. Besides a *History of the Courts of New York*, he is the author of a number of papers on banking, law, science, &c.

Daly, JOHN AUGUSTUS, playwright and theatrical manager, was born at Plymouth, N. C., in July, 1838; received a common-school education and entered journalism at the age of 20, drifting into dramatic criticism; has been successful as a theatrical manager, his troupes having played throughout this country, Great Britain, France and Germany, as well as at New York and London theaters controlled by him. His first notable dramatic ventures were: *Under the Gaslight*, and *Leah, the Forsaken*.

Dama'raland, a country of west South Africa, extending from the Atlantic to about 19° 45' E. Lon., and lying between Namaqualand and Ovampoland proper. There is a waterless coast region, 100 miles wide, beyond which is a mountain district, followed farther inland by wide prairies. Copper and other minerals occur abundantly in the mountains. Vegetation is confined to the mountain valleys and the prairie region. The productions include ivory, feathers, skins, &c. The Damaras of Bantre stock are about 80,000 in number, of whom 50,000 are nomad mountaineers owning large flocks and herds. Walvisch Bay, the only harbor, was annexed to Cape Colony in 1884. In the same year the coast region was made a German protectorate.

Damas'cus Blades. Sword blades of remarkable excellence, formerly made at Damascus, and famous since the time of the Crusades for their exquisite temper, which enabled them, in skilled hands, at once to sunder bars of iron and to sever films of floating gauze. It is said that good *D. B.* can be bent like hoops and will fly back without injury. They are also famous for their beautifully lined and watered surface. The secret of their manufacture is unknown, though it is said that blades of equal temper have been produced in Russia.

Damassé (*däm-äs-sä'*), *n.* [*Fr.*] A Flemish or French fabric, woven with flowers and fancy designs.

—*a.* Woven with flowery ornamentation (applied to silk fabrics).—Having white decorations on a white ground (applied to ceramics).

Damian'a, *n.* (*Med.*) An extract made from the leaves of various species of the *Turneria*, a Mexican plant, thought to be valuable as a nerve tonic, especially in cases of sexual atony.

Damien de Venster, JOSEPH (FATHER DAMIEN), a Roman Catholic missionary; born in Belgium, Jan. 3, 1840. At the age of nineteen he was admitted to holy orders, and thenceforward practiced a life of self-denial which few, if any, have surpassed. Learning of the terrible condition of the lepers, when on a mission to Honolulu, in 1873, he established himself among them. He was physician, teacher, magistrate, and carpenter, and a helper in all things. For twelve years he escaped the fatal disease, and then fell a prey to its virulence, though he worked on in his noble self-sacrifice till the last. Died April 15, 1889.

Dam'rosch, LEOPOLD, M.D., musician; born in Posen, Prussia, Oct. 22, 1832. Graduated with high honors at the University of Berlin and became a physician, but preferred the study of music, which he continued, having as his instructors Hubert Reis on the violin, and Dehn in composition. In 1854 he gave up the practice of medicine, and started on a tour as violinist, meeting with such success that on his return to Posen he was appointed musical director at the Stadt Theater. He subsequently held a similar position in Breslau, eventually became leader of the Arion Society in New York, founded the Oratorio Society of that city, and later the Symphony Society. Dr. D. conducted, in 1881, in the Seventh Regiment armory, the finest musical festival that had ever been given in New York. Died February 15, 1885.

Damrosch, WALTER JOHANNES, musician, son of the foregoing, was born at Breslau, Prussia, in 1862; has resided in the U. S. since 1871. He inherited musical talent from his father, and succeeded him in his enterprises; has become the leading American conductor of oratorio and grand opera and the special exponent, in this country, of the Wagnerian school. Has directed and conducted successful operatic performances in New York and other principal cities for several seasons, producing the greatest works of Wagner and other eminent masters, and has composed some excellent music, including an opera based upon Hawthorne's tale of *The Scarlet Letter*. Mr. D. married, in 1890, Miss Margaret Blaine, daughter of the eminent statesman, James G. Blaine, and resides in New York city.

Danna, CHARLES ANDERSON, journalist; born at Hinsdale, N. H., Aug. 8, 1819. He attended Harvard College two years, but did not graduate on account of a disease of the eyes, though he afterward received the degree of A.M. He took up journalism and for many years held important positions on the *New York Tribune*, but resigned in 1862 in consequence of a disagreement with its editor, Horace Greeley. He entered government service and became Assistant Secretary of War (1863-5). After the war he edited the *Chicago Republican*, which did not succeed, and in 1868 he organized a stock company for the purchase of the *New York Sun*, of which he is still (1897) the able and trenchant editor. While connected with the *Tribune* he was co-editor, with George Ripley, of the *New American Cyclopaedia*; he has translated and published *The Black Ant*; edited *The Household Book of Poetry*; wrote, with Gen. James H. Wilson, a *Life of Gen. Grant*; and, with Rositer Johnson, compiled *Fifty Perfect Poems*. Died Oct. 17, 1897.

Dana, NAPOLEON JACKSON TECUMSEH, U. S. military officer; born in Eastport, Me., April 15, 1822. Graduated at West Point, and began his career by serving chiefly at frontier posts. Was engaged in the Mexican War, afterward became a banker at St. Paul, Minn., entered the Civil War at its outbreak and served to its close, rising to the rank of major-general. Resigned in 1865, and afterward engaged in mining and railroad operations.

Dan'aide, (*Mech.*) A hydraulic machine of ingenious construction and large utilization of power, consisting of two hollow cylinders, one within the other, with a narrow space intervening. The inner cylinder is closed at the bottom and there is an aperture in the center of the bottom of the outer. Partitions radiate from center to circumference between the bottoms, but do not

extend into the space between the cylinders. The whole is sustained on a vertical axis, about which it easily turns. If a jet of water be now admitted to the annular space, striking the surface of the cylinder at as near a horizontal tangent as possible, its friction sets the machine in revolution. Soon the revolving water, acting on the partitions at the base, exerts a force upon them which increases the velocity. It has been proved by experiment that from 70 to 75 per cent. of the water power employed is utilized by this machine. The name comes from the fable of the Danaïdes (*q. v.*), who poured water continually into a vessel from which it as continually escaped.

Dan'cing Mania, (*Path.*) A form of epidemic disorder, allied to hysteria, which has appeared from time to time, various instances of it occurring in Germany in the middle ages, while in Italy a somewhat similar affection, known as tarantism, was attributed to the bite of the spider called Tarantula. Similar epidemic have been observed in India and Abyssinia, and in modern Europe strong religious excitement has yielded similar results. To what extent imposture has entered into these manifestations it is not easy to decide; but it is certain that in many instances the convulsive movements were beyond the control of the will. They were doubtless the result of imitative emotions acting upon susceptible temperaments, perhaps instigated by a craving for sympathy or notoriety. The true *D. M.* of the mediæval period had its seat principally in the cities of Germany, the first instance occurring in 1374 at Aix-la-Chapelle, when assemblies of men and women, excited by the wild and frantic celebration of the festival of St. John, began to dance in the streets, screaming and foaming at the mouth as if possessed. This frenzy spread wildly through other towns, and broke out again from time to time in the following centuries. Example of the same kind occurred in the U. S. in the early camp meetings of the frontier settlements, in which convulsive movements of the most uncontrollable character were common.

Dan'die Din'mont. A name applied to a variety of short-legged dogs, having long hair, and apparently a cross between the otter-hound and the Scotch terrier.

Dan'enhower, JOHN WILSON, arctic explorer, born in Chicago, Ill., Sept. 30, 1849. Graduated from U. S. Naval Academy in 1870. Served on the *Portsmouth* in a surveying expedition to the Northern Pacific; helped to quell an insurrection at Honolulu in 1873; and was one of the officers in charge of the *Vandalia* during Gen. Grant's visit to Egypt and the Levant. He joined the *Jeannette* expedition, which started from Havre, France, went to San Francisco and thence sailed (July 8, 1879) for the Arctic Ocean via Bering Strait. The vessel was crushed in the ice and the crew, after dragging their boats for ninety-five days over the ice, took to the open sea. The boats were separated by a storm and all were lost but that of Lieut. D., which landed at Lena Delta, Sept. 17, 1881, and he reached the U. S. in June, 1882. He wrote *The Narrative of the Jeannette*. Died at Annapolis, April 20, 1887.

Dan'ites, or Destroying Angels, (*Amer. Hist.*) A name given by the Mormons to a secret society organized among them in 1838. It comprised originally about 300 men, who are said to have pledged themselves to execute the orders of their leaders, regardless of consequences. During the early history of Utah there occurred many robberies and murders which were ascribed to the D., though this was denied by the Mormons. A train of "Gentile" emigrants was attacked, and the party massacred by this body in 1857; for participating in which crime, twenty years afterward, John D. Lee, a member of the society, was tried, condemned and executed.

Dan'ube Canal. See CANALS.

Dar-Fur, a division of the Soudan in Central Africa, ranging from about 10° to 16° N. Lat., and 22° to 28° E. Lon., though its borders are not well defined. In the N. it is desert in character, but during the rainy season in the S. good crops are raised. Tobacco is largely cultivated. Copper and iron are the chief minerals. Cattle form the principal wealth of the inhabitants. It is inhabited by the Fulahs, a well built and intelligent race. It was annexed to Egypt in 1874, and is now under the control of the Mahdists.

Darjeel'ing. A sanitary station in the lower Himalaya, situated on a narrow ridge 7,167 feet above sea level. It is an increasingly popular summer resort for visitors and invalids. The fashionable month is October, after the rains, when the atmosphere is remarkably clear.—*D.* is also the name of a district of Bengal, with an area of 1,234 sq. m., devoted largely to the cultivation of tea.

Dark Room, (*Photog.*) A room from which actinic light is excluded; used for sensitizing and developing plates.

Dar'kle, *v. a.* To appear obscurely or intermittently.—*v. n.* To become gloomy or obscure; to darken.

Dar'ley, FELIX O. C., an American artist and designer, born in Philadelphia, June 23, 1822. As a book illustrator he achieved high popularity, his ablest performances being designs for pictorial editions of the works of Irving, Cooper, Dickens, Shakespeare, &c. Died at Claymont, Del., March 27, 1888.

Dar'ling, GRACE, a young woman noted for heroic daring, was born in Yorkshire, Eng., November 24, 1815. Her father, William D., in 1838, was keeper of a light-house on Longstone, one of the Farne islands. In the night of Sept. 6-7, 1838, the *Forfarshire* was wrecked here, and all of the 63 persons on board perished except 9, who, in the morning, were seen clinging to the vessel. Grace besought her father to attempt their rescue, and

Charles Robert Darwin

1809-1882

they together put off in a boat through the angry waves, succeeded in reaching the wreck, and bringing the survivors in safety to the shore. All the world sounded the praises of the brave girl, and money and other tokens of appreciation were showered upon her, but she did not long survive to enjoy her distinction. She fell a victim to consumption, and died October 20, 1842.

Darlingtonia. [Named in honor of Dr. Darlington, of Pennsylvania.] (Bot.) A remarkable genus of *Sarracenaceae*, found in California. *D. Californica*, known as the *California Side-saddle flower*, or *Pitcher plant*, is a perennial herb growing in marshy places. Its leaves all rise from the root, the adult ones being from eighteen inches to a foot or more in length, the stalk or pitcher tubular, gradually tapering downward and singularly twisted on the axis about half a turn, marked with strong veins and slender veinlets, and the summit vaulted and formed into a sac about the size of a hen's egg, on the under side of which is an oval orifice about half an inch in diameter, opening into the cavity of the pitcher; the upper part of this tube is of a dull orange color. The blade, which is borne on the end of the stalk, or pitcher, is narrowed at the base and deeply divided into two spreading, nearly lance-shaped, lobes, which are curved downward, and also often backward, resembling the lop-ears of some varieties of rabbit. The pitcher inside the hood is furnished with short conical hairs which point downward; and toward the base there are long, slender hairs, also pointing downward; remains of insects are sometimes found at the bottom. The flowers are single and nodding at the apex of a smooth stalk, which is furnished with straw-colored scales, and varies from two to four feet in length. When fully expanded the flower is about two inches in diameter; the calyx consists of five straw-colored acute sepals; the petals, of a like number, and pale purple in color, are narrowed and concave at the apex and broad below; the twelve to fifteen stamens are nearly hidden by the projecting summit of the ovary, which is top-shaped, slightly five-angled, and crowned by a short style with a five-lobed stigma. The fruit is a five-celled capsule about an inch in length, with numerous seeds.

Fig. 2810.

CALIFORNIA SIDE-SADDLE FLOWER. The flowers are single and nodding at the apex of a smooth stalk, which is furnished with straw-colored scales, and varies from two to four feet in length. When fully expanded the flower is about two inches in diameter; the calyx consists of five straw-colored acute sepals; the petals, of a like number, and pale purple in color, are narrowed and concave at the apex and broad below; the twelve to fifteen stamens are nearly hidden by the projecting summit of the ovary, which is top-shaped, slightly five-angled, and crowned by a short style with a five-lobed stigma. The fruit is a five-celled capsule about an inch in length, with numerous seeds.

Darmstetter (*därm-stä-tä*), ARSÈNE, French scholar; born Jan. 5, 1846, educated for a Jewish rabbi, but became interested in the study of philology. No one in this century has done more to throw light upon the history of the French language and literature. In collaboration with M. Hatzfeld he spent many years on the production of a new dictionary of the French language. The Doctor's degree was conferred upon him in 1877, and the same year he published *De la création actuelle de mots nouveaux dans la langue française*, &c. *A View of French Literature in the Sixteenth Century*, which he published jointly with M. Hatzfeld, is considered authority upon the subject. During the writing of these, and other works, he was busily engaged in teaching. All that this earnest student produced was full of originality, and his contributions to science have been many. Died Nov. 7, 1888.

Darnel, n. (Bot.) A grass of the genus *Lolium*. The common *D.* or rye-grass is *L. perenne*; the Italian *D.* is *L. italicum*, both useful fodder plants. The noxious bearded variety is *L. temulentum*.

Dartmouth College. (Educ.) An institution of learning instituted in 1754, at Lebanon, Conn., and subsequently removed to Hanover, N. H., where it was chartered as a college in 1769. As Lord Dartmouth, an English nobleman, took an interest in and made benefactions to the new college, it was given his name. The New Hampshire legislature, in 1816, passed an act changing its name to Dartmouth University and assuming control of its affairs. The trustees opposed this action, brought an action before the Supreme Court of the State, which sustained the legislature, and appealed to the U. S. Supreme Court, which sustained the college. Daniel Webster and other able counsel arguing its defence. As a result, the university organization was dissolved and that of the college resumed. *D. C.* has been conservative in its system of teaching, giving honor and precedence to the ancient classics, though it has introduced scientific and other modern studies. With it are associated the New Hampshire Medical College (1798), the Chandler Scientific School (1851), the Thayer Engineering School (1871) and the New Hampshire College of Agriculture and the Mechanic Arts (1866). It had in 1896, 46 instructors, 601 students, and a library of 85,000 volumes, the president being Wm. J. Tucker, D.D., LL.D.

Darwin. CHARLES ROBERT, F.R.S., an eminent English naturalist, born at Shrewsbury, in 1809, studied at Edinburgh and afterward at Cambridge, where he graduated in 1831. In the year of his graduation he was appointed naturalist on the *Beagle*, a vessel which was dispatched by the British government on a scientific expedition around the world. His observations during this journey were numerous and valuable, and after his return in 1836 he described them in his *Journal of Researches into*

the Geology and Natural History of the Various Countries visited by H. M. S. Beagle, a work replete with interest, and which has become almost a classic of travel. Other works which quickly followed were: *The Structure and Distribution of Coral Reefs*; *Geological Observations on Volcanic Islands*; and *Monograph of the Family Cirripedia*. While preparing these works, and later, Darwin was developing in his mind the famous theory with which his name is indissolubly connected, and which he gave to the world in 1859, in his epoch-making work, *The Origin of Species by Means of Natural Selection*. This work startled the world of science, new editions were called for at home and were issued abroad, and a war of controversy arose that sorely tried the new principle of organic development which it advocated, though it was widely accepted from the start by the younger school of naturalists. Darwin's following works were: *Fertilization of Orchids* (1862); *Habits and Movements of Climbing Plants* (1865); and *The Variation of Animals and Plants under Domestication* (1868). In 1871 there appeared a work only surpassed by the *Origin of Species* in the sensation it created: *The Descent of Man, and Selection in Relation to Sex*, in which for the first time he applied to man the theory of origin which he had

Fig. 2811.—CHARLES ROBERT DARWIN.

previously confined to the lower animals. In 1872 he published *The Expression of the Emotions in Man and Animals*. Later works from his pen were: *Insectivorous Plants* (1875); *The Effects of Cross and Self Fertilization in the Vegetable Kingdom* (1876); *Different Forms of Flowers on Plants of the Same Species* (1877); *The Power of Movement in Plants* (1880); and *The Formation of Vegetable Mould through the Action of Worms* (1881), the last named his latest work, and in which he showed that the mould which covers a large part of the earth is due in great part to the castings of earth worms. For many years Darwin dwelt at Down, in Kent, where he spent his time in careful and minute observations in his conservatories and garden and among his pigeons, fowls and other domestic animals. It was here that he worked out the details of his great theory, and gathered the facts for his supplementary works, which were largely the outcome of personal observations. He first brought the theory of evolution to the favorable consideration of the scientific world, and prepared the way for its general acceptance. He died April 19, 1882, and was buried in Westminster Abbey.

Darwin. ERASMS, an English physician and poet, born in 1731. He wrote a curious poem, *The Botanic Garden*, which has been greatly admired; and, in prose, *Zoönomia, or the Laws of Organic Life*, and *The Temple of Nature, or the Origin of Society*. Died 1802.

Darwinian Theory. (Biol.) The theory of the origin of species advanced by Charles Robert Darwin, often spoken of under the title of Darwinism, may be epitomized as follows: Its dominant feature is the substitution of natural causes for the supernatural influences previously held to prevail, its main thesis being that the appearance of new species is not due to an act of creation, but to a natural change from some preceding species, the influence at work being that which he has named Natural Selection, or, as Spencer has entitled it, the "Survival of the Fittest." It is in this respect a theory of evolution, though Darwin laid no claim to the origination of the evolution conception, which long antedated him, but only to a special application of it. He was by no means the first to advance a theory to account for the origin of species. A number of naturalists preceded him in this, notably Lamarck, in whose view the change from species to species was a result of individual effort on the part of animals; the neck of the giraffe, for instance, being gradually lengthened through persistent efforts to reach a higher level in browsing on the leaves of trees. This explanation, and the others advanced, proved far from satisfactory, and the problem remained open for Darwin and Wallace, both of whom reached the same conception almost simultaneously. Darwin, however, had worked it out so fully in his mind, and presented it with such a wealth of illustration, that full credit for the theory is given to him, Wallace having presented it with little argu-

ment or illustration. The theory of natural selection is based on the tendency of all organisms to vary. This is particularly marked in domesticated species, owing to the considerable change in their conditions of life, but it is constantly observable among wild species as well. No two blades of grass are alike, and the natural differences between individuals of the same plant or animal species are occasionally so marked as almost to constitute specific distinctions. Thus varieties arise, which may become permanent if the changed individuals move into a new territory, and are freed from the swamping influence of cross-breeding. A continuance of this process would yield sub-species, and in a further stage species would appear. The principle of variation, therefore, lies at the foundation of the Darwinian theory, as furnishing the basis on which it is built. The second fact to take into consideration is the tendency possessed by all organic beings to increase with extreme rapidity. Each plant produces annually hosts of seeds, each capable of yielding a new plant. Each of the lower animals lays multitudes of eggs or other reproductive elements. Even the higher animals produce young in such numbers that, if they were not kept down, the earth would soon be peopled with the descendants of a single pair. It is, of course, impossible for all the offspring of any species to procure food, escape their enemies, and survive to yield new young. They are destroyed in the germ, in the young, in the mature form, in such multitudes that a very small percentage survive. Between them there is an incessant and intense struggle for existence, each doing its best to obtain a share of the food supply and to escape its enemies. In this struggle the strongest, the best adapted, or the most favored by circumstances, survive, the others perish, and as a general rule the individuals which have varied in any way that gives them an advantage in the struggle, will survive, while those whose variation is of an unfavorable kind will perish. It is this preservation of favorable variations and destruction of unfavorable ones, which we denominate Natural Selection, or, in Spencer's phrase, the Survival of the Fittest.—*Heredity.* But variation is not the only principle to be considered in the phenomena of life. The principle of heredity is of equal importance. This is a tendency in all animals and plants to reproduce the form and characteristics of their parents, a tendency which prevents any extreme deviation in offspring. As a result of these two opposed and constantly acting principles, heredity and variation, all offspring bear a certain close resemblance to their parents, while varying from them in certain minor particulars. In consequence, the deep-seated characters of species are very persistent; while in all species superficial and minor changes incessantly appear. Each organism exerts a vigorous hereditary influence over its offspring, and this is the case with any marked and favorable variety, which tends to transmit to its young the characters to which it owes its survival. Therefore, when in the incessant struggle for food and safety any variety survives, while a host of less favored competitors perish, this variety is apt to produce young of the same variety. And by a continuation of this process, aided in many cases by a removal of the favored variety to some new locality, the variety becomes a permanent race. This process repeated yields varieties more and more unlike the original species, a distinct species finally appearing, which, from its being better adapted to the existing conditions of nature, may quite replace the former. In this view it must be borne in mind that changes in the conditions of nature also take place and aid the process described; they growing unfavorable to the old and favorable to the new species. Natural selection may modify the egg, the seed, or the young in its various stages, as easily as the adult; so that the struggle extends downward to the foundation, it existing between germs and young as well as between adult organisms.—*Sexual Selection.* There is another element in the situation to which Darwin gave much attention—that named by him Sexual Selection. This refers to the struggle of the males for the females, as a result of which the most vigorous tends to leave the greatest number of young. In this struggle special weapons of offence, like the spurs of the cock, the stag's horns, &c., are developed, and these are transmitted to the young. Again, the males manifest a choice in the selection of females, and the females much more so in the selection of males, choosing them for some special property, melody of voice, beauty of plumage, size, strength, &c. This agency in selection, no doubt, exerts an important influence in the preservation of varieties. It was through his observation of the agencies at work in domestic breeds, and the great variation they often exhibit, that Darwin came to the most vital of his conclusions. This artificial selection, as it is called, is a principle of long application, special breeds being separated from their kindred and cross-breeding prevented. The consequence has been a series of highly marked varieties, as in the case of the dog, of which numerous persistent and strikingly distinct breeds now exist. The pigeons present another important illustration. In these the carrier, pouter, fanail and tumbler differ decidedly, both within and without; sufficiently so to make of them not only distinct species, but even distinct genera if found in a wild state. Yet they have been proved to have all descended from a common ancestor, the rock-dove (*Columba livia*). Numerous other instances of variation under domestication might be adduced. Thus, two flocks of Leicester sheep, kept equally pure, varied so in fifty years that when compared they appeared to be quite different varieties. Changes of this kind, produced rapidly under domes-

tication, are held to go on slowly in a wild state. Equal variations appear in nature as in domestication, and though the varieties are not artificially separated and bred apart, yet nature to some extent fulfills this function, while the principle of Survival of the Fittest acts to preserve favorable varieties even if no separation from the original stock takes place.—*Laws of Variation.* We are largely ignorant of the causes of variation. Theories have been advanced to explain it, but the evidence is wanting. We know that changed conditions produce at times permanent effects. Thus, one species of shell-fish, when moved from brackish to fresh water, changed so in its character as to seem a widely different species. Habit, use and disuse also yield marked effects, and other influences are doubtless at work. But below all this lies a general law of variation, requiring no special influences, and inherent in organic nature, the changes arising from influences brought to bear upon the germ.

—*Objections.* The Darwinian theory has had many difficulties to contend with. Darwin himself weighed it thoroughly, and honestly stated all the objections which occurred to him, explaining them away as far as he could, yet admitting their force. He pointed out (1) the definiteness of species and the variety in which a transitional form between species is seen in nature; (2) the great degree of modification in structure and habits which the theory rendered necessary; (3) the acquirement through natural selection of such marvelous instincts as those of the bee and ant; (4) the sterility of crossed species and the fertility of crossed varieties. Many other objections were made by the opponents of the theory, to some of which Darwin gave satisfactory answers, others of which he failed to set aside. One objection is, that if so many transitional germs appeared as the theory requires, why are not numbers of them found in the geological strata? The explanation of this is the extreme imperfection of the geological record, and the, as yet, minor degree to which it has been explored. Where so few species, of all those that existed, are known, we cannot look for very many linking varieties, and these, when found, are marked as distinct species, the species they connect having usually disappeared. Darwin closes with these words a work which has had a greater effect on the world of science than any other work ever produced: "It is interesting to contemplate a tangled bank clothed with many plants of many kinds, with birds singing on the bushes, with various insects flitting about, and with worms crawling through the damp earth; and to reflect that these elaborately constructed forms, so different from each other, and dependent on each other in so complex a manner, have all been produced by laws acting around us. These laws, taken in the largest sense, being Growth with Reproduction; and Inheritance, which is almost implied by reproduction; Variability from the indirect and direct action of the conditions of life, and from use and disuse; a Ratio of Increase so high as to lead to a Struggle for Life and, as a consequence, to Natural Selection, entailing Divergence of Character and the Extinction of less improved forms. Thus, from the war of nature, from famine and death, the most exalted object which we are capable of conceiving, namely, the production of the higher animals, directly follows. There is grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms, or into one; and that, while this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved."—*The Descent of Man.* The Darwinian theory, as originally presented, said nothing about man's origin and descent, Darwin undoubtedly wishing to avoid the flood of adverse criticism to which this would have given rise. Twenty years afterward, when he had won a host of defenders, he presented his views on this subject, arguing that man was a true outcome of the animal line of development, his immediate ancestor being some form of anthropoid ape, kindred to but not identical with the larger apes now existing. As the case of Darwinism stands to-day it must be said that some of the objections urged against it remain unanswered, and many naturalists feel that other influences, perhaps other laws, must be adduced before it can be considered as fully established. Many American naturalists have gone back to the older theory of Lamarck, and evolved what is known as Neo-Lamarckism, in which it is maintained that conscious effort has been an important agency in the development of species. Other hypotheses have been presented in Germany and Britain, and much has been done to elucidate the darker parts of the problem. These, however, belong rather to the subject of Evolution than to that of Darwinism. See EVOLUTION.

Darwinism. *n.* The doctrine of natural selection advocated by Charles Robert Darwin in his works, *The Origin of Species* (1859), and *The Descent of Man* (1871). See DARWINIAN THEORY.

Date Line, International. The line at which the date of the day changes on going round the globe. If a man could travel round the earth in a day with the sun, he would experience no night, and he would be in the same day at the end as at the beginning of his journey, though he would find it called a day later by the people at his journey's end. But if he travelled more slowly, he would find himself at the close of each day's journey a little behind the sun in point of time, and in completing the circuit, these accumulated losses would make a complete day. He has not really lost a day, however, since he has added a little to the length of each day. If he goes round the earth in the direction opposite to the

sun, the effect would be opposite—he gains on the sun; so that his day is shorter, the sun setting an hour earlier for every 15° of latitude. So on completing the circuit of the earth he would gain a day. In the one case, if he made no change in his estimate of time, he would find himself, for instance, in Monday, while the stay-at-home people were in Tuesday. In the other case he would declare the same day to be Wednesday. To avoid this complication it becomes necessary to change the date at some point in the journey, as at the 180th degree of longitude from the starting point. The 180th meridian from Greenwich has been generally adopted as an *I. D. L.*, or one on which this change of date is to be made. On crossing this the eastward traveller, who is gaining on the sun, will change his date from Wednesday back to Tuesday, and the westward traveller will change his from Monday to Tuesday, so as to produce a uniformity of dates, though the variation to each at this point is but half a day. This meridian has been adopted by English and American travellers mainly from the fact that it crosses no land except a few small islands. The lack of attention to this rule has caused a peculiar state of affairs in two groups of Pacific islands. The Sandwich and Society Islands are but a few degrees of longitude apart, yet their inhabitants observe different days as the Sabbath. The missionaries who came to the one travelled eastward, to the other, westward. The former crossed the 180th meridian without adding a day to their reckoning, as they should have done, so that the Society Islands are a day behind the rest of the world in their date.

Daubigny (*dô-bên-yê*), CHARLES FRANÇOIS, artist, born in Paris, Feb. 15, 1817. Studied with Edmé D. and Paul Delaroche. In the Salons of 1857, 1859 and 1869 first class medals were awarded him, and in 1874 he was appointed officer of the Legion of Honor. In his youth D. travelled in Italy, spending some time while there in study, but most of his paintings were executed in France. He had several studios, one of which was a boat, in which he made leisurely trips, painting as he journeyed. Besides his paintings, which have been the delight of many because of their truth to nature, he etched a number of plates, and in this branch of art showed great talent. In landscape painting he stood among the foremost artists of the century. Much of his work is in the U. S., and in the Museum at Rouen is *A Snipe in the Optevos Valley*, one of the finest of his canvases. Died in Paris, Feb. 19, 1878.

Daubrie (*dô-brê*'), GABRIEL AUGUSTE, mining engineer and geologist, born at Metz, 1814. Attended the Polytechnic School and the School of Mines; entered the corps of mining engineers in 1834, and was appointed one of the commissioners to explore Algeria. He was appointed professor of Mineralogy and Geology in the Academy of Strasburg, also engineer of mines in that residency. Subsequently held other professorships and was inspector-general of mines. In 1872 he was made director of the School of Mines. In 1858 he was appointed officer of the Legion of Honor, and grand officer in 1869. His election as member of the Institute was almost unanimous. He is the author of a number of memoirs in the *Annales des Mines* and in the *Comptes Rendus* of the Academy.

Daudet (*dô-dâ*), ALPHONSE, French dramatist and novelist, born at Nîmes, May 13, 1840. He was educated at the Lyons Lycée. In 1857 he went to Paris with his brother Ernest, and in the following year published a volume, *Les Amoureux*. His first play was produced at the Odéon in 1862. Some of his best literary work appeared in the form of contributions to journals. His novels are realistic, and his plan of mingling fiction with the facts of the day made his works popular and widely read. His story of *Froment jeune et Rister aîné* was crowned by the French Academy and dramatized by the author. In *Le Nabob* he drew a picture of the Duc de Morny, and others of his characters are recognized portraits. The work entitled *Tartarin de Tarascon* is an amusing satire on the characteristics of the natives of the South of France. These are but a few titles of his many striking works of fiction.

Daudet, LOUIS MARIE ERNEST, novelist and historian, brother of Alphonse D., born at Nîmes, France, May 31, 1837. Removed to Paris in 1857 and held a number of official positions, finally becoming chief clerk of the Senate. He early began the writing of novels and historical works, the first named being numerous. Among the best of his novels are *Jean le Guir*; *La Baronne Amalfi*; *Madame Robernier*, &c. One of his historical works was crowned by the French Academy and a prize granted to the author—*L'Histoire des Conspirations royalistes du Midi sous la Révolution*. In 1868 he was admitted to the Legion of Honor.

Davenport, FANNY LILY GIPSY, actress, born in London, April 10, 1850. Her first appearance as an actress was made in Boston at the Howard Athenæum. She has played in Philadelphia, and in New York, under the management of Augustin Daly, at the Fifth Avenue Theater, personating many different characters. In Sardou's play of *Cleopatra* she has achieved great success, and has made a number of starring tours through the U. S. She was married in 1879 to Edwin H. Price, but was divorced, and subsequently married to Melbourne McDowell, an actor of leading rôles.

Da'vid City, in Nebraska, a city, the cap. of Butler co., on the F., E. & Mo. V. R. R., 78 m. W. of Omaha; the shipping center of a productive grain and stock-raising region. Pop. (1897) about 2,600.

Da'vids, THOMAS WILLIAM RHYS, a British Orientalist, was born at Colchester, Eng., May 12, 1843. He studied at the University of Breslau; subsequently entered the civil service in Ceylon, and while a resident of that

colony held various judicial appointments. In 1877 he was called to the bar at the Middle Temple. He is the author of *Buddhism*; *Translation of the Fausbøll Collection of Buddhist Birth-Stories*; *Hibbert Lectures*; and he translated from the Pāli parts of the *Jātakī*, besides various papers on Buddhist, Jain and Pāli subjects.

Da'vidson, GEORGE, A.M., Ph.D., astronomer, born in Nottingham, Eng., May 9, 1825. He came to the U. S. in childhood, and attended the Central High School of Philadelphia, graduating in 1845; joined the U. S. Coast Survey. Among his duties was that of chief engineer of an expedition for the survey of a ship-canal route across the Isthmus of Darien. He also reported upon the products of Alaska, &c., and made a geographical reconnaissance of its coast in 1867. In 1874 he was the conductor of the U. S. transit-of-Venus party in Japan. He travelled in China, India, Egypt, and Europe, for the purposes of scientific study, and besides other important work, took charge of the telegraphic longitude work, and of the main triangulation and astronomical party carrying the geodetic work across the continent. From 1877-84 was regent of the University of California, and has been President of the California Academy of Sciences since 1874. He is the author of numerous works on harbor and river improvements, transit instruments and observations, irrigation, and many communications in the *Proceedings* of the California Academy of Sciences.

Davidson, SAMUEL, D.D., LL.D., an eminent theologian and biblical critic, born near Ballymena, Ireland, in 1807. Studied at the Royal College, Belfast, giving special attention to philosophy and biblical literature. After his ordination as a Presbyterian divine, he accepted the professorship of Literature and Biblical Criticism in the college at Belfast. A change having taken place in his views with regard to church government, he responded to the call of the Lancashire Independent College to occupy the chair of Biblical Literature and the Oriental Languages. This position he afterward resigned on account of the opposition against him that was raised by his work, *The Text of the Old Testament and the Interpretation of the Bible*, which was published in 1856. The cause of complaint was a too free treatment of the Scriptures. One of his latest works is *The Doctrine of Last Things Contained in the New Testament Compared with the Notions of the Jews and the Statement of the Church Creeds*.

Davidson, THOMAS, LL.D., F.R.S., F.G.S., paleontologist, born in Edinburgh, Scotland, May 17, 1811. Studied science and art in both Italy and France, and in 1858 was appointed honorary secretary of the Geological Society of London. For his *Illustrations of the Silurian Life* he received a Silurian medal from the council of the Geological Society. He was awarded the Wollaston medal, and in 1870 was presented with the gold medal of the Royal Society, &c. He was twice elected vice-president of Section C, British Association, and was a member of the general committee. His principal work was *British Fossil Brachiopoda*. Died Oct. 16, 1885.

Davidson, THOMAS, M.A., scholar, born Oct. 25, 1841, near Fetterangus, parish of Deer, Aberdeenshire, Scotland; educated at Aberdeen University, graduating with the highest classical honors, and the Simpson Greek prize, in 1860. He spent a number of years in teaching, in 1866 he removed to Canada, and in the following year to St. Louis, where he spent eight years, editing what there the *Western Educational Monthly*. In 1875, he changed his residence from St. Louis to Cambridge, Mass. He has contributed a number of articles to periodicals on philology and philosophy. He lived for several years in Italy and during that period published Rosmini's *Philosophical System*; *The Parthenon Frieze*; and other essays; *Aristotle and Ancient Educational Ideas*.

Davidson College, (*Educ.*) An institution of learning, founded in 1837, in Mecklenburg co., N. C., which received its name from William Lee Davidson, who donated the estate on which it was built. Maxwell Chambers, of Salisbury, N. C., presented it with an endowment of \$258,000. It is under Presbyterian control.

Da'vies, HENRY EUGENE, JR., lawyer and general; born in New York, July 2, 1836. He was a student of Harvard, Williams, and Columbia Colleges, graduated in law from the last named, and was admitted to the bar in 1857. He entered the Civil War as captain of the Fifth New York Volunteers, rose rapidly in rank, and was made major-general in 1865. In January of the following year he resigned. He was public administrator of the city of New York, from Jan. 1866-69, and assistant district attorney of the Southern district of that city from July, 1870, to Dec., 1872. Died at Middleboro, Mass., Sept. 6, 1894.

Da'vis, ANDREW JACKSON, an American clairvoyant and author, born in Blooming Grove, Orange co., N.Y., Aug. 11, 1826. His education was limited to five months in primary school. He was first employed on a farm, and then apprenticed to a shoemaker. After the development of his clairvoyant powers he became widely known as the "Poughkeepsie seer," and for many years practiced as a healer of the sick. He claimed that while the clairvoyant state the most difficult subjects could be understood and discussed. He published a number of works, including *Stellar Key to the Summer Land*; *Harbinger of Health*; *Death and the After Life*, &c., calling his system the "harmonial philosophy." With the aid of Prof. Wittig, of Breslau, and Wilhelm Besser, of Leipzig, and under the patronage of a wealthy Russian, Alexander Aksakof, most of his works have been translated into German.

Davis, CUSHMAN K., lawyer and politician, was born in 1838; Governor of Minnesota, 1874-76, and U. S. Senator

Jefferson Davis

1809-1889

from that State, 1887-99; a Republican in politics, a ready debater, and one of the leaders of his party.

Davis, DAVID, LL.D., jurist, born in Cecil co., Md., March 9, 1815. He was educated at Kenyon College, Gambier, O.; read law with Judge Bishop in Lenox, Mass., and at the New Haven Law School in Conn. He sat in the convention of Illinois in 1847 for framing a new State constitution, and, after holding several important official positions, was appointed by President Lincoln associate justice of the Supreme Court of the U. S., Oct. 8, 1862; on his election as U. S. Senator from Illinois he resigned this office. During President Arthur's administration he was president of the Senate. Died in Bloomington, Ill., June 26, 1886.

Davis, EDWIN HAMILTON, physician and archaeologist, was born in Ohio in 1811, and for many years was professor of Materia Medica and Therapeutics in the New York Medical College. His principal work, *Monuments of the Mississippi Valley*, was published by the Smithsonian Institution.

Davis, GARRETT, an American lawyer and statesman, was born at Mount Sterling, Ky., Sept. 19, 1801. He received a classical education, chose the law as his profession and rose to distinction. In 1839 he was elected to Congress, but had previously held office in his own State. The Whig party had in him an active member, and at the commencement of the Civil War he was elected to the U. S. Senate as an old-line Whig to succeed John C. Breckenridge, and remained a Senator for the rest of his life. He devoted much time to agriculture and was considered high authority on the subject. Died in Paris, Ky., Sept. 22, 1872.

Davis, HENRY WINTER, statesman, author and orator, was born at Annapolis, Md., Aug. 16, 1817, graduated at Kenyon College, Ohio, in 1837. Subsequently studied at the University of Virginia, giving particular attention to the reading of law, in which he acquired distinction. He was several times elected to Congress, and by his efforts did much to prevent the secession of his State, and also secured an amendment to the State constitution which emancipated the slaves of Maryland. At the expiration of the Civil War he advocated suffrage for the colored race. He is the author of *The War of Ormuzd and Ahriman in the Nineteenth Century*. He was a philanthropist, ever ready to serve in the cause of justice, and a man of strong principles, with courage equal to his convictions. D. at Baltimore, Dec. 30, 1895.

Davis, JEFFERSON, soldier and statesman, born in Christian (now Todd) co., Ky., in 1808. Educated at Transylvania College, Ky., and at West Point, graduating in 1828, and brevetted 2d lieutenant. Served with distinction seven years in the regular army, mostly on the Indian frontier; resigned his commission in 1835, and became a cotton-planter near Vicksburg, Miss. Entering politics, he gained a reputation as a popular speaker, and in 1845 was elected to Congress, where he took a conspicuous part in debate, particularly in matters relating to war. The next year the Mexican War broke out and D. went to the front in command of the 1st Mississippi volunteers, fought bravely at Monterey, and at Buena Vista, where he was wounded. Offered by President Polk a commission of brigadier-general of volunteers, he declined it on the ground that a military appointment by a federal executive was unconstitutional. From 1847 to 1851 he was U. S. Senator, and was chairman of the committee on military affairs. In 1853 he became Secretary of War in President Pierce's cabinet, and exercised a powerful influence in the administration. Returning to the Senate in 1857 he became Democratic leader of the 36th Congress. When his State seceded from the Union, Jan. 9, 1861, he resigned his seat in the Senate, was appointed Commander-in-chief of the Southern army, and on Feb. 18 was elected President of the Confederate States. In 1862 he was re-elected for six years, his military and executive ability, and his devotion to the people of the South and its sectional interests, fully justifying the repeated choice. Upon the downfall of the Confederacy, D. was captured at Irwinville, Ga., May 10, 1865, taken to Fortress Monroe and imprisoned two years. On May 13, 1867, he was brought into court at Richmond and released on bail. He was never brought to trial, but finally suffered to go free by the general amnesty declared at Christmas, 1868. In 1881 D. published *The Rise and Fall of the Confederate Government*. He died Dec. 6, 1889, at his home in Biloxi, Miss. In 1893 his body was removed to Richmond, Va.

Davis, JEFFERSON C., soldier, was born in Clarke co., Ind., in 1828. Served in the Mexican War; was in Fort Sumter when it was fired upon in 1861; the following year shot and killed General Nelson at Louisville during an altercation, but was held blameless. Commanded a division of the Federal army at Stone River, Dec. 31, 1862, and at Chickamauga, Sept. 19, 1863; marched with Sherman "to the sea" (1864); fought the Modoc Indians (1873); died in 1879.

Davis, JOHN CHANDLER BANCROFT, LL.D., diplomatist; born at Worcester, Mass., Dec. 29, 1822; studied at Harvard College, and became a lawyer. He held the office of Assistant Secretary of State, from 1869 to 1871, 1873 to 1875, and again 1881-82. He was sent as the representative of the U. S. to the Geneva Tribunal of Arbitration. Became again Assistant Secretary of State, 1873-75, was appointed U. S. Minister to Germany, in 1875, and afterward Assistant Secretary of State, 1881-82. He is the author of: *The Case of the United States at Geneva*; *Mr. Sumner, the Alabama Claims, and their Settlement*.

Davis, NATHAN SMITH, LL.D., physician, educator and author; born at Greene, Chenango co., N. Y., Jan. 9, 1817. Up to the age of sixteen his school life had been

confined to the winter months. He then attended Cazenovia Seminary, and at seventeen began his medical studies. After his graduation from Fairfield Medical College, he began the practice of medicine at Binghamton, N. Y., writing at the same time for the medical journals. He was twice elected president of the National Medical Convention, the first call for which, in 1849, was largely the result of his efforts. After his removal to Chicago, in 1849, he took an active interest in the welfare of that city. Besides his duties at the Rush Medical College, in which he was professor, he took a prominent part in forming the Chicago Medical Society. In 1859, he founded the Chicago Medical College, which now forms the medical department of the Northwestern University; also aided in founding the Chicago Academy of Science, and the Washington Home for Inebriates. He received the honorary degree of A.M., in 1871, and that of LL.D., in 1880, from the Illinois Wesleyan University. He is the author of *A Text-book of Agriculture*; *History of Medical Education and Institutions in the United States*, &c. He was also editor of various medical journals.

Davis, REBECCA (HARDING), novelist, born at Washington, Pa., June 24, 1831. She married, in 1863, L. Clark D., who was at that time editor of the *Philadelphia Inquirer*. Her novels have been widely read, and include: *Dallas Galbraith*; *A Love Unto Herself*, and several others. She was a contributor of short stories to magazines and it was one of these, entitled *Life in the Iron Mills*, which attracted attention to her productions, and gave her a reputation as an able writer of realistic fiction.

Davis, RICHARD HARDING, author and editor, born in Philadelphia, April 18, 1864; son of L. Clark and Rebecca (Harding) D. Educated at Lehigh University, and Johns Hopkins University, Baltimore. As a journalist he has been reporter for the *Press* and other Philadelphia newspapers. Was also on the staff of the *New York Evening Sun*, contributing to this paper some of his best short stories. His works include *Gallagher and Other Stories*; *Van Bibber and Others*; *The West from a Car Window*, &c. In 1890, he became managing editor of *Harper's Weekly*, but of recent years has been engaged chiefly as special correspondent for various leading daily newspapers.

Davis, WILLIAM MORRIS, M.E., meteorologist and geographer, born in Philadelphia, Feb. 12, 1850; educated in the Lawrence Scientific School and Harvard University. He was appointed instructor in Geology in Harvard in 1876, and professor of Physical Geography in 1890. He is a corresponding member of the German Meteorological Society, and director of a similar society in New England. His scientific articles and studies are numerous, and his lectures on *Cyclones*, *Whirlwinds*, and *Tornadoes*, are a valuable introduction to meteorology.

Davitt, MICHAEL, Irish political leader, born at Straide, Mayo, Ireland, in 1846. He began life in a cotton factory, and from the age of fifteen to twenty-one worked in a printing-office. In 1866 he joined the revolutionary movement, and in 1870 was arrested on an indictment of treason-felony and sentenced to fifteen years' penal servitude. After serving part of this sentence he was released on ticket-of-leave. He was a constant promoter of nationalist principles, and in conjunction with Charles S. Parnell and others founded the Land League, becoming its most prominent manager. Subsequently he was made superintendent of the American Land League. In 1892 he was sent to the House of Commons as the member from North Meath.

Dawes, HENRY LAURENS, statesman, born at Cumtucket, Mass., Oct. 30, 1816; graduated from Yale College in 1839; studied law and received the degree of LL.D. from Williams and Yale colleges. He served in the Massachusetts Legislature, both in the House and Senate, and was a member of Congress from its 35th to its 43d sessions. He declined the candidacy for election to the 44th, but was subsequently elected (1875) to the U. S. Senate, as a Republican, to succeed Charles Sumner, and was twice re-elected (1881-87, 1887-93). Among the measures in which he took an active interest were various tariff questions and bills for improving the status of the Indians.

Dawkins, WILLIAM BOYD, F.R.S., an English geologist and palæontologist, born at Welshpool, Montgomeryshire, Dec. 26, 1838; studied at Jesus College, Oxford. He was the first to explore the caves of Great Britain, and did much by his efforts to advance the knowledge of and interest in prehistoric times. After an examination of the fossil collections in the museums of continental Europe, his work on *Cave Hunting: Researches on the Evidence of Caves Respecting the Early Inhabitants of Europe*, was published, and following, came *Early Man in Britain and his Place in the Tertiary Period*. He was on the staff of the geological survey of Great Britain, was professor in Owens College, in 1873, and previously had been appointed curator of the museum in Manchester. He has also lectured and contributed many articles to reviews and magazines. Societies on both sides of the Atlantic have made him a member. Such honors have been well earned, for throughout his career he has not only been a devoted student of Science, but has been noted for his executive ability and excellent judgment.

Dawson, SIR JOHN WILLIAM, LL.D., F.R.S., geologist; born in Pictou, Nova Scotia, Oct. 13, 1820. He received his education at Pictou College and Edinburgh University. He has devoted himself to geological research, and also to educational work. In the former he made a special study of the geology and mineralogy of Nova Scotia and New Brunswick, largely adding to the number of known species of Post-pliocene fossils. His dis-

covery in 1864, in the Laurentian rocks, far below the range of known fossils, of a supposed giant foraminifer which he named *Eozoon canadense*, gave rise to a long-continued controversy, and the organic origin of this form is not generally admitted. He has been superintendent of education in Nova Scotia, principal of McGill College, Montreal, and professor of Natural History. He also established and became principal of the McGill Normal School. Scientific societies both of America and Europe have elected him to membership, and in 1885, he was knighted. His works include: *Acadian Geology*; *The Story of the Earth and Man*; *Modern Science in Bible Lands*; *Modern Ideas of Evolution*, &c. He opposes the extreme Darwinian theory.

Dawson, SIMON JAMES, Canadian civil engineer, born in Scotland in 1824. While he was young his parents moved to Canada. He received an appointment from the Canadian government for the planning and superintending of the engineering works on the St. Maurice river, and also commissions to explore the country westward from Lake Superior to the Saskatchewan, and for the construction of the route to the Red river. Jointly with others he concluded a treaty with the Salteann tribe of Indians, in 1873. Was a member of the Legislature of Ontario, and from 1878 to 1891, of the Dominion Parliament.

Day, HENRY NOBLE, D.D., LL.D.; born in New Preston, Conn., Aug. 4, 1808. He graduated at Yale College and spent three years there as tutor. In 1836 he was ordained pastor of the First Congregational Church in Waterbury, Conn. Subsequently became professor of Sacred Rhetoric, in Western Reserve College, Ohio, and in 1850, president of the Ohio Female College. He resigned in 1864, removing to New Haven, Conn., and devoted himself to literary work. He was the author of a number of text books: *The Art of Discourse*; *Logic*; *Rhetorical Praxis*, &c. He also contributed to literary, theological and educational periodicals. Died in 1890.

Day, in Oklahoma, a W. co., bordering on the Texas "Pan-handle"; the surface is rolling, the soil fertile; a good stock-raising region. Pop. (1897) about 1,000. Cap. Idland.

Dayton, WILLIAM LEWIS, was born in Somerset co., N. J., in 1807; studied law, and began its practice in 1830; became U. S. Senator from his native State in 1842, and again in 1845 and 1851, during which period he was a Whig and opposed the extension of slavery, although he voted against the Fugitive Slave Bill; was a defeated candidate for Vice-President on the Fremont ticket, in 1856; was made Attorney-General of N. J., in 1857, and in 1861 was appointed U. S. Minister to France. Died in Paris, 1864.

Dayton, in Kentucky, a city of Campbell co., adjoining Newport, on the Ohio river, opposite Cincinnati, O. Has extensive manufactories, distilleries, &c. Pop. (1897) about 5,000.

Dayton, in Tennessee, a city, the cap. of Rhea co., on the Q. & C. R. R., 38 m. N. N. E. of Chattanooga. Has iron furnaces, flouring mills and pearl button factories; in a mining region. Pop. (1897) about 3,000.

Dayton, in Washington, a city, the cap. of Columbia co., 38 m. by rail N. E. of Walla Walla. Limestone and marble are mined. Pop. (1897) about 2,200.

Daza (dä-thü), HILARIO N, Bolivian soldier, born at Sucre, 1840. In 1898 he became member of a revolutionary faction and took part in various disturbances. He at one time averted a revolution by carrying the news of the outbreak to La Paz, riding 50 leagues a day. This action won him the grade of colonel. The Bolivians proclaimed him President, May 4, 1896. He declared war on Chile, but, being incompetent as a commander, his soldiers mutinied and he fled to Arequipa. After learning that Campero had been declared President of Bolivia, he retired to France. He subsequently returned to Bolivia and was assassinated Feb. 28, 1894.

Deaconesses. An order of women in the early church, which corresponded to that of deacons. It ceased in the Western Church in the 5th century, but continued in the East till the 12th or 13th. During the Middle Ages its duties of teaching, charity, &c., were assumed by the nuns and Sisters of Charity. Within the 19th century a somewhat similar order was instituted in connection with the Lutheran Church and the Episcopal Church of England and the U. S. In the early church the D. were regular officials in every congregation. As now instituted they take the form of associations, known as D. in France and Germany, but usually as Sisterhoods in England and America. The largest deaconess institution connected with the Lutheran Church is that at Kaiserswerth, on the Rhine. It includes a deaconess, or mother-house, where the sisters live, and various adjoining buildings, schools, asylums, &c. In 1836 it opened with a single sister. It now contains several hundred, while out-stations have been established in all parts of the world. In England there are many sisterhoods, in connection with the Established Church, the largest and most successful being the Deaconess Home at Milnway Park, which has many women engaged in mission work in various parts of the world, while in London the sisters work among the most degraded classes, in house visitations, supplying dinners, nursing, teaching, &c. In the U. S. there are several deaconess institutions connected with the Protestant Episcopal Church, and a number of sisterhoods. The oldest deaconess institution is that founded in 1872 for the diocese of Long Island, which has charge of the Church Charity Foundation in Brooklyn, and other charitable institutions. The sisterhoods are somewhat widely distributed, their members being actively engaged in charitable work, while dependent for existence on the charity of the public.

Dead Letter Office. A division of the post-office service to which undelivered mail matter is sent after a specified time, or if of such a character that it cannot be transmitted. Letters and packages are returned to the writer, when the address is given and they do not contain perishable or injurious matter; otherwise they are destroyed.

Dead Reckoning. (*Navigation.*) The calculation of a ship's place at sea without taking a stellar observation. The estimation is made from a known locality, by aid of the rate of sailing, as shown by the logs, and the time elapsed, while the direction is obtained from the compass. *D. R.* is liable to errors, but must be trusted to when the stars are not visible.

Dead'wood, in *South Dakota*, an important city, cap. of Lawrence co., on F., E. & Mo. V. and C., B. & Q. R. Rs. The trade center of the Black Hills region, and has very extensive mining, manufacturing and shipping interests. *Pop.* (1897) about 5,000.

Deal'-fish, n. (*Ichth.*) A genus of fishes (*Trachyp-terus*) of the ribbon-fish family, having a body very much compressed, with a dorsal fin extending the entire length of the back. The tail fin rises almost vertically from the horizontal line of the back-bone, as though dislocated and reset at a right angle. The *D.-f.* is large in size, from 5 to 8 feet long, and is apparently a deep-sea fish, though frequently appearing on the shores of Norway, Iceland and northern Ireland.

Death'tick, n. (*Entom.*) A beetle of the genus *Anobium*, which emits a ticking sound, especially at night. Its habitat is usually human dwellings; and since the sound made by this insect becomes quite audible in the stillness of the sick-room, it has come to be regarded by the superstitious as an omen of death; hence the name. The most common form of this ridiculous superstition is the belief that the sound mentioned is a sign that some member of the family will die within 12 months. There are two principal species, *A. tessellatum* and *A. domesticum*. The ticking sound is produced by striking the head against wood work, and is thought to be a sexual call.

Death-trap, n. Any structure, edifice or device which imperils life; as a theater or other public building devoid of fire escapes, a mine without adequate means of exit, &c.

Death Valley. (*Geog.*) A narrow valley in California, between the Panamint and Funeral Mountains, so called because a party of emigrants perished there in 1849. The central level is covered with salt and lies 300 or 400 feet below sea level. It is traversed by the Amargosa river, a usually dry channel, though probably at times occupied by deep floods. The salt of the valley is supposed to have been brought by such torrents from the surrounding desert, and left on evaporation of the water. *D. V.* is considered the hottest and driest place in the U. S. A temperature of 122° F. has been observed there.

Debel', v. a. To drive out; to conquer; to expel from a territory. (*Rare.*)

De Bow', JAMES DUNWOODY BROWNSON, economist and statistician, was born at Charleston, S. C., in 1820; admitted to the bar in 1844, and in the same year became editor of the *Lutheran Quarterly Review*; in 1845 began the publication, in New Orleans, of *De Bow's Commercial Review*; in 1847 took the chair of Political Economy and Statistics in the University of Louisiana, and in 1853 published, in three octavo volumes, *Industrial Resources of the South and West*. Died in 1867.

Debran', v. a. To remove bran from; an operation in milling cereals, especially wheat.

Debridement (*deh-brēd-mōng*), *n.* [*Fr.*] (*Surg.*) An operation for the removal of any obstructing or restricting growth or substance; as, the cutting of a stricture, enlarging the opening of an abscess, &c.

Debts, National. The national debt of the U. S. on Jan. 1, 1791, was over \$75,000,000, it being due to the assumption by the government of all the debts, State and national, left by the Revolutionary War. For the succeeding fifteen years it remained with little change, and then began to decrease, it being about \$45,000,000 at the outbreak of the War of 1812. This war rapidly added to it, raising it to \$127,000,000 at the beginning of 1816. During the succeeding years of peace it again fell, each item of the debt being paid off at maturity, the result being that in 1835 the country was not only out of debt, but had several millions of surplus which was in part distributed among the States. The panic and commercial difficulties which soon followed, and the loss of government funds through the failure of unsound banks in which they had been placed, brought back a measure of debt, the amount gradually increasing until July 1, 1860, when it reached about \$65,000,000. From that time forward the war loans rapidly added to it, bonds and treasury notes being issued to a great amount, the popular loan authorized Feb. 25, 1862, being for the great sum of \$500,000,000. The result was a phenomenal rapidity of increase, the highest amount of debt being reached on Aug. 31, 1865, when the debt, less cash in the treasury, stood in round numbers at \$2,763,000,000. Decrease took place with considerable rapidity, the net debt in 1870 being \$2,331,000,000; in 1880, \$1,919,000,000; and in 1890, \$890,000,000. On Nov. 1, 1896, the total debt, less cash in the treasury, was \$836,676,221. This small decrease since 1890 was due to increased expenses of administration and a diminished revenue, new loans to the amount of over \$260,000,000 having been issued in the few preceding years.—*Debts of the Nations.* The largest national debt is that of France; followed by Great Britain and Ireland, Russia, Austria-Hungary, Italy, Spain and Prussia, in the order named, each having a

public debt in excess of \$1,000,000,000. The following table shows the gross national indebtedness of the principal nations in 1890, and the proportion of each per capita:

Countries.	Net Debt.	Debt per Capita.
Argentine Republic.....	\$284,867,069	\$70.40
Austria-Hungary.....	2,866,339,539	70.84
Belgium.....	380,504,099	63.10
Bolivia.....	14,763,367	12.38
Brazil.....	585,345,927	41.80
Chile.....	85,192,339	31.96
Colombia.....	63,451,583	16.36
Denmark.....	33,004,722	15.66
France.....	4,446,793,398	116.34
Tunis.....	34,881,500	23.25
German Empire.....	77,577,719	1.57
Baden.....	71,165,252	42.95
Bavaria.....	335,503,105	60.03
Breuen.....	16,217,400	89.94
Hamburg.....	59,202,946	94.85
Prussia.....	1,109,384,127	37.03
Saxony.....	143,897,747	41.11
Württemberg.....	107,735,500	52.93
Great Britain and Ireland....	3,350,719,563	52.93
India.....	881,003,592	3.27
Cape of Good Hope.....	110,817,720	77.56
Canada.....	237,533,212	47.51
New South Wales.....	233,289,245	214.87
New Zealand.....	184,898,305	298.01
Queensland.....	129,204,750	333.46
South Australia.....	102,177,500	321.00
Tasmania.....	22,235,345	147.46
Victoria.....	179,614,005	161.63
West Australia.....	6,509,736	150.23
Greece.....	107,306,518	49.06
Guatemala.....	10,825,836	7.59
Hayti.....	13,500,000	14.06
Hawaii.....	2,302,235	26.57
Honduras.....	63,394,267	146.77
Italy.....	2,324,826,329	76.06
Japan.....	305,727,816	7.83
Mexico.....	113,606,675	9.98
Netherlands.....	430,589,858	95.56
Nicaragua.....	1,711,206	4.28
Norway.....	13,973,752	7.13
Paraguay.....	19,633,013	59.56
Peru.....	382,175,655	145.77
Romania.....	180,145,800	32.75
Russia.....	3,491,018,074	30.79
San Salvador.....	6,013,300	9.05
St. Domingo.....	9,865,256	16.17
Servia.....	60,811,330	30.20
Spain.....	1,251,453,696	73.85
Sweden.....	64,220,807	13.53
Switzerland.....	10,912,925	3.72
Turkey.....	821,000,000	37.20
Egypt.....	517,278,300	75.88
United States.....	915,962,112	14.63
Venezuela.....	22,517,437	11.00
TOTAL (including other nations not enumerated)...	\$27,396,055,389	

In the foregoing table the figures given for France are exclusive of the annuities, capitalized at nearly \$2,000,000,000, but include the floating debt. The debt of India is figured at 50 cents per silver rupee, and this face value would be reduced about 40 per cent. if expressed in gold.—*Economics of Public Debts.* While indebtedness of any form is ordinarily to be considered a misfortune to the debtor, economists have contended that a public debt, if held chiefly by the citizens of the debtor country, is a public blessing. The argument is that the people, having thus a direct pecuniary interest in the prosperity of the nation and the stability of government, become more loyal from selfish considerations, if from no better motive. Further, the interest paid on a debt so held does not drain the country of its natural wealth and industrial productions. But when a national debt of some magnitude is largely held by foreigners, it is inevitable that a considerable proportion of its annual increase will be diverted to other countries without a return of any kind; and this must be regarded as a national misfortune. The public debt of France, aggregating, with the annuities, the enormous sum of about \$6,446,793,398, is less burdensome to that nation than the infinitely smaller debts of many other countries, simply because the debt is chiefly held by the citizens of that Republic, and the resources of the nation as a whole are not largely drawn upon to meet the interest payments.

Debts, Recovery of. According to reliable statistics, a majority of the causes of this character adjudicated in the courts arise from unwillingness or inability to pay, on the part of the debtor, rather than from a just legal defense. A careful record of the operations of the English county courts, covering many years, shows that nearly 95 per cent. of such causes are decided in favor of the plaintiff; which certainly would not be so if the plaintiff had, in any large number of cases, a just reason for resisting payment.

De'buscope, n. (*Optics.*) A modified form of the kaleidoscope, employed in the production of decorative designs, and consisting essentially of a reflecting instrument having a double mirror set at an angle. (Named for M. Débus, its inventor.)

Decadation, n. (*Music.*) Modulation by decades; either the theory or its practice.

Dec'adrachm, n. (*Numis.*) An ancient Grecian coin worth 10 drachmas.

Dec'agram or Dec'agramme, n. (*Met. Syst.*)

A weight of ten grams, equal to about 154½ troy grains

Decaisnea (*de-kā'-ne-ah*). (*Bot.*) A genus of plants order *Lardizabalaceæ*, characterized by an erect shrub with large pith, pinnate leaves, racemose inflorescence and greenish flowers; sepals 6, linear and awl-shaped

petals none; flowers sometimes abortive, or becoming staminate or pistillate; stamens six, free or united by their filaments; ovaries three with an oblique style; ovules very numerous, on two thread-like placenta. The fruit consists of follicles filled with pulp. The only known species is *D. insignis*, found at Sikkim and Bhutan in the Himalaya at the height of 6,000 to 10,000 feet, flowering in May and fruiting in October. The fruit is very palatable, and is eaten by the Lepchas.

Fig. 2812.—DECAISNEA INSIGNIS.

Decalcoma'nia, n. [*Fr. decalquer*, counter-trace, manie, madness.] A method of transferring design and pictures upon the surface of china, glass, marble wood, and other substances for decorative purposes. The picture is thinly coated with prepared cement, and the surface to be decorated carefully washed and cleansed. The picture is then placed as desired, and strongly pressed in place with a cloth or roller. Then the paper is wet with a damp sponge, and when sufficiently moist is removed, the picture remaining permanently on the face of the object.

De Camp', JOHN C., Rear-Admiral U. S. Navy, born in New Jersey, Oct. 5, 1812. He began his career as a midshipman in the navy in 1827, and subsequently commanded the *Iroquois* at the passage of Forts St. Philip and Jackson, and the capture of New Orleans, and took part in every action on the Mississippi under Admiral Farragut, always winning distinction for gallant bearing. Died in Burlington, N. J., Jan. 24, 1875.

De Candolle', ALPHONSE LOUIS PIERRE PYRAME, Swiss botanist, born at Paris, Oct. 27, 1806; son of the celebrated botanist, Augustin Pyrame de C. He was educated at Geneva, and studied law, receiving the degree of doctor. Yet he chose for his lifework the science in which his father had become famous. In 1831, he was appointed professor of botany in the Academy of Geneva, but afterward resigned. In 1834, he succeeded his father as Professor of Natural History at Geneva. Much of his time was given to original research, and in 1835, he published his *Géographie botanique raisonnée*, work of great value, which brought him a world-wide reputation. *De C.* was elected a member of scientific bodies both in America and Europe. He was chosen foreign associate of the French Academy of Sciences, whose list of associates is limited to eight. He continued the publication of his father's celebrated work *Prodromus systematis naturalis regni vegetabilis*, and wrote several other works on plant life.

De Candolle, ANNE CASIMIR PYRAME, a Swiss botanist, born at Geneva, Feb. 20, 1836. He was educated at the University of Geneva, receiving the degree of Ph.D. He has given special attention to the formation and study of leaves, and among his treatises on this subject an important one is *Considerations sur l'étude de la phyllotaxie*. Much of his time was spent aiding his father Alphonse de C. in editing the *Prodromus*. The last four volumes contain numerous monographs written by him on families of plants.

Deca'ni. [*L.*] (*Eccles.*) Of or pertaining to a dean; as, the *decani* side of a choir (*i. e.*, the side to the right of one facing the altar, opposed to *cantoris*); this being the side occupied by the dean in a cathedral.

Decazes (*deh-kāz*). *ÉLIE, DUC DE*, French statesman born at St. Martin-du-Laye, Sept. 28, 1780. Counselor to King Louis of Holland, and later secretary to Letitia Bonaparte. In 1814, he connected himself with the Bourbon cause, and held several official positions previous to that of Prime Minister, in 1819. This office he resigned when he was charged with being an accomplice in the murder of the Duke of Berry. He was subsequently created a duke, and in 1820, sent as ambassador to England. He supported Louis Philippe after the revolution of 1830, and in 1818 was made duke of Glücksburg by the king of Denmark and sent to that country on a special mission. Died Oct. 24, 1860.

Decazes, LOUIS CHARLES ÉLIE ARMANIEN, DUC D. statesman, born in Paris, May 29, 1819, eldest son of *Élie D.* In 1848, was Minister to Spain and Portugal, but retired from this office at the outbreak of the Revolution. He was a member of the National Assembly and Minister of Foreign Affairs from 1873-77. Died Sept. 17, 1886.

Deceased Wife's Sister. (*Law.*) At one period in Europe marriage with the sister of a deceased wife was prohibited as incestuous, both branches of the Christian Church, Eastern and Western, condemning it. The early canon law forbade marriage between

relatives to the seventh degree (afterward changed to the fourth degree), a decree founded on the Mosaic law respecting the intermarriage of kindred. But this canon law was by no means strictly enforced, papal dispensations being common. By the 19th century restriction in this direction had largely vanished, the only remnant of it being in Great Britain, where the law prohibiting marriage with a brother's widow or a deceased wife's sister is still retained. On the continent of Europe, in the United States, and in most or all of the British colonies, it has been abrogated, and full freedom of action in this direction exists. In Britain this system was confirmed by a law passed in 1835, by which all such marriages were declared null and of no effect. In Scotland, by the law of 1567, all connections prohibited in the 18th chapter of Leviticus are declared incestuous and punishable by death; and in the 18th century Barbara Tannahill was executed for contracting a marriage with the husband of her deceased sister. For many years past agitation for the abrogation of this law has been kept up in Parliament. A bill to repeal the law was offered in Parliament in 1841, but its introduction was refused. Since that date the subject has been brought before nearly every Parliament, but, though several times reaching a second reading, it has invariably been rejected. More recently the supporters of the measure have endeavored to carry it through the House of Lords, but with the same negative result. The main hindrance to legislation seems to have been the opposition of the churches. Despite the law, such marriages are frequent among the poorer classes, and their expediency is upheld by many arguments, but church conservatism still controls the situation.

Decolorimeter. *n.* An apparatus for testing the bleaching power of a substance, as a bleaching powder or solution.

Decorated Style. (*Arch.*) A style in Gothic architecture which prevailed in England from near the end of the 13th to about the end of the 14th century. In this style the simple forms of the early pointed architecture became more complex, the moldings growing more numerous and refined, while the pillars consist of clustered shafts or moldings arranged on a lozenge plan. Various other decorative features are introduced, especially in the tracery of the windows, which becomes intricate and constitutes the most prominent characteristic of the style. In the beginning of the 15th century the Decorated gradually passed into the Perpendicular style.

Decoration Day. A day set apart in the United States for visiting the graves of soldiers and decorating them with flowers by surviving comrades or friends; frequently termed Memorial Day. It occurs on May 30, and is a legal holiday in thirty-three of the States, in the territories of Arizona and Oklahoma, and the District of Columbia. Several of the Southern States have appointed a Confederate Memorial Day, the date being April 6 in Louisiana, April 26 in Alabama, Georgia and Florida, and May 10 in North and South Carolina.

Decorative Art. The application of the fine arts to objects which have a practical purpose, and are not produced solely as articles of beauty. Thus the term does not apply to painting or statuary, but to the ornamentation of useful things, a practice which is now greatly developed and is receiving increased attention among cultivated peoples. The chief of the decorative arts is architecture—the making of a building beautiful by artistic proportion and gracefulness of form and appropriate ornamentation. But the term applies as well to the ornamentation of furniture, weapons, utensils, &c., its field being a vast one, and its development having begun in the most remote period of human labor. See CERAMICS.

Costa. BENJAMIN FRANKLIN, D.D., historical writer, born in 1831, at Charlestown, Mass.; graduated at the Biblical Institute, Concord, N. H., 1856. After his ordination he settled in New York, and became pastor of the Church of St. John the Evangelist. Has listed several journals and has written a number of historical works, including: *Sailing Directions of Henry Hudson*; *Verrazano, the Explorer*; *Pre-Columbian Discovery of America by the Northmen*.

Leems, CHARLES FORCE, D.D., LL.D., clergyman and educator, born in Baltimore, Md., Dec. 4, 1820. Graduated in 1839, from Dickinson College, Carlisle, Pa., and engaged in preaching and teaching, occupying Methodist Episcopal Churches in the South and becoming professor in the University of North Carolina, in Randolph College, and president of Greensboro Female College. In 1866, established and became pastor of the Independent Church of the Strangers in New York city, as also president of Rutgers Female College and of the American Institute of Christian Philosophy. He edited *and Leslie's Sunday Magazine* and published various works, including: *The Light of the Nations*; *Wit, Wisdom and Pathos*; *Devotional Melodies*; *Home Altar*; *Chips and Chunks for Every Fireside*. Died Nov. 18, 1893.

Deep Sea Exploration. Investigation of the deeper areas of the ocean began well within the 19th century, and its extended prosecution, with the phenomenal results obtained, is a matter of the last 30 years. The 100 fathom line has long been known to navigators as the "deep-sea lead," the water below that depth being considered as the "deep sea." Further research has led to divisions based on more extended knowledge, the depths being laid out on more scientific principles into two main regions. The first of these is the littoral region, that extending out from the shores of the continents, and comprising that portion of the ocean throughout which light can penetrate, marine algae grow, and herbivorous animals live. The 100-fathom

mark may be taken, in a general way, as the extreme depth of this. The gradual slope of the littoral region usually changes somewhat abruptly into much steeper slope, descending to the floor of the ocean, which averages about 2,500 fathoms in depth, and spreads out in a gently undulated plain over a vast area. This is known as the benthic or abyssal region, while the intermediate sloping area has been called the archibenthic region. These last two regions constitute the "deep sea." For the method of exploring this deep area, see DEEP SEA SOUNDINGS. In the present article we propose to confine ourselves to the efforts and results of exploration. It was long held that the abyssal depths of the ocean were destitute of living organisms, and this opinion was not set aside by the early attempts to explore these depths. The earliest revelation made of the life of the deeper ocean was attained by Sir John Ross, during his first Arctic voyage in 1819, when he sounded to a depth of 1,000 fathoms, and brought up strange forms of life attached to his sounding line. In 1838 some dredging was done by the Wilkes' expedition, and in 1840 Sir John Ross dredged to a depth of 400 fathoms, finding the waters prolific of life at that depth. Others followed, but this depth was not exceeded until 1860, when the *Bulldog*, sent to examine a proposed northern cable route, brought up on her sounding line 13 star fishes from a depth of 1,260 fathoms. A telegraph cable, laid under the Mediterranean, from Sardinia to Africa, was found when taken up to be covered with animals on parts that had lain in water 2,000 fathoms deep. Yet these significant indications made little impression on the minds of naturalists, Edward Forbes advocating, as a result of his researches in the Aegean Sea, that the ocean is barren below the 300-fathom line. His conclusions were generally accepted, the facts to the contrary being overlooked or ignored. Yet still earlier the Professors Sars, father and son, had dredged in the seas off the Norwegian coast and shown the presence of life at depths of from 1,000 to 1,400 fathoms. These researches only served to extend the depth in which known forms could exist, the faunas found being very similar to those of the littoral waters, so that the opinion was still generally held that only stragglers from the surface waters descended to the depths and that their range of descent must be very limited. This scientific dogma was overthrown in 1867, as a result of the explorations made in the Florida straits by the U. S. Coast Survey, the depth reached being 850 fathoms. The result was startling to the adherents of the old theory. The animals brought up were not alone profuse in number, but were so strange and peculiar in character that it became evident that a new world of animal life had been reached, and the interest of naturalists everywhere was strongly aroused. These Coast Survey explorations were diligently continued in the two succeeding years, while on the *Blake*, from 1877 to 1880, Alexander Agassiz and other naturalists obtained most important results. The U. S. Fish Commission entered diligently into the same field of work, with the specially adapted vessels *Albatross* and *Fishhawk*, which have been engaged since 1872, on both shores of America, in explorations of the most valuable and fruitful character.—*European Explorations.* The work thus done by Americans has been ably seconded by the English, French and other nations. Between 1868 and 1872 the deep waters of the Mediterranean and North Atlantic were investigated by Carpenter, Thomson and Jeffreys, in the *Lightning*, *Porcupine*, *Valorous* and *Shearwater*. Norway continued her explorations with the *Voringen*, 1876-78; France followed with the *Travailleur* and the *Talisman*, and Italy with the *Washington*, the result being a vast increase of our knowledge of the abyssal conditions of the Mediterranean and Atlantic waters. But of those explorations far the most important was that made by the *Challenger* (See CHALLENGER EXPEDITION).—*Deep-Sea Life.* The animals found in the depths of the ocean belong to nearly every marine class, the *Challenger* in a depth of over a mile bringing up 200 specimens belonging to 79 species and 55 genera; in a depth of two miles, 200 specimens belonging to 84 species and 75 genera; and in a depth of three miles, 50 specimens belonging to 27 species and 25 genera, not counting Protozoa. Even at a depth of four miles fishes and animals belonging to all the chief invertebrate groups have been found. Algae, on the contrary, are not found at depths below 200 fathoms, so that this deep-sea animal life must be in great measure nurtured on animal food or on microscopic surface-forms, such as diatoms and oscillatoria, which sink to the ocean depths after death, and yield some relics of nutritious tissue as food. Many of them again prey upon their weaker neighbors, being provided with remarkable adaptations to aid them in this. These are light-yielding or phosphorescent organs, which are supposed to be intended to light up the ocean depths and reveal their prey to carnivorous forms, or otherwise to aid in the exigencies of the dark depths of ocean. These organs vary in character, being in some cases rows of tubercles; in others, eye-like spots extended in rows along the body; again, large round spots of the brightness of mother of pearl, also in rows; and fourthly, diffuse particles of a white glandular substance. All these organs are believed to be light-yielding, and are probably at the command of the fish, which is capable of lighting its way at will. Many of the forms of invertebrate animals are also light-yielding, the contents of the trawl, when drawn to the surface, often being brilliantly phosphorescent. An important argument in favor of this interpretation of the organs mentioned is, that while in many cases the animals brought up are blind, their eyes being atrophied, yet, as a rule, the eyes of deep-sea

animals are of large size, and sometimes of immense proportions, indicating their use in vision under circumstances of very feeble illumination. The blind forms often possess enormous tactile organs, touch with them taking the place of vision.—*Affinities of deep-sea life.* It was at first supposed that the deep-sea fauna would yield us antique forms, relatives of the ancient geologic fauna, preserved by the homogeneous temperature and conditions of their habitat. This has not proved to be the case, so far as the forms yet found are concerned. Some of them, indeed, show indications of antique origin, but the mass of them approach in character the forms now dwelling in the littoral region, and probably originated in the gradual descent of such forms. In truth, the range of deep-sea fishes is very great. Certain forms which dwell in the surface waters of some regions have been dredged from great depths in others, and the presumption from this is that littoral forms can, without great difficulty, adapt themselves to the widely different conditions of deep-sea life. This may also serve to explain the variety of coloration found, which is quite considerable; while some of the colors are bright, certain crustaceans being of brilliant red hue. Many of these animals also display indications of protective mimicry, and some have burrowing habits, conditions not likely to arise from the exigencies of a life passed in darkness. Thus, there is much reason to believe that these animals are, generally at least, descendants of recent surface forms, and have preserved some of their original features and habits, while varying in others. They present, it is true, many abnormal conditions of structure, the head or jaw being in some cases enormously developed, while the body is reduced to a ribbon form. Yet, despite this strangeness of appearance, they do not belong to new orders, but are simply modified types of surface genera. As regards the immense pressure of water to which they are subjected—about a ton to the square inch at 1,000 fathoms' depth—they have no difficulty in sustaining it. The tissues of the animals are permeated with the water, and the pressure, thus equalized within and without, is not felt. On bringing them to the surface, however, the effect of the sudden diminution of pressure becomes evident, they appearing often in a dilapidated condition. Deep-sea fishes possess very fragile tissues, and light and fragile bones, at times nearly destitute of calcareous material. The muscular system is also feebly developed, the muscles being thin and the connective tissue loose and feeble. The great pressure may have something to do with this, as it would tend to compress these loose tissues.—*Bottom deposits.* Deep-sea exploration has yielded other information of much interest. Outside the littoral sediments, arising from land drainage, and which extend some distance down the outer slopes, we reach, at a considerable distance from land, pelagic deposits whose origin is in part still a matter of question. The intermediate and most extensive deposit is a so-called "Blue Mud," found just outside the 100-fathom level, of grayish or bluish color, and containing particles of minerals derived from the land, principally quartz. This blue mud is estimated to cover about 14,500,000 sq. miles of the earth's surface, and is found along the coast of continents and large islands, and in all partly enclosed seas. Off the coast of Brazil it is of a red color, from the ferruginous matter brought down by the rivers, while elsewhere it becomes green, due to the presence of the mineral glauconite. Volcanic mud and sand are deposited around islands of volcanic origin, and coral mud and sand around oceanic coral islands. Of true pelagic deposits there are five types, four being of organic origin, the fifth and most extensive, of inorganic origin. The four are named from the remains of organisms they display. Globigerina ooze receives its name from its multitude of dead shells of Foraminifera, largely belonging to the genus Globigerina. These live in the surface waters of the ocean, and after death their shells descend to the bottom and accumulate in moderate depths. On reaching greater depths these gradually disappear, their calcareous substance perhaps being dissolved. Pteropod ooze is closely similar, except that it has a greater abundance of the shells of small surface mollusca, the Pteropods and Heteropods. Diatom ooze is characterized by the silicious shells of diatoms, and Radiolarian ooze similarly by a preponderance of silicious radiolarian shells. In all these oozes there is more or less mingling of forms, their special names coming from the preponderant form. The abundance of shells present shows that there is a considerable and steady rain of the minute surface-forms to the bottom as they die, and indicates the main source of nutriment for deep-sea animals. Nearly the whole of the deeper abysses of the ocean is occupied by a red clay, its color being due to the oxides of manganese and iron. In its shallower regions calcareous fragments appear, but in the deeper red clay only a mere trace of carbonate of lime is present. Silicious remains are generally found, with minute particles of volcanic origin. Concretions of iron and manganese are often present, of all sizes up to that of a potato. These gather around nuclei, such as sharks' teeth and the ear bones of whales. Red clay, whose origin is not clearly known, appears to accumulate very slowly. It covers in all about 51,000,000 sq. miles of ocean bottom, of which 37,000,000 are in the Pacific.

Deep Sea Soundings. The work of sounding the depth of the ocean began in the 18th century, where a depth of 234 fathoms was attained in the Arctic Ocean. In 1818, Sir John Ross reached a depth of 1,000 fathoms, but the true abyssal depths were first sounded in 1840 by Sir James Clarke Ross, who employed a small line with a weight of 300 pounds and touched bottom at the

depth of 2,677 fathoms. In 1843, Commander Davis, of the U. S. Coast Survey, touched bottom off Block Island at 2,100 fathoms, and in 1847, Capt. Stanley, of the British Navy, reported a depth of 2,500 fathoms. Yet the heavy lead and thick line usually employed in these early experiments rendered their results somewhat uncertain, the weight of the rope continuing to drag it down after the bottom had been reached. Iron and steel wires were next used, but they broke from their weight. Thin lines, with heavy weights, were also tried, the line being cut when bottom was touched, and the amount of cord lost estimated by deducting the length of that remaining from the known length of the whole. This system seemed promising, yet proved uncertain in its results. In 1854, John M. Brooke, a passed midshipman in the U. S. Navy, invented a method which is still in general use. The weight on his line had a detaching apparatus, which was thrown off on reaching the bottom, so that only the line, bringing a small sample of the bottom, needed to be drawn in. This method has been improved by Commander Sigsbee, the detachment of the sinking weight being rendered more certain, while the sounding rod is provided with a valve that encloses a satisfactory sample of the bottom. The use of wire in sounding having proved unsatisfactory, hempen line was tried, and this alone was used in the numerous *Challenger* soundings. A machine for using steel piano-wire for this purpose was produced in 1872, by Sir William Thomson. The weight unwinds this wire from a reel, which registers its number of revolutions, thus allowing the length of wire run off to be easily calculated. This device, in connection with the Brooke and Sigsbee detaching apparatus, has revolutionized D. S. S. Various contrivances for obtaining specimens of the bottom have been devised, as also for determining the deep-sea temperature by means of self-registering thermometers, while bottles for obtaining samples of water and instruments for determining the direction and force of currents have been added.—*Dredges*. For bringing up specimens of the deep-sea fauna various forms of dredges and trawls are used. The "tangles," which are merely large swabs of hempen rope picked out into twine, are very effective in entangling the spiny forms. Organisms of a rough or spiny character may be brought up in great numbers by this arrangement in places where a rough bottom prevents the use of the dredge. The dredge and the beam-trawl are of the same character as those used in shallow water, the latter being double, so that it will work, no matter which side reaches the bottom. To these steel wire rope is fastened, and steam power is employed to draw in the dredge. Those are for bottom use. To explore the intermediate water, nets or traps of various forms are employed, so made that they can be sent down closed, opened at a certain depth, and closed again before being drawn up, so that the depth at which the catch, if any was made, may be known.

Deer'ing, in Maine, a post-township of Cumberland co., adjoining Portland; contains the villages of East Deer- ington, Stroudwater, Stevens' Plains, &c., and is the seat of extensive and varied manufacturing interests. Pop. of township (1897) about 5,875.

Defenestration, *n.* Act of throwing out of a window, or the result of such act; a mode of punishment in vogue in Bohemia during the middle ages and perhaps for some time subsequently.

Defensor, *n.* [Lat.] A defender; one who defends. —In civil law, one who appears for another before a court of justice, as a guardian.—In old Roman law, a magistrate having charge of the affairs of minors, &c. (*Eccles.*) A guardian of church property; a patron of the church.

De For'est, JOHN WILLIAM, A.M., author, born in Seymour, Conn., March 31, 1826. He entered the Civil War in 1861, serving until 1865; was brevetted major. He has written *Oriental Acquaintance*; *The History of the Indians of Connecticut*; *Miss Ravenel's Conversion*; *The Oldest Courtships*, &c.

Deforest, *v. a.* To clear of forests; to remove forests, by cutting down or otherwise destroying. (Opposed to *afforest*.)

Deformities in Organisms. (*Biol.*) These are variations in the form of a body as a whole, or in one or more of its parts, and embrace three groups: the *hereditary*, the *congenital*, and the *acquired*. In the hereditary group there is a marked tendency for the deformity to recur in the line of descent, as in cases where extra fingers and toes reappear through a number of generations. Preservation of variations of this character is a feature of the Darwinian law of heredity; if of value in the struggle for existence, the variation may maintain itself indefinitely and replace the former condition. Variations which have no such value are apt to disappear after a few generations, and, if sufficiently marked to be considered such, may be classed as *hereditary* deformities. *Congenital* deformities are more frequent and usually more marked in character, probably due to disturbing influences that affect the germ or embryo of what would otherwise prove a normal organism. They arise from defective or from perverted development. In the case of *arrested* development, if the whole body is affected, a dwarf is produced; if only individual parts or organs, there may be a great variety of local lack or partial development of limbs or organs, causing malformation of special regions of the body. In case the local arrest of development is complete, whole organs being absent, what is known as a monstrosity appears. Thus, the creature may be destitute of a brain (*anencephalic*), a skull (*acrania*), a lower jaw (*agnathia*), all the limbs (*amelus*), or one or more of them (*monobrachius*, *monopus*). In the case of *perverted* development there may

be a welding together of two normally distinct parts. Thus, in the "siren-monster," the lower limbs are welded into a single tapering extremity. The causes of these deformities are little known, though recent experiments with eggs and germs show that they can be artificially produced. Thus, by varying the temperature of the hatching apparatus and varnishing the egg-shells, Panum produced deformities in chicks. A similar result occurred when the egg was kept in a vertical position; while by varnishing the whole egg, except a Y-shaped streak on one side, Gerlach produced a double-bodied chicken. More recent experiments with the reproductive germs of invertebrate organisms have yielded a great variety of deformed organisms, and certain types of monstrosities can be produced at will. In the human subject a great variety of malformations are on record. In the case of the "siren-monster," in which the lower limbs are fused, dissection shows that the full double set of bones may be present, though much distorted in position. In the "Cyclops" there is a similar fusion of the eyes, an irregular organ of vision occupying the center of the face. Arrest of size may yield dwarfs of harmonious development, yet less than half the normal height, or it may be confined to a single limb. On the other hand there are cases of excessive development, yielding giants at times more than eight feet in height. Such dwarfs or giants commonly produce normal offspring. Excessive development may also appear locally, yielding perhaps, a finger or toe of such enormous size as to need removal. Again, distortion may arise from partial paralysis at an early stage of development, yielding club foot, club hand, &c.; and natural fissures of the embryo which should close during development may remain open, as in harelip, cleft palate and the like. Duplication of parts may take many forms, from excess of fingers and toes, to a double-headed or a double-bodied monster, reaching its ultimate in two complete but connected organisms, as in the Siamese twins and various other differently connected examples. As regards *acquired* deformities, these arise as the result of disease or injury at any time after birth, and may be due to such injuries as burns, fractures or dislocations, and such diseases as rickets, leprosy, and rheumatic affections. There are also "trade deformities," the result of malformations arising from the pursuit of some injurious industry.

Degeneration in Organisms. (*Biol.*) Degeneration is a term applied of late years to cases in which the principle of evolution seems to work backward, the animal or plant descending to a lower stage of existence, or some of its organs losing their full function and becoming atrophied, abortive, and simplified in structure. These changes do not belong to the class of Deformities (*q. v.*), but are true evolutionary results, arising in the gradual way of evolutionary changes generally, and yielding results of advantage to the organism, or dispensing with organs that have become useless, as the eyes in cave animals. In these cases the adult animal may become structurally below the level of its young or larval stages. For instance, the Tunicates show a progressive development until they gain swimming powers, with gill slits and a notochord. Then the larva settles into a fixed habitat, loses its tail and notochord, becomes twisted into a loop, while the gills change into a sieve-like sac. Again, a crustacean whose larval state displays a fully developed eye, may lose this organ in the mature form if confined to a dark habitat. There are many parasitic crustaceans in which similar degeneration appears, the swimming and other organs of the larva being lost, and the creature becoming simplified in structure and fixed in habitat. Thus, in the parasitic Entomostraca the swimming larvae resemble those of other crustaceans, but after they become attached to other animals they develop into worm-like forms which are little more than food-sucking and reproductive organisms. The barnacles present a degeneration of a somewhat different kind. In all these cases the embryo starts out as if destined to progress into a regular instance of its class of organism; then its development is checked and it descends into a simpler form, in accordance with the demands of its new habitat and mode of life. This degeneration has arisen gradually, from change in mode of life and the consequent uselessness of some organs and the development of new and useful ones. Thus, when a crustacean became a parasite on some other animal, its legs became useless, and gradually atrophied and disappeared, while the mouth parts changed in form and became organs adapted to sucking the mucus or the body fluids of its host. Degeneration must thus be distinguished from reversion to an ancestral type (*Atavism*), or occasional abortion, though gradual abortion is a characteristic feature of the process of degeneration. It may be due to the influences of a new environment, to cessation of function in some organ, or to some constitutional cause of a less evident kind. Absence of certain kinds of food, of heat, light, &c., may withdraw the stimulus necessary for the growth of the organs, or a superfluity of some special food may cause a variation in the general mode of food-getting and cause one group of organs to preponderate over others. Sluggishness, or loss of activity, as in the change from an active to a fixed state, may cause the slow degeneration of organs that are no longer employed. Degeneration is not confined to animals, but many examples of it appear in plants. It is shown in those plants that have assumed a dependent habit, as in parasites and saprophytes, in which the vegetative organs of the plants, not being needed, have atrophied. Thus in the dodder the leaves have degenerated and the stem has become weak and brittle, not needing strength for self-support.

In the fungi numerous instances of degeneration appear, in some of them the vegetative functions having largely vanished, while those of reproduction are greatly developed. In the flowering plants also there are many instances of degeneration in the floral organs.

DeGiers', NICHOLAS CARLOVITCH, Russian diplomat, born May 9 (O. S.), 1820; educated at the Imperial Lyceum, and at eighteen entered the Asiatic Department of Foreign Affairs. Was ambassador to Persia (1863), and subsequently to Berne and Stockholm. He was made minister of Foreign Affairs in April, 1882. His policy as regarded the conflict between Russia and Great Britain in Asia, made him prominent, and he long took a leading part in the foreign affairs of Russia. Died Jan. 26, 1895.

Degrees', College. Originally the degree was simply a certificate that the person holding it was qualified as a teacher of college classes. The mediæval universities had the four faculties of arts, law, medicine and theology, and each of these faculties issued its own special degrees. Those were the baccalaureate, the licentiate and the doctorate—the first, however, not conferring the privilege of public teaching. Each degree required an examination in certain prescribed subjects, and a fixed term of university study. The earliest degree known was that of master, which seems to have been followed by that of doctor, at the University of Bologna, in the 12th century. In England the degree of doctor was first given about 1207. In time the term master became confined to the teacher in the university faculty of arts, while that of doctor was employed in the other three faculties. In Paris, at the close of the 15th century, the terms of study requisite to obtain a teacher's degree in the four faculties were: in arts, four years; in law, seven; in medicine, eight; and in theology, fourteen. In modern universities and colleges the meaning of degrees has differed. A degree in arts now signifies simply a certain measure of proficiency in the subject taught; but in the case of law, medicine, and theology, which are considered the higher faculties, the degree of doctor permits its holder to engage in these respective professions. A four years' course of collegiate study is now usually sufficient to obtain the degree of bachelor while that of master requires a further period of graduate study. In German universities the degree of doctor regarded as the highest distinction, is the only one given, except in theological colleges, which confer that of licentiate also. Of late years certain universities have been founded which do not demand a full course of university study, but confer degrees upon persons who pass examinations in certain prescribed subjects. A further departure from the old system is in the conferring of what are called "honorary" degrees. These are given to persons who have distinguished themselves in sphere of life connected with the line of study for which the degree exists. Thus, the degree of Doctor of Laws has been conferred on eminent scholars, soldiers and even merchants, who have also achieved eminence in the lines of work properly contemplated by the degree LL.D. Degrees have even been obtained, in not a few instances, by purchase, or on such easy condition that their significance is quite lost. The Pope has long held the privilege of conferring degrees upon whom he pleases, but in Protestant countries the right of conferring degrees can be granted only by the State. At the present time the range of degrees granted is greatly extended over that of the past. The degree of Doctor, given in dentistry, civil-engineering, and other special branches of study, while outside of professional course the degree of Doctor of Philosophy ranks as the highest distinction. A person may now become bachelor, master or doctor of music, science, or almost any special branch of study. This is particularly the case in the U. S. Germany the right of conferring degrees is restricted to 21 universities, and in Great Britain to a much smaller number, while in the U. S. there are not less than 30 colleges and universities which exercise this function.

De Haas (*hâz*), MAURICE FREDERICK HENDRICK, artist, born in Rotterdam, Holland, in 1832. Studied with Lou Myer and other eminent artists. His specialty was marine painting, in which he became distinguished receiving in 1871 the appointment of artist to the Dutch Navy. In 1857 he came to the U. S., settling in New York. His pictures are noted for their truth to nature. *Ferragut Passing the Forts* is one of his best work. Died in New York, Nov. 23, 1895.

Dehydrate, *v. a.* To deprive of water. —*v. n.* To lose water; to dry up.

De Ko'ven, REGINALD, musician, born in Middletown, Conn., April 3, 1859. Educated at Oxford University. He studied music in Stuttgart. The degree of Music Doctor was conferred upon him by Racine College, 1890. He is the author of several popular operas and numerous songs, which include *Bon Quixote*; *T. Fencing Master*; *Robin Hood*, &c. Has also written musical criticisms for various newspapers.

Delaborde', HENRI, Vicomte, historical painter, born at Rennes, May 2, 1811. Studied with Paul Delaroc. At the Salon of 1847 he was awarded the first-class medal; was made member of the Institute in 1868 a officer of the Legion of honor in 1870. His *Knights St. John of Jerusalem* is in the Versailles Museum. T. Museum at Dijon owns his *Hugor in the Desert*, and Amiens Cathedral is the *Passion of Christ*.

Delacroix (*deh-la-kroä*), FERDINAND VICTOR EUGÈNE, painter, born near Paris, April 26, 1799; pupil of Guér. He was chief of the Romantic School of 1830. The first of his works to attract the public was his picture of *Dante and Virgil in Charon's Bark*. He is noted as a colorist and his influence upon the art of his time was great, especially has he affected the modern French school.

The *Entry to Constantinople* is in the Louvre Gallery, and his *Battle of Taillebourg* in the Versailles Museum. Died in Paris, Aug. 13, 1863.

Delago's Bay (*Geog.*) A deep ocean inlet in south-eastern Africa, about 26° S. Lat., 63° E. Lon. It has a depth of 55 miles and is 25 miles in width, offers safe anchorage, but is surrounded by an insalubrious country. Vasco de Gama discovered it in 1498, and the Portuguese soon after founded on its shores the factory of Lourenço Marques. But Portugal neglected to exercise any jurisdiction over the country, and it was claimed for Great Britain in 1822, by Capt. Owen, who entered the bay and hoisted the British flag. On his return in 1823, he found the Portuguese in possession. Little further attention was given to the locality until 1868, when the Boers of the Transvaal Republic annexed the country surrounding the bay. This called forth a protest from Portugal, and an international question arose which was finally submitted for arbitration to the President of France, who, in 1875, gave his decision in favor of Portugal. A railway was subsequently started by a British construction company, but was confiscated by the Portuguese government. By 1895 it was extended to Pretoria, 350 miles distant. Great Britain sent a fleet thither in 1897, raising apprehensions of a revival of her claim to ownership. *D. B.* is a harbor nowhere equaled in Africa south of the equator. It is almost landlocked and sheltered from all but infrequent easterly gales. Three navigable rivers flow into it, while it has anchorage for an enormous fleet. But the Portuguese are so apathetic that many of the merchants of Pretoria and Johannesburg prefer to employ the longer and costlier railway routes to Natal and Capetown. An active power in possession of this bay would dominate the coast for a long distance and hold the key to the trade of the gold and diamond mining districts and that of the Transvaal.

Delaine', n. [An abbreviated form of *Fr. mousseline de laine*.] A dress fabric, originally of wool, but now made of wool and cotton, without twill.

Deland', MARGARETTA WADE (CAMPBELL), poet and novelist, born at Allegheny, Pa., Feb. 23, 1857. She was educated at New Rochelle, New York. Began her career as a teacher of drawing in New York City. In 1880 she married L. F. D., of Boston, where she now resides. She is best known by her theological novel of *John Ward, Preacher*, which was very widely read. The next in popularity was *Sidney*. She has also published *Mr. Tommy Dore*, and *other Stories*.

Deland', in Florida, a thriving town, cap. of Volusia Co.; on J. T. & K. W. R.R., near St. John's river, 75 m. S. of Palatka; seat of the John B. Stetson University, founded by the eminent Philadelphia philanthropist of that name; in the center of a rich fruit-growing region, and a famous health resort. *Pop.* (1897) about 1,300.

la Rame, LOUISA, known in the literary world as *LIDA*, born at Bury St. Edmunds in 1840. Lived for a while in London, but since 1874 has spent most of her time in Florence. Her earliest contributions to literature were published in *Colburn's New Monthly and Bentley's Magazine*. She is a prolific and popular writer, having published more than twenty books, the principal of which are: *Under Two Flags*; *In a Winter City*; *Southmore*; *Idalia*; *Pascarel*; *Two Little Wooden Shoes*, and *Moths*.

Delaroche, HIPPOLYTE (called PAUL), historical painter, born in Paris, July 17, 1797. He was the head of the modern eclectic school of art in France. Studied under Baron Gros. Was awarded the grand gold medal of the Salon of 1824. He was made member of the Institute in 1832; the following year professor of painting at the *École des Beaux-Arts*, and in 1834 an officer of the Legion of Honor. The famous *Hemicycle*, in the Louvre, is the work of his brush and occupied him from 1841. One of his best known works is the *Floating City*; others which were at once accepted by the public additions to famous paintings are: *The Princes in the Tower* and *Death of Queen Elizabeth*, now in the Louvre; *Arlemagne Crossing the Alps*, in the Versailles Museum. Died in Paris, Nov. 4, 1856.

la Rue, WARREN, Ph.D., F.R.S., English physicist and inventor, born on the island of Guernsey, Jan. 18, 1835. Educated in Paris and afterward followed his father's business, the manufacture of paper wares, for which he invented new processes and machines. He was a member of the International Electrical Congress at Paris in 1861; held presidency of the Royal Astronomical Society, and other posts of honor. The reports published by him of original observations in chemistry, astronomy and physics are considered of the highest value. Died April 19, 1889.

du Ray, CHARLES EUGÈNE, F.R.S.L., mathematician and astronomer, born near Troyes, France, April 9, 1814. Graduated from the Polytechnic School in 1836 with the highest honors. Was appointed professor of mechanics in the Polytechnic School and in the Faculty of Sciences. He received honors and distinctions, both at home and from abroad; was an officer of the Legion of Honor, a member of the Institute, a member of the Bureau of Longitude, and director of the Parisian Observatory. His books include *Théorie de la lune*, and *Rapport sur le Progrès de l'Astronomie*. He was drowned at Cherbourg, Aug. 5, 1872.

du Ray, JULES ELIE, figure and portrait painter, born at Nantes, France, June 12, 1828. Studied with Frémin. In 1856 he was awarded the Grand Prix de Rome. Received the first class medal at the Paris Exposition of 1875, and at that of 1889 the medal of honor. He was made officer of the Legion of Honor and a member of the Institute. His portraits are considered masterpieces, the drawing and composition of his work ranking among the best. His *Diana* is in the Luxem-

bourg Gallery, Paris, and the *Death of the Centaur, Nessus*, in the museum at Nantes. Died in Paris, Sept. 5, 1891.

Delaware Indians. (*Anthrop.*) A tribe of American Indians, of Algonquin descent, who, on the settlement of Pennsylvania, were found occupying the region adjoining Delaware bay and river. They called themselves the Lenni-Lenape, and claimed to be the source of all the Algonquin tribes, which the other tribes acknowledged by calling them "grandfathers." Originally powerful, they seem to have been subdued by the Iroquois, and forced to lay down their arms and assume the position of mediators between the warlike tribes. Their relations with the Quaker settlers were of the friendliest character, but at a later date they were fraudulently treated and many of them joined the French in their war with the English, taking part in Braddock's defeat and in the later Pontiac's conspiracy. The pressure upon them drove them westward until by 1768 they had all migrated beyond the Alleghenies. Here in 1774 they joined the Shawnees and other tribes, under the celebrated chief Logan, in a war of reprisal on the settlers. In 1778 they signed a treaty with the government, the first treaty made between the U. S. and an Indian tribe. Part of the tribe had embraced Christianity; and these, though quiet and unresisting, were subjected to many outrages, and, in 1781, were attacked and many of them brutally massacred. In despair they withdrew to Canada, where their descendants still remain. The warlike Delawares took part in all the Indian wars of the remainder of the century, but in the war of 1812 they were friendly to the U. S. In 1829 they were removed to a reservation in Kansas, which was to be their permanent home. Yet in time they found themselves so crowded and maltreated by settlers that they sold their reservation to the U. S. and in 1868 removed to the Indian Territory, where they accepted lands in severalty and became citizens of the U. S. They now (1897) number about 1,000 souls.

Delbruck, MARTIN FRIEDRICH RUDOLPH, LL.D., a German statesman, was born at Berlin, April 16, 1817. He studied at the Universities of Bonn, Göttingen, and Berlin; read law, and practiced for a short time at Halle, when he entered the civil service. He was made assistant in the ministry of finances, and afterwards in that of commerce. To the study of economic questions, he gave special attention, and in 1859 was made director of the division of commerce and industry. The commercial separation of Prussia and Austria, and the commercial treaties of the smaller German states with Prussia, were largely due to him. He was made president of the federal Chancery in 1897, and used the influence given him by this position to promote the advancement and transformation of the Prussian monarchy. His reputation subsequently declined, the charge of too freely using the French war contribution in industrial enterprises (which had proved unfortunate) being brought against him. He resigned the presidency of the Chancery in 1876. He was elected afterwards to the Reichstag and combated vigorously Bismarck's protectionist ideas; also opposed the Elbe navigation act.

Deleb or Delaeb Palm. (*Bot.*) *Borassus Ethioptum*, also called as the ETHIOPIAN FAN PALM; a common and widely distributed tree of Central Africa, where, in the domestic economy of many negro tribes, it often replaces in great measure the date palm. It produces a large, hard nut, which is eaten both in the fresh state and after it has been planted and begun to germinate. In the latter case the young embryo, sweetened by germination, is eaten either raw or cooked.

Del'egate, Walk'ing. A member of a trades-union who visits other organizations of a similar character for the purpose of inducing united action for the accomplishment of a common purpose.

Delft'ware, n. See CERAMICS.

Delibes (*deli-leb'*), CLEMENT PHILLIBERT LEO, operacomposer, born at Saint-Germain-du-Val, France, Feb. 21, 1836. Studied at the Paris Conservatory. At the beginning of his career he was accompanist at the *Théâtre Lyrique* and subsequently at the *Grand Opéra*; was also second chorus-master under Massé. He was a member of the Institute and a chevalier of the Legion of Honor. The best of his operas was *Lakmé*, produced in Paris in 1883. Others were *Sylvia*; *Jean de Nivelle*, &c. He was appointed Professor of Composition in the Conservatory. Died Jan. 16, 1891.

Delitzsch (*dä'-lich*), FRANZ, theologian, born in Leipzig, Feb. 23, 1813. Studied at the University of Leipzig. He wrote commentaries on Genesis, Isaiah, Psalms, Proverbs, Job, Song of Songs, and Hebrews; also, translated the New Testament into Hebrew. He held a foremost place as an exegetist. His theological and devotional works were numerous, among which are *History of Jewish Poetry*; *Biblico-Prophetic Theology*; *Christian Apologetics*, &c. Died in Leipzig, March 4, 1890.

Delius (*dä'-li-us*), NICKLAUS, a philologist, born in Bremen, Sept. 19, 1813; educated at the Universities of Bonn and Berlin, devoting himself to the study of languages. In 1846 he removed from Bremen to Bonn, and was made professor extraordinary in 1855, subsequently becoming full professor. He gave some time to lecturing on Sanskrit, but afterward devoted more attention to Romance literature, and made a special study of the works of Shakespeare. His first work upon this subject was *Macbeth*, which was followed by others, treating of Shakespeare's text, his critics, and the English stage in his time. He contributed numerous articles to the press on the subject of early France, and on the subject in which he acquired fame, that of Shakespeare. He published an edition of *Provençalischen*

Liedern, and a treatise on the *Sardinian Dialect of the 13th Century*. Died in 1888.

Del'la-Crus'ean, n. A member of the Florentine *Accademia della Crusca* (Academy of Chaff), which was founded in 1582 for the avowed purpose of purifying the Italian language and literature.—One of the imitators of the school of poets originating in this academy, whose sentimentalities were at one time largely copied by the English.

—*a.* Relating to or resembling the *Accademia della Crusca* or the principles there advanced.

Delmar', ALEXANDER, political economist, born in New York city, Aug. 9, 1836; educated in Spain. After his return to the U. S. he wrote for the New York press, chiefly on financial subjects. He was organizer and director of the U. S. Bureau of Statistics, and from 1864 to 1866 editor of the *Social Science Review*. He is the author of *Essays on Political Economy*; *International Abnanc*; *What is Free Trade?* &c.

De Long', GEORGE WASHINGTON, lieutenant-commander of the U. S. Navy, born in New York, Aug. 22, 1844. He graduated from the U. S. Naval Academy in 1865, and served in the *Junia* on her trip to Greenland in search of the *Polaris*. James Gordon Bennett, proprietor of the New York *Herald*, subsequently purchased a vessel for a polar expedition which, by special act of Congress, was named the *Jeannette*, and was allowed to sail under American colors with all the rights of a government vessel. On July 8, 1879, the *Jeannette* sailed from San Francisco and made her way through Bering Strait to the seas north of Siberia. On June 13, 1881, she was crushed by the ice and sank, and De Long, with a number of the party, perished on the banks of the delta of the Lena in Siberia, in October, 1881.

Del'pit, ALBERT, French author, born in New Orleans, La., Jan. 30, 1849. Educated at the College of St. Barthe and at the Lycée of Bordeaux. He received the Cross of the Legion of Honor for distinguished services in the war with Prussia. He was awarded several prizes for his writings, one for an *Eloge de Lamartine*. A poem, *Le Repentir, ou Récit d'un curé de campagne*, and his first volume of verse won Montyon prizes, and in 1880 he received from the Academy the award of the Vitet prize. His novels were numerous and include: *La Vengeance*; *Jean Nu-Pieds*; *Les Fils de joie*, &c. Died in Paris, Jan. 4, 1893.

Del Rio, in Texas, a town, the cap. of Val Verde co., on the Southern Pacific R. R., 72 m. N. E. of Eagle Pass. *Pop.* (1897) about 2,400.

Delsarte', FRANÇOIS ALEXANDRE NICHOLAS CHÉRI, born at Solesmes, France, Dec. 17, 1811. He was the son of a physician, but in early life was left an orphan and was forced to gain his living as a rag-picker. When but twelve years of age he devised an original system of musical notation, which attracted the attention of Biamini, a musician, who adopted the boy and gave him a musical education. His voice failing under the training of the Conservatoire, he abandoned singing and became a teacher and investigator. For years he sought to discover a natural and scientific basis for musical and dramatic expression, and won such fame that leading exponents of oratory and music sought his institution. The medal of arts and sciences and the cross of a chevalier of the Guelph order were conferred on him by the King of Hanover. The results of his studies were not published, only charts and fragmentary writings remaining in evidence of his philosophical system. Died in Paris, July 19, 1871.

Delsarte' System. The system developed by François Delsarte, now looked upon as the basis of the highest art-criticism and culture, has no records to indicate its full character, being largely traditional. Delsarte based it on the dogma: "There is in the world a universal formula, namely, the trinity, that may be applied to all the sciences and to all things possible." This trinity, as applied to man, includes sensation, mind and soul; or a vital, mental and emotional nature; each distinct in itself, yet indissolubly united to the other two. Of this trine nature, the vital portion is expressed by tones, the mental by words, the emotional by gestures. Again, in the body the limbs are the agents of the vital nature, the head of the mental, the trunk of the emotional; and each of these, again, has three subdivisions in accordance with the trinity hypothesis; in the trunk the abdominal region being vital, the lung mental, and the heart emotional in expression. This theory is applied to the bodily motions, of which, in Delsarte's idea, all those from the body are vital, those toward the body mental, and those centered around the body emotional. Delsarte carried his principles into a philosophical system of expression, illustrating his concepts by a series of facial and pantomimic movements. The Delsarte system has become popular in the U. S., and has been made practicable by its application to the development of health. Three series of movements are employed; one consisting of relaxing motions for removing nerve strain and conserving the vital energies; a second of movements for directing and increasing the nerve energy; and a third—of an æsthetic character—for harmonizing the threefold powers of man. Health, harmonious development, and natural expression are held to be resultants of these exercises.

Del'ta Metal. (*Metall.*) A brass, or alloy of copper and zinc, to which manganese has been added. Ferromanganese is employed for this purpose, and a little silicon—usually present in the ferro-manganese—is added. The use of this substance adds iron to the compound, but this needs to be small in quantity. The properties of *D. M.* are similar to those of phosphor-bronze, the silicon and manganese modifying the properties of copper in the same way as phosphorus

does in phosphor-bronze. *D. M.* is used for parts of machinery and for ornamental work.

Delundung, *n.* (Zool.) The *Prionodon gracilis*, a carnivorous animal inhabiting the forests of Java, referred to the family *Viverridæ*, but regarded as a con-

Fig. 2813.—DELUNDUNG.

necting link between that family and *Felidæ*. It is of slender form, with a long cylindrical tail, and is prettily streaked and spotted.

Demagnetization of Watches. (*Elec.*) The electric dynamo, useful as it is in so many directions, has developed one unpleasant feature—the tendency to magnetize the steel parts of watches in case of too close approach to the machine, which appears to be surrounded by an intense magnetic field. The results are disastrous to the performance of its duty by the time-piece. Happily it can be overcome without difficulty. Various methods of *D. of W.* have been proposed, of which the following is effective: The watch, held by its chain, is slowly lowered to the bottom of a conical coil of wire, and as slowly withdrawn. This coil, wound with a single turn at top and gradually increasing in number of turns to the bottom, is connected with a source of rapidly alternating currents. The watch, as it descends into the coil, becomes more and more powerfully magnetized with alternately opposite polarities. This removes all previous polarity, and as it is slowly lifted from the coil the magnetism decreases. If it be raised high above the apex of the coil before removal, all sensible traces of magnetism will disappear.

De Mille, JAMES, Canadian author, born at St. John, N. B., in Aug., 1837. He graduated from Brown University, R. I., and was appointed professor of Classics at Acadia College, and subsequently of History and Rhetoric at Dalhousie College. He was the author of *Helene's Household*; *The Soldier and the Spy*; *The American Baron*; *An Open Question*, &c. Died at Halifax, N. S., in 1880.

Dem'ing, in *New Mexico*, a post-town of Grant co., on the A. T. & S. F. and So. Pacific R. Rs., 90 m. W. of El Paso, Texas; an important shipping point for a rich mining and fruit region. Pop. (1897) about 1,500.

Democratic Party. (*Amer. Pol.*) One of the two leading political parties of the U. S. It is interesting to note that it is the only one that has existed since the origin of the government, and that it was originally known under the name of its present great rival, the Republican Party. The first political parties in this country were the Federal and Anti-Federal, but the latter vanished in 1788, after the adoption of the Constitution by the requisite number of States. For the first three years after the inauguration of the new government all the public men of the U. S. were nominally Federalists, including Jefferson, Madison, Burr, and other later Republicans, and the idea prevailed that there would thereafter be but one party in the country. Yet the Anti-Federal opposition was not quite dead; opposition was manifested to the centralizing policy of the new government, fears being entertained that the country would be ruled by an aristocracy if it did not eventually become a monarchy. Of this opposition Jefferson, who had witnessed the opening scenes of the revolution in France, was the leading spirit, and in a letter to Washington in 1792 he first spoke of the adherents of his views as Republicans "who wished to preserve the government in its present form." The party thus named was then a very small one. The leaders were Jefferson, Madison, Randolph, and a few of lesser renown, while its principles were ill defined. Shortly afterward a new feeling of opposition to the government arose, springing out of a wide-spread sympathy with the revolutionists of France. What were called "Democratic clubs" sprang up all over the country, their membership composed of French sympathizers, their demand being for universal suffrage; while in their meetings political discussion first made its way down to the masses of the people. About 1795 a coalescence took place between these two opposition factions, largely as an effect of the "Whisky Insurrection" of 1794 and Jay's treaty with England of 1795, the latter being bitterly opposed by the masses of the people, though supported by the government. The name "Republican" was alone used by the members of the party, that of "Democrat" being applied by their opponents as a term of contempt. The new party, however, gradually became known by the people at large as the "Democratic-Republican" and as such is most generally

spoken of in history. The original party was little more than a Virginian faction. Its union with the Democratic club members gave it a national standing, and it grew so rapidly in strength that in the 1796 election Jefferson received 68 electoral votes to 71 for Adams, and became vice-president. The alien and sedition laws of the Adams administration completed the transformation of the governmental policy, giving a vigorous development to the doctrine of State sovereignty, and calling forth express declarations to that effect from the legislatures of Virginia and Kentucky, the latter, prepared by Jefferson, asserting the right of nullification (by a State) of laws affecting its sovereign rights. These resolutions were not supported by the other States, but the strength of the Democracy grew, and in the election of 1800 Jefferson and Burr each received 73 votes to 65 for Adams. With this election the supremacy of the Federal Party vanished. Its two great opponents, Jefferson and Madison, remained at the head of the government for the succeeding 16 years, and by 1816 the Federal Party had so weakened as to be able to offer but a shadow of opposition to Monroe. In the succeeding four years it vanished as a party, and Monroe entered his second administration by a practically unanimous vote, the country again having but one party, the Democratic-Republican.—*New Policies.* But though there was only one party, there was more than one policy. A second U. S. Bank was established in 1816. In the same year a slightly protective tariff on woolen and cotton goods was enacted. Gradually the tariff was increased until in 1828 the average rates of duty reached nearly 50 per cent. About 1822 the policy of public improvements became prominent, and rivers and harbors began to be improved, roads and canals built, at government expense. All this was an abandonment of the Jeffersonian policy, and naturally made discord in the councils of the party. In 1824 there was still but one party, though several candidates, but by 1828 the discord had grown into a party division. Those who favored a high tariff and a national bank assumed the title of National Republicans, from the fact that they favored the increase of the powers of the national government, while their opponents, long known as Democratic-Republicans, dropped the latter portion of their name, and were thenceforth known only as Democrats. They denied the constitutional right of the government to build roads or canals, to impose a tariff for any other purpose than that of obtaining revenue, or to charter a national bank. The first presidential contest on these party questions took place in 1828, and was won by the *D. P.*, Jackson receiving 178 electoral votes to 83 for Adams, his opponent.—*Rotation in Office.* It had been a theory with Jefferson that there should be a popular control of all officials by frequent elections, and by removal of officials under the government when the people, by changing their President, showed a desire for a change. This theory was not put into effect by Jefferson, and it remained for Jackson to carry it out to its ultimate. Jefferson, in his eight years, had removed 39 office holders. Jackson, in 1829, turned not less than 2,000 men out of office and filled their places with his own adherents. It will suffice to say concerning this system of removal that it has never become specially a party principle, and that Civil Service reform, or a return to the old system of removal only for cause has in late years been carried out by Presidents of both ruling parties. Jackson also refused a new charter to the U. S. Bank, but more through personal than political hostility. His veto of the Maysville Road Bill in 1830 ended the national improvement system, even though he felt himself compelled, afterward, to sign several such bills. But, though opposed to the principle of a protective tariff, the claim of a right in a State to nullify a national law was further than Jackson was ready to go, and he promptly and decidedly put an end to the effort of South Carolina to nullify the national tariff in 1832. A tariff with lower duties was, however, passed.—*The Whig Party.* In 1834 the National Republicans assumed the name of Whigs, but the Democrats retained the control of the government until 1840, when the Whigs nominated and elected Harrison by the great electoral vote of 234 to Van Buren's 60. For 40 years, from 1800 to 1840, the Democrats had been in power. Nor was their lapse from power long. Harrison died in a month after his inauguration, and Tyler, the vice-president, succeeded him, and brought back a virtually Democratic administration, he proving as strongly opposed to high tariff, internal improvements, and a national bank as Jackson himself.—*Slavery Extension.* In the succeeding years new questions arose, which for the time set aside special attention to the fundamental party distinctions. The controversy over slavery extension, set aside in 1820 by the Missouri Compromise law, was reopened and this, with the new doctrine of abolitionism, occupied public attention almost exclusively. Democracy was strong in the South and became the political dogma of the pro-slavery advocates, while the activity of the small anti-slavery party in the North aroused a strong pro-slavery feeling there. The result was the election of Polk, the Democratic candidate. An outcome of this was the Mexican War, the acquisition of a great new section of territory, and the development of a vigorous slavery extension advocacy. In 1848 several parties were in the field. The Democrats nominated Lewis Cass; the Whigs, Zachary Taylor; the new Free Soil (anti-slavery and abolitionist party), Martin Van Buren. The Whigs had far the most popular candidate. Taylor was the people's hero of the Mexican War, and was elected by a majority of 36 electoral votes. Again they were unfortunate in their choice. Taylor died in a little over a year, and Fill-

more, the vice-president, took his place. Meanwhile the country was disturbed by the slavery political contest, the Whig party weakened and split into two sections, and in 1852 went practically to pieces; Pierce, the Democratic candidate, receiving the electoral votes of all but four states. Once more the *D. P.* had gained the high distinction of being the only national party. It maintained its organization intact, while the Whigs had practically disappeared, and had almost no membership in the South. The Free Soil party was sectional, not national. Yet this state of disorganization was no of long continuance, the various elements of opposition to the pro-slavery principle then maintained by the Democracy gradually fused together, and in the election year of 1856 a new party appeared, the Republican, its title that which the party of Jefferson had for more than twenty years maintained. In the election that ensued the new party developed unexpected strength, Fremont its candidate, receiving 114 votes to 174 for Buchanan, his Democratic opponent. Only one question was now prominent in men's minds and in party councils. The shadow of the great coming contest was cast backward over the land; pro-slavery and anti-slavery were the rallying cries of the great parties. But the pro-slavery sentiment in the North was not decided enough to please the South; the *D. P.* was divided into Northern and Southern sections, each nominating its candidate, and in the 1860 election Lincoln, the Republican candidate, carried the field against all his opponents, receiving 18 electoral votes, while Breckenridge, the Southern Democrat, received 72; Douglas, the Northern Democrat, 11; and Bell, the candidate of a remnant of Southern Whigs and Northern Know-Nothings, received 39.—*After the War.* From 1860 to 1884 the *D. P.* remained party without a president, the Republicans continuing in the ascendancy. After the war the slavery question, which had so long held a dominating influence over American politics, gradually disappeared. State-right also, which had been one of the leading principles fought for in the war, lost its standing, the result of the war having clearly settled the long-debated question of State sovereignty. Slowly then the *D. P.* settled back into its main fundamental dogma, that of tariff for revenue only, all the other questions which had arisen from time to time having vanished or sunk for the time into the background. For many years, therefore, after the period of reconstruction excitement, practical only one question remained in American politics, that of free trade or revenue tariff, as advocated by the *D. P.* versus protective tariff, as advocated by the Republicans. It cannot fairly be said that the Republican party was invariably successful in the elections from 1860 to 1880. The result of the election of 1876 need to be decided by an electoral commission, and though the decision was given in favor of the Republican candidate, it was looked upon by the Democrats generally as unjust, they maintaining that their candidate had been elected and had been deprived of his rights. This is a question which cannot easily be settled to general satisfaction and must remain a matter of controversy. Since 1880 the struggle for supremacy has been nearly even between the two great dominating parties, as shown by the election of Garfield (Rep.) 1880; Cleveland (Dem.) in 1884; Harrison (Rep.) 1888; Cleveland (Dem.) in 1892; and McKinley (Rep.) in 1896, the intervening "off-year" elections of Congressmen showing an equivalent variation in popular sentiment. Up to 1896 the tariff question was the dominant issue; but in that year the national quadrantal battle was fought out on monetary and financial lines. A period of commercial and industrial depression, dating from 1893, had revived controversial discussion as to the demonetization of silver in 1896, which act, it was maintained, had brought wealth to the money power and poverty to the masses, encouraged (with the help of the tariff) the formation of trusts, led to an undue concentration of wealth in the hands of the few. This position, long held by the Populists, was assumed by the *D. P.* at their Chicago convention where William J. Bryan was nominated for the presidency on a platform demanding the unlimited coinage of silver and gold at a ratio of 16 to 1, with the usual party declarations respecting the tariff, and certain other "planks" which were construed to be counter attacks upon the Supreme Court and the Federal judiciary in general, the power of the U. S. government. This action resulted in a split in the party, a second Democratic ticket being nominated at a convention held later at Indianapolis, in which the remonetization of silver was condemned and the Chicago platform declared to be contrary to genuine Democratic principles. That the Chicago declarations were the more popular with the masses of Democracy is shown by the fact that the Bryan ticket received over 6,500,000 votes, while that of the Indianapolis convention, headed by John M. Palmer, received only 132,056. Many Democrats, however, fearing the remonetization of silver more than the protective tariff, voted the Republican ticket, while the Populist and National Silver parties joined the regular Democracy.—The future of the *D. P.* is at this writing involved in much doubt. Many of its old leaders and most of its influential journals are irrevocably committed to the maintenance of a single standard of money, while an immense majority of the rank and file seems equally devoted to a return to bimetalism. The action of the Republicans, however, in practically ignoring the monetary question while insisting upon the enactment of a higher protective tariff, regardless of the feelings of their recent allies, the so-called "sound money" Democrats, renders highly probable that the battles of 1898 and 1900 will

show a complete readjustment of political alignments and combinations, the exact nature of which cannot now be foreseen.

Demogeot (*deh-mō-zhe-ō*), JACQUES CLAUDE, author, born in Paris, July 5, 1808; studied at the University of Paris and taught in the colleges of Beauvais, Rennes, Bordeaux, and Lyons. He subsequently became professor of rhetoric at the Lycée Saint-Louis in Paris. He was the author of an essay on *Les Lettres et les Hommes de Lettres au XIX^e Siècle*, which was crowned by the Society of Authors. His *Histoire de la Littérature Française* has reached its nineteenth edition, and has been translated into English. D. has prepared good text-books on French literature, and has contributed to the *Revue des Deux Mondes* and other periodicals.

Demonetization, *n.* (*Fin.*) Act of demonetizing, or depriving of monetary character or power; literally, "the taking money out of" (silver, gold, paper, &c.), implying that the substance or object demonetized had been previously endowed with monetary attributes, presumably by a power identical with or equivalent to the power which demonetizes. A universally satisfactory definition is rendered difficult by the various meanings ascribed to the term "money," and the resulting differences of opinion as to the extent to which monetization may be effected by law. (See MONEY.)—*D. of Silver.* Prior to 1871 the only countries that maintained the single gold standard of currency were as follows: Great Britain and her colonies (officially since 1816, but practically since 1774), Portugal, Turkey, Persia, Brazil, and the Argentine Republic. The single silver standard was in vogue in Germany, Holland, Austria, Russia, the Scandinavian countries, Egypt, India, China, Japan, Mexico, Central America, Peru, Ecuador, and Bolivia. In all other countries the double standard (silver and gold) was legally maintained, although the metals were not concurrently circulating in all. In 1871 the German Reichstag passed a law providing for the establishment of the gold standard, which went into full effect in 1873. This was speedily followed by a similar action by the Scandinavian countries, and by the U. S. in 1873, at which time neither gold nor silver was circulating in this country, and the bullion price showed that, at our legal ratio of 16:1, our silver dollar was worth, as metal, at least 2½¢ more than the gold dollar. (See Bimetallism.) The Latin Union (*q. v.*) suspended silver coinage in 1876, and Holland did the same. In 1879 the Austrian mints were closed to silver, and 13 years later that nation took active steps to establish the single gold standard. About the same time Roumania took similar action; and in 1893 the mints of British India were closed to silver, as a first step in the direction of establishing the single gold standard of the Empire. Santo Domingo, Russia and Japan are among the latest important nations to renounce the use of silver as standard money, the two last named being now (1897) upon an actual paper basis.—It should be clearly understood that, in economic usage, *D.* does not mean the disuse of a substance—as silver—in the currency, but its disuse as standard money, or "money of final redemption." All gold standard countries employ silver in their subsidiary coinage, and some of them circulate it as a full legal tender. *D.* occurs when a metal is no longer recognized as a so-called "standard of value," and is denied unlimited coinage as such.

Demote, *v. a.* To reduce in rank or class; opposed to promote. (A word of late coinage and local use in the U. S., but of seeming usefulness and not devoid of etymological warrant.)

Demotic, *a.* [*Gr.* *dēmos*, people.] Of or pertaining to the people, or the masses.

Dendrodus, *n.* (*Pal.*) A genus of extinct fishes, whose fossil teeth occur in the old red sandstone beds of Scotland, in the neighborhood of Elgin. On transverse section these teeth exhibit under the microscope a beautiful and singularly complex structure, due chiefly to the presence of radiating lines, which, proceeding from the center, branch out and enclose leaf-like bundles of dentinal tubes. This labyrinthic or dentritic character suggested the generic name employed by Prof. Owen.

Fig. 2814.
TRANSVERSE SECTION OF THE
TOOTH OF DENDRODUS.

Denis (*deh-nē*), JEAN FERDINAND, author, born in Paris, Aug. 13, 1798. He held the office of librarian of the ministry of public instruction. This office he resigned, and accepted that of conservator of the Ste.-Geneviève library, and in 1865 became administrator of the Ste.-Geneviève, and was made an officer of the Legion of Honor. He was the author of numerous articles for the *Nouvelle Biographie Générale* and other cyclopædic works. Some of his best known books are *Chroniques chevaleresques de l'Espagne et du Portugal*; *Scènes de la Nature sous le Tropique*. Died in Paris, Aug. 2, 1890.

Duison, GEORGE TAYLOR, soldier, born in Toronto, Canada, Aug. 31, 1839; educated at Upper Canada College. He was admitted to the bar in 1861, subsequently entered the militia and eventually rose to the

command of the governor-general's bodyguard. He was twice sent on a mission to Great Britain as the representative of Ontario in emigration matters. The prize of 5,000 rubles offered by the Czar of Russia for the best work on the *History of Cavalry* was awarded to D. Among the other works are: *Manual of Outpost Duties*; *Modern Cavalry*, &c.

Denison, in Texas, a flourishing and important town of Grayson co., on M., K. & T. and H. & T. C. R. Rs., 40 m. N. E. of Gainesville. Here are extensive and varied manufacturing establishments; a large shipping trade in cattle, fruit, cotton and other farm products; coal and iron are plentiful near by. Pop. (1897) about 15,000.

Denison University. An institution of learning established at Granville, O., in 1831, under Baptist auspices. Named in 1832 the Granville Literary and Theological Institution, it was renamed in 1845 Granville College, and in 1856 was given its present name. In 1896 it had 21 instructors and 380 students, with a library of 17,000 volumes. Shepardson College, for women, is associated with it.

De no' vo. [*Lat.*] From the beginning; anew.

Den'tiphone, *n.* Same as AUDIPHONE (*q. v.*).

Dent'istry, *n.* The art or profession of the dentist, which is made up of *Dental Surgery* (the treatment of diseases of the teeth) and *Mechanical Dentistry* (the replacing of the teeth when lost). This art, though it has been greatly developed of late years, appears to have been a very ancient one. Artificial teeth made of ivory and wood, some of which were mounted on gold, are said to have been found in Egyptian tombs; and an Etruscan skull, found in 1885, was fitted with a set of animal teeth. Again, the Roman laws of the Twelve Tables spoke of "teeth bound with gold," which it was lawful to burn or bury with the body. During the present century the art of dentistry has wonderfully advanced, particularly within the United States, whose dentists have become celebrated for their proficiency in treatment and skill in mechanical adaptations. The first of American dentists of whom we have any knowledge was John Greenwood, who practiced in New York subsequently to 1788, and had the honor of providing Gen. Washington with a set of artificial teeth. These were carved from ivory and held in place by the aid of spiral springs. During the century and more that has elapsed since Greenwood began practice, the art has enormously developed; many thousands of dentists are engaged in practice, and instruction in *D.* has become a recognized branch of professional education, many schools being established. The first of these was founded in Baltimore in 1839; in 1845 one was started in Cincinnati, and others in Philadelphia in 1856 and 1865. Many others have since been instituted, some of them as branches of University training, while a considerable variety of dental periodicals is published, and a large number of societies of dentists have been organized. In all these respects the U. S. is considerably in advance of Europe, and a high standard of proficiency is demanded in this country for graduation at dental colleges and the right to practice. As regards the making of porcelain teeth, which was once done by the dentist himself, it has for many years been performed by manufacturers, with a great improvement in the merit of the work, while dental implements and materials of every description are similarly produced.—*Operative Dentistry.* The work of the dentist takes two forms: the one being to arrest decay in the teeth and repair its ravages; the other to remove the diseased teeth. These, with the supplying of artificial teeth when the natural ones are lost, constitute the main business of the dentist. The simplest of these operations is that of scaling, or removing the "tartar" from the teeth. Tartar, or salivary calculus, is a deposit from the saliva, of different densities and colors, and frequently found at the necks of the teeth. Unless removed in time it is apt to cause the teeth to loosen and fall out. Its removal is effected by suitably shaped implements, which are inserted under the free edge of the mass of tartar at the gum, lifting it away from its adhesion. Remaining particles are then removed and the surface smoothed with chalk or pumice stone.—*Regulating.* Another important process, in many instances, is that of regulating; the teeth of the second or permanent set often becoming crowded or misplaced. To remedy this defect the displaced tooth or teeth must be pressed into the natural position, and if no room exists one or more of the teeth must be removed. If the dental arch is malformed the trouble may be overcome by regulated and continued pressure, various contrivances being employed for this purpose. The operation of regulating teeth is one that needs considerable time, they only yielding slowly to pressure, while they must be held in the new positions until they have firmly set themselves there. This operation is one that requires much skill and judgment on the part of the dentist, and often results in a marked improvement in the appearance of the mouth.—*Filling.* When the teeth have become affected by decay they can only be preserved by removing the decayed portion and preventing a continuation of the process. This is done by what is known as filling, one of the most usual, and at the same time most important and delicate operations of the dentist. The first step in the process is the removal from the cavity of all decayed and decaying substance, which is done in part by the use of slender excavating steel implements of various shapes, and now, more frequently by the employment of the dental engine, which acts by means of small steel drills and file-headed points, rapidly rotating and cutting away the decaying portion of the tooth substance. If pain is produced by this process, the sensitiveness must be reduced by the use of suitable chemical materials,

and if the nerve cavity be opened the pulp may be removed by the aid of a slender serrated probe, or its vitality destroyed by the use of some caustic preparation, such as arsenious acid, or the opening may be capped with some non-irritant substance, and the pulp left undisturbed. The cavity prepared, it is carefully cleaned by some antiseptic preparation, dried, and filled with one of a number of substances. For temporary fillings gutta percha is serviceable, and oxychloride and oxyphosphate of zinc are also employed. These set quickly, their color resembles that of the tooth, but they lack durability, and are only used when the tooth is not in condition for a permanent filling. For the latter purpose gold or some form of amalgam is usually employed. Amalgam is an alloy of two or more metals, silver and tin being principally used. In a powdered state it is made into a paste by the aid of mercury, and is easily prepared and quickly inserted, being pressed into the cavity till it is completely filled. For front teeth it is unsightly, growing black in color. It is also liable to shrinkage, thus permitting a renewal of the decay. It is, however, very commonly employed, and gives reasonable satisfaction. Of the metals, gold is much preferred, on account of its purity and its resistance to mastication and the action of the mouth fluids. It is usually employed in the form of gold-leaf, which is pressed bit by bit into the tooth, and consolidated there by band pressure with a plugger or light hammering with a mallet. The surface is then smoothed off and burnished. Of other metals, tin foil comes next to gold. It is introduced in the same way, but more quickly, and is much less expensive. In the operation of filling, the fluids of the mouth must be kept from entering the tooth. For

Fig. 2815.—ELECTRIC DENTAL ENGINE.

this a rubber coffer-dam is used, being a sheet of thin rubber, with a small hole, which is slipped over the tooth and grips it so tightly as to exclude all moisture. A siphon tube for carrying off the saliva from the mouth is another very useful appliance. Another method of filling is that known as porcelain-filling. In this a piece of porcelain is shaped so as exactly to fill the cavity, inserted, and cemented in place with thinly mixed phosphate of zinc. In some cases pulverized glass is fused in the tooth. In these cases the color of the tooth can be closely imitated, but the fillings are not as durable as is desirable, the cement being acted on and dissolved by the fluids of the mouth. In case of long-continued decay, or at times from other causes, the pulp may lose its vitality and putrefy, and an abscess form at the root of the tooth. To cure this it is usually necessary to perforate the tooth and permit the putrefactive gases and fluids to escape, after which the dead pulp tissue must be removed and the cavity treated with antiseptics. The dental canal is then filled. The treatment of an abscess is a slow and often very painful process.—*Extraction.* When the removal of a tooth becomes necessary, it is performed by the use of forceps of various shapes, adapted to the different teeth or their positions in the mouth. The tooth is grasped at that portion of the root which first emerges from, or perhaps is just within, the socket, and removed not by direct pulling, but by a lateral or rotary twist which breaks up its adhesions and permits it to be easily lifted from the socket. In old dentistry this operation was performed by an instrument called a turnkey, which forcibly removed the tooth, and sometimes a part of the jaw-bone with it. It is now very customary to avoid the pain of extraction by the use of anesthetics. Ether and chloroform were formerly used for this purpose, but they have been replaced by nitrous oxide, as less dangerous and more evanescent in its effects. Local anesthetics are also employed, to reduce the pain of extraction and also to render filling and other operations less painful. The spray of such volatile liquids as sulphuric ether has been employed to freeze and numb the parts, but cocaine is now generally employed.—*Oral Surgery.* This term applies to the treatment of all lesions, diseases or abnormal growths in the mouth, aside from those affecting the teeth, and such surgical operations as become necessary in the same region. An operation of this character which falls directly within the province of *D.* is the insertion of a human tooth from another mouth in a prepared socket in the jaw. This has been

frequently done, with a large percentage of successful results. In this process the tooth to be inserted has its root canal thoroughly reamed out and filled with gutta-percha, capped with a minute gold plug. It is, before insertion, kept for a time in a sterilizing solution of mercuric bichloride, at suitable temperature. A cavity is prepared for its insertion by making an incision into the soft tissues covering the jaw-bone at the selected point, then drilling into the bone to the necessary depth, reaming the hole to the required size and irrigating it with a sterilizing liquid. The prepared tooth is then inserted and fixed by ligatures to adjoining teeth. After a week or ten days the ligatures are removed and the tooth is found to be firmly fixed. A new bony material grows around it in the socket, retaining it like a natural tooth.—*Mechanical Dentistry.* This consists in the preparation and insertion in the mouth of sets of artificial teeth, which are made of porcelain, and attached to a base plate which covers and closely fits a portion of the dental arch and roof of the mouth. Here they are retained in place by suction, and in some cases by clasps surrounding adjoining teeth. Teeth for this purpose were formerly made by the dentist himself, but are now produced in large factories, of which there are not less than fifty in the United States, and probably half as many abroad. Platinum pins are inserted in the porcelain material before burning and serve as a means of attaching the tooth to the plate. The colors or shades of natural teeth vary considerably, and are imitated by the use of coloring matters in preparing the porcelain, dental factories producing teeth of a great variety of tints.—*Metal Plates.* Of the metals used in making plates for teeth, gold is in much the greatest favor, silver, formerly used considerably, not being liked. In making the plate, an impression of the mouth is first taken, usually with plaster of Paris mixed with water. This sets very quickly and forms an exact mold. A plaster cast is taken from this impression, and from the latter a duplicate in zinc is produced, while a reverse or counter-die of lead is prepared. Between the die and counter-die is laid a piece of gold plate of the requisite shape, which by swaging is made to assume the shape of the zinc die. To the plate thus prepared, the teeth, after being ground to fit, are attached by means of pieces of heavier gold plate, soldered at once to the plate and the platinum pins of the teeth. The plate is then carefully smoothed and polished.—*Vulcanite Plates.* The cost of gold plates places them beyond the reach of the masses of the people, and plates made of hard rubber or vulcanite are much more commonly employed. These only need a plaster impression and model, the rubber plate, after being prepared by suitable manipulation, being vulcanized by subjection to an intense heat for a suitable time. The teeth, which have first been set up on a wax model, which is removed and replaced by warm rubber, become firmly cemented to the hard vulcanized plate. The plate is then trimmed and polished. Plates are also made of celluloid in much the same manner. In these plates the teeth are usually employed in blocks of two or three, while their pins have rivet heads that they may hold firmly in the plate substance.—*Continuous Gum Plates.* The production of what is known as continuous gum work was first performed by Dr. Allen, of New York, in 1848. It consists in the making of a plate of porcelain with a platinum base. The swaging of the platinum into form and the fastening to it of the teeth is done as in other metal work, but the lingual surface of the plate is then covered with a thin layer of porcelain "body" and fired in a furnace. This done, a second coating is put on in the same way, followed by a final layer of pink gum enamel, and a third firing. The cleanliness and beauty of this work has brought it into favor, the tinting of the porcelain to the exact color of the natural gums concealing its artificial character. It is looked upon as the most artistic performance in mechanical dentistry, but its expense, the brittleness of the porcelain, and difficulty of repair stand in the way of its wide introduction.—*Crown and Bridge Work.* Of recent years dentists have devised means of inserting artificial teeth without the aid of a plate, and often with very satisfactory results. The attaching of an artificial crown to a natural root, whose crown had been lost through decay or accident, was practiced in a rude way a century ago, but is now done very skillfully and artistically. For this purpose porcelain crowns are now employed. In these a pivot, or dowel, of tough hickory wood was first employed, the dowel being forced into the hole in the base, which was reamed out to the necessary size. Now a gold or platinum dowel is inserted into the crown when made, a gold or platinum ferrule being placed around the exposed part of the root to prevent its splitting on the forcible insertion of the dowel. In the use of metal dowels a cement of gutta-percha or zinc phosphate is used for their firm retention, and also for the prevention of decay. Bridge work is an extension of crown work, employed for the insertion of several teeth without the use of a plate. In this two teeth or roots at the ends of the space to be covered are necessary as abutments to the bridge structure. These terminal teeth have metal caps fitted to them, or crowns inserted if they are merely roots. In the space between these are placed the necessary number of crowns, of gold or porcelain, resting on and fitted to the toothless base. They are all then firmly united together with gold solder and properly smoothed and polished. This work completed, the bridge is placed in position, the dowel crowns or metal caps having been lined with zinc phosphate that they may become firmly cemented when forced into place. When properly done such a

bridge becomes a permanent part of the masticating apparatus, and this method is looked upon as the most satisfactory and artistic of recent improvements in dental operations. In some cases the intermediate crowns, or "dummies," are alone united, and arranged so as to be fastened to the crowns or caps when in position. A bridge of this character can be readily removed for repair or cleansing—a useful arrangement, since, closely as dummies may fit in place, foreign substances are apt to work their way under them. In some cases a permanent bridge is constructed of porcelain and platinum in a single piece. A platinum bar is extended across the space and fitted to cavities prepared in the pier teeth. Porcelain crowns are then arranged upon it, fixed in place by porcelain "body," and fused in a furnace. Thus prepared, the bridge is fixed in position by insertion of the ends of the bar in the prepared cavities.

Den'ton, WILLIAM, M.A., theologian and author, was born at Newport, Isle of Wight, in 1815; educated at Oxford; vicar of St. Bartholomew's, Cripplegate, London (1850). His theological works are numerous, and he also wrote (1877) *Montenegro: its People and their History*.

Denutrition, *n.* (*Path.*) Wasting away of the tissues of a body because of lack of nourishment, especially when due to absence of power to assimilate alimentary matter.

Deodorizer, *n.* A chemical substance employed to absorb or destroy the odoriferous principles evolved by decomposing organic matter, and belonging to the class of substances known as Antiseptics and Disinfectants. Thus, freshly burned charcoal is a vigorous *D.*, absorbing the fumes of sulphur dioxide, ammonia and other odorous gases.

Deogurh', the largest town of the Santal Pergunnahs, Bengal, Lat. 24° 29' 43" N., Lon. 86° 44' 36" E. It is a place of pilgrimage, and contains great temples of Siva. Its railway station, called Baidyanath or Baijnath, is 4 m. N.W. of the town. *Pop.* (1895) 4,160.

Deotsh', an elevated table-land of Bulti, in Little Tibet, S. of the valley of Iskardo. It is about 30 m. long and 15 m. broad, and is 12,000 feet above the level of the sea. Lat. 34° 30' N., Lon. 75° 20' E.

DePauw' University. (*Educ.*) An institution of learning located at Greencastle, Ind., and founded in 1837 by the Indiana Conference of the Methodist Episcopal Church. Its grounds are 150 acres in extent, on which are erected eight buildings for educational purposes. This institution was known until 1884 as the Indiana Asbury University, and consisted of a college and a preparatory school. In that year it received, through the will of Hon. W. C. DePauw, an endowment of about \$1,000,000. He had also largely contributed to it during his life. In recognition of these benefactions the name of the institution was changed to *D. U.*, and professional schools of theology, law, music, art, &c. were added, widely extending its educational usefulness. The institution has a corps of 34 instructors and its students number about 700.

Depew, CHAUNCEY MITCHELL, LL.D., born at Peekskill, N. Y., April 28, 1834. He graduated from Yale College in 1856, and subsequently received the degree of LL.D. from that institution. Studied law. In public life he has held the positions of Minister to Japan, member of the New York Assembly, and Secretary of the State of New York. He has acquired prominence as a railway manager, and his services as a lawyer have been frequently sought by railway organizations. In 1882 he was elected second vice-president of the New York Central Railroad Company, and president in 1885. He is also president of the West Shore R. R. He has won fame as an orator and extemporaneous speaker, and delivered the oration at the opening exercises of the World's Columbian Exposition at Chicago, Oct. 21, 1892. He is particularly notable in oratory for his rich vein of humor, and may be classed among the most racy and amusing of modern speakers. In 1884 he declined the U. S. Senatorship tendered him by the Republican members of the New York Legislature, and in 1888 was one of the candidates for the Presidential nomination.

De Peys'ter, JOHN WATTS, author, born in New York City, March 9, 1821, descendant of a Huguenot family. He became a merchant and held important offices. Visited Europe, investigating the military systems of the Continent. On the military reorganization of the State of New York, his suggestions were of great value, and he was assigned to the command of the twenty-second district; in 1855, he became adjutant-general, and in 1866 was brevetted major-general. He assisted in organizing the present police force of New York. He has devoted much time to the study of the early history of the Dutch in America, and is noted as a writer on military matters. His publications include: *The Dutch at the North Pole*; *Cavansius*; *Personal and Military History of Gen. Philip Kearney*, &c.

Deprez (*deh-pré*), MARCEL, electrical engineer, born at Aillont-sur-Milloron, Loiret, Dec. 27, 1843; studied at the Lycée, St. Louis. He was noted as a mechanical and electrical inventor, and was made famous by giving the first practical example of the electrical transmission of power to a distance. The experiment was made by means of an ordinary telegraph wire from Mnich to Miesbach, a distance of 35 miles. In 1883, the money was furnished by a syndicate (at the head of which was M. Rothschild) for more extensive experiments, which took place on one of the railway lines of France and proved a great advance on any previously made. *D.* was made chevalier of the Legion of Honor, and subsequently officer; was elected member of the Academy,

and since 1890 has been professor of Electricity at the Conservatoire des Arts et Métiers, and of Physics at the College of France.

Derby, EDWARD HENRY SMITH STANLEY, 15th Earl of, an English statesman, born at Knowsley Park, in Lancashire, July 21, 1826. He was a student of Rugby, and of Trinity College, graduating in 1848 with high classical honors. He was returned to Parliament for Lynn-Regis, and represented that borough for a period of nineteen successive years. After the death of his father, his position in the House of Commons was that of one of the strongest among the modern conservatives. He held a number of cabinet positions, and finally that of Secretary of State for foreign affairs. The difference with his fellow-ministers regarding the occupation of Cyprus was the cause of his retiring from Beaconsfield's cabinet. He afterward became Colonial Secretary under Mr. Gladstone. Died in 1893.

Derby, GEORGE HORATIO, military officer and humorist; born in Dedham, Mass., April 3, 1823; graduated at West Point, in 1864; and was appointed, in 1860, captain of topographical engineers. He served in the war with Mexico and was severely wounded at Cerro Gordo; subsequently employed in various surveys, public works, and explorations, including the charge of the military roads, Department of the Pacific (1854-56), and light-house engineer (1857-59). While stationed in California, he wrote a number of humorous sketches under the name of JOHN PHOENIX. His work of *Phoenixiana* was a collection of these sketches. Died in New York, May 15, 1861.

Derby, ORVILLE ADELBERT, geologist, born at Kelloggville, N. Y., July 23, 1851; studied at Cornell University, and received the degree of M.G. in 1874. He was appointed instructor of geology at Cornell, which position he resigned to join the geological commission of Brazil; he was subsequently appointed curator of the National Museum. He was the organizer of the geographical and geological commission of São Paulo. On the physical geography and geology of Brazil he is the highest living authority, and has been employed in several scientific commissions by that government. He is a fellow of numerous scientific associations, including the London Geological Society, and the papers published by him on the geology, palæontology, &c., of Brazil are exceedingly valuable.

Derby Day. (*Eng. Sports.*) The second day (Wednesday) of the summer races which take place at Epsom in late May, or sometimes early June. On this day which is that on which the best horses run, the famous Derby stakes, instituted by the Earl of Derby in 1780 are the prize of the contest. When the first Derby was run for, there were only 36 subscribers at 50 guineas each. A century later there were 278, and the total value of the stakes exceeded £7,000. Then the members began rapidly to decrease, the conditions being onerous; but new regulations being made in 1888, the entries in 1890 rose again to 238. *D. D.* is a great English holiday, all who can get out of London leaving on that day on their way to Epsom. Not only members of Parliament and people of the higher social ranks, but men and women of every grade in life are borne thither in the most heterogeneous series of vehicles, ranging from the showiest carriage to the humblest van and wagon; while great trains arrive every few minutes at the station, adding their thousands to the crowd, until the entire Downs are covered with a vast mass of moving humanity. At the Derby the course is a mile and a half in length. This was gone over in 1861 in 2 minutes and 43 seconds, the swiftest running up to that time. In 1887 and 1888 the race was run in the same time, notwithstanding that 4 lbs. had been added to the weight. In the original Derby the weights were 8 stone (112 lbs.) for colts and 7 stone 11 lbs. (109 lbs.) for fillies. They have now been raised to 9 stone (126 lbs.) for colts and 8 stone, 9 lbs. (121 lbs.) for fillies.

Dermepen'thesis, *n.* (*Surg.*) The transplanting of tissues from one man or animal to another; tissue grafting.

Deroulede, PAUL, politician, born in Paris, Sept. 2, 1848; studied law. He was active in the political world and chief of the "Patriotic League." When Boulange became Minister of War, in 1884, *D.* became his first supporter and did all in his power to further a vigorous foreign policy. After the condemnation of Boulange he still continued loyal and was always his zealous defender. In Sept., 1889, he was elected a Boulangeist deputy. He is the author of *Chansons d'un Soldat*; *Notre vœux Chansons*; *De l'Education Nationale*; and *Refrain Militaires*.

Descent of Man. Much controversy has existed within late years in regard to the descent of man, and the origin of the human race. Regarding this there are two opposite theories. The older one, which is still very widely held, maintains that man is the product of a special creation, divine in his lineage and an offspring of the Deity, more or less directly. The newer one holds that man has not descended, but has really ascended, through a long series of animal forms, his genealogy extending backward to the first beginning of life. This theory is a part of the general evolutionary hypothesis. It neither affirms nor denies God's agency in man's creation, but sets back the period at which the mode of that creation, if such there were. We may here epitomize the line of descent attributed to man by the late Prof. E. D. Cope, one of the most recent writers on the subject: He traces man's ancestry back, through the successive steps of progress, to the Palæozoic fishes. Beyond this he cannot go, as the origin of these fishes is unknown. In his view, the

immediate ancestor of man was an anthropoid, or man-like ape, kindred to the gorilla, chimpanzee and orang, though a different and earlier member of this family. The second step back is not to the monkeys, or lower apes, but to the lemurs—animals of the Eocene period allied to the monkeys, whose direct descendants still exist in Madagascar. The third step takes us to the false lemurs, a primitive branch of the family of hoofed animals. In the fourth step the hoofed animals are reached, specially the Condylarthra, a hoofed mammal of the earliest Eocene period. The fifth step reaches the Creodonta, clawed placental mammals with carnivorous teeth. In the sixth we reach the Pantotheria, Jurassic forms resembling somewhat the opossums. The seventh step recedes to the Protodonta, Triassic mammals between the marsupials and monotremes and closely allied to the carnivorous reptiles. The eighth step is to the Theromorous reptiles, belonging to the Permian period. These approach the mammals in organization. Next we reach the Stegocephalus-Batrachians (primitive Salamanders), of the carboniferous or coal period. The tenth and last traceable step takes us to the early fishes, though just what type of fish is uncertain. Haeckel, the German naturalist, a number of years ago offered an elaborate series of steps of descent; this of Prof. Cope is based on later studies of analogies in animal anatomy, though these analogies are far too technical to be here introduced. See DARWINIAN THEORY; EVOLUTION.

Des Chutes River, in Oregon, rises on the E. slope of the Cascade range, near Lat. $43^{\circ}13'$ N., runs nearly northward, with a small deviation toward the E., intersects Wasco co., and enters the Columbia river about 12 miles above The Dalles. Its length is estimated at 320 miles. It traverses a hilly or mountainous region, a large part of which is of volcanic formation.

Desenza'no, a town of Italy, in Lombardy, 16 m. E.S.E. of Brescia, on the S.W. bank of Lago di Garda. It is defended by an old castle, and has numerous manufactures of silk hosiery. It is a favorite summer resort. Pop. (1895) 4,260.

Desgoffes, BLAISE ALEXANDRE, artist; born in Paris, Jan. 17, 1830, studied with Flaminio. His works show great attention to detail, every part being carefully finished. His subjects were often ivories, enamels, bronzes &c. His *Amethyst Vase*, and *Crystal Vase and other Objects*, are in the Luxembourg Gallery, Paris. The second-class medals of the Salons of 1863 and 1878, and the third-class medal of the Paris Exposition of 1889, were awarded him.

Desh'ler, in Ohio, a post-village of Henry co., on the B. & O. and C., H. & D. R.Rs., 37 m. S.S.W. of Toledo; has manuf. of barrels, shingles, &c. Pop. (1897) about 1,260.

Design. Schools of. (*Educ.*) The Crystal Palace International Exhibition, held in London in 1851, first convinced English manufacturers that they had fallen behind the Continental nations in the arts of industrial design, and led to the establishment of *S. of D.* in that country for the purpose of stimulating the study of drawing and its relation to the industries. Previously, drawing had been taught only in its relation to the fine arts, and in schools generally it was treated as an accomplishment of little practical value. The few schools in which the arts of design were taught were small and poorly supported, and did little in the way of educating industrial designers or teachers of the art. The stimulation produced by the World's Fair in England had its effect in the U. S., in awakening attention to this branch of art. The earliest institution in which industrial art education was given was the Franklin Institute of Philadelphia, established in 1824, one of whose purposes was the instruction of young men in mechanical and architectural drawing. Other mechanics' institutes followed. Their instruction, given to night classes, and chiefly elementary, represented for nearly fifty years almost the only means in the U. S. for obtaining education in industrial drawing. It is interesting to observe that the first school in this country established for this express purpose was intended for women. This was the Philadelphia School of Design for Women, founded in 1847. In the following year it was followed by the Schools of Art and Design of the Maryland Institute. These schools were in advance of the time in this country, and struggled along with poor support for many years. Others were started from time to time, there being eight such schools in the country by 1860. In 1861 the Massachusetts Institute of Technology was established, its course of instruction covering the industrial arts more fully than had previously been done, and serving as a model for the newer class of *S. of D.* In 1870 a movement began in Massachusetts to have drawing taught in the public schools, in answer to a petition from manufacturers to the effect that they could not fairly compete with their foreign rivals from lack of workmen skilled "in drawing and other arts of design." By 1874 twenty of the cities and large towns of the State had complied in a measure with the law, although qualified teachers were greatly lacking, showing how the art had been neglected. In 1873 a State Normal Art School was established in Boston under the direction of Mr. Walter Smith, previously head master of the school of art at Leeds, England. It is largely due to his efforts that art education in the public schools of Massachusetts and other States has had its recent great development. But America, like England, still needed a thorough awakening to the needs of industrial art education, and it came here, as it had come in England, through a realizing perception of her inferiority. The Centennial Exhibition at Philadelphia in 1876 proved the turning

point in American industrial art. Visited, as it was, by teachers, artists and mechanics from all sections of the country, it became generally perceived that this nation was far behind Europe in that field of industry. In textile fabrics, paper hangings, oil cloths, pottery, glass, and ornamental metal work the deficiency in art ideas was strongly apparent, the American products being either mere imitations of European products or inferior efforts at original design. The discovery of this deficiency produced an immediate and vigorous stimulation. The few *S. of D.* in existence were enlarged and more liberally endowed, others were started, and museums of industrial art were founded, in which artisans might see examples of the best work in their special fields. Of the direct results of the Exhibition, a very important one was the founding of the Pennsylvania Museum and School of Industrial Art, the museum being displayed in Memorial Hall (the art gallery of the Exhibition), where is now collected perhaps the finest museum of industrial art products in the country, while the school associated with it is one of the most advanced and prosperous. The stimulation to other art institutions in Philadelphia was marked. The School of Design for Women moved to larger quarters and has become immensely developed in its usefulness; the Academy of the Fine Arts reorganized its system of instruction, the Spring Garden Institute and Franklin Institute enlarged their facilities for art instruction, and in the little more than twenty years following the Centennial Exhibition of 1876 industrial art education in Philadelphia has increased enormously, it being now a recognized branch of the public school system, a higher branch of which, the Manual Training Schools, is largely devoted to it. The activity thus displayed in the city of the Centennial Exhibition has been equally shown in other cities. Boston, which had already established elementary drawing in its public schools, founded new art schools, which were soon filled with pupils trained in elementary drawing. Cincinnati organized schools of decorative art which rivalled those of Boston. Baltimore reorganized the old schools of the Maryland Institute, which now became thoroughly equipped schools of design. New York founded new schools in connection with the Metropolitan Museum of Art, and added industrial drawing to the branches taught in some other institutions. Throughout the country, in fact, the importance of this branch of art instruction became acknowledged, and the teaching of industrial art has now made its way into a multitude of educational institutions, while instruction in drawing has become a permanent feature in the public schools of the principal cities as a necessary branch of a general education. Industrial drawing is also taught as an essential in the U. S. Military Academy at West Point, the U. S. Naval Academy at Annapolis, and in the principal universities, colleges and preparatory schools of the country.

Des'mids, *n. pl.* [*Gr. desmos*, chain; *eidos*, form.] (*Biol.*) A family of single-celled, microscopic algae. (*Desmidiaceae*) dwelling in fresh water and numbering in all about 1,100 species. They closely approach the Diatoms, but, unlike those, possess true chlorophyll, to which their green color is due, and lack silicified walls. They vary in form from fusiform to cylindrical and disk-shaped, and are often much constricted in the middle portion. Some of them have self-power of movement. They reproduce by fission, a constriction taking place which yields two individuals differing in size, separated by a partition. The smaller lobe now grows, and separation usually takes place, though in some cases they remain attached and form long filaments. There is also a sexual reproduction, of the form known as conjugation. In this, two cells break open and their contents unite into a single mass, which soon becomes surrounded by a thick wall. The contents afterward separate into two parts, each of which in the end becomes a new desmid.

Des'moid, *a.* [*Gr. desmos*, band, *eidos*, form.] (*Anat.*) Resembling, or consisting of, a ligament; fibrous.

Detaille, JEAN BAPTISTE EDOUARD, military painter, born in Paris, Oct. 5, 1848; a pupil of Messonier. He was awarded medals of honor from the Salon of 1888 and the Paris Exposition of 1889. He is counted one of the foremost painters of the day, is a careful and accurate draughtsman, and his military pictures take high rank in the modern French school. Among them are: *Skirmishing near Paris*, and *French Cuirassiers bringing in Bavarian Prisoners*, the former in the Vanderbilt collection, N. Y., and the latter in the Corcoran Gallery, Washington, D. C.

De Trobriand, PHILIP REGIS, author and officer in the U. S. Army, born June 4, 1816, in Tours, France. After his removal to the U. S. he took part in the Civil War, giving his support to the Union cause, and attained the brevet rank of major-general of volunteers. At the close of the war he served in the West; retired March 20, 1879. He was the author of *Quatre ans de Campagnes à l'armée du Potomac*, and *Les Gentilshommes de l'Ouest*; also, editor and publisher of the *Revue du Nouveau*, and editor of the *Courrier des Etats-Unis*.

Development Theory. See DARWINIAN THEORY; EVOLUTION; DESCENT OF MAN, &c.

Dev'ens, CHARLES, JR., jurist, born in Charlestown, Mass., April 4, 1820; graduated from Harvard and studied law at Cambridge; was U. S. marshal for the district of Mass. at the time when the case of Thomas Sims, a fugitive slave, attracted general attention, D. delivering Sims to his master in accordance with the law, and afterward endeavoring to free him by purchase, and finally succeeding after the outbreak of the Civil War; served in the Federal Army (1861-65), retiring with the

full rank of Brigadier-general and the brevet rank of major-general; resumed his legal work (1866); was Associate Justice of the Massachusetts Supreme Court (1873), and Attorney-General of the U. S. (1877); afterward (1881) resuming his place on the Supreme Bench of his native State. Was prominent in the G. A. R., serving one term as Commander-in-Chief. Died Jan. 7, 1891.

De Vere', AUBREY THOMAS, a poet and political writer, born at Curragh, Chase, Ireland, Jan. 10, 1814; educated at Trinity College, Dublin. He has published *The Waldenses*, a lyrical tale (1842); *Poems, Miscellaneous and Sacred* (1856); *Lisfail* (1861); *The Infant Bridal* (1864); *Irish Odes* (1869); *The Legends of St. Patrick* (1872); *Alexander the Great* (1874); and *Religious Poems of the Nineteenth Century* (1893), &c. His prose works include: *English Misrule and Irish Misdeeds* (1848); *Picturesque Sketches of Greece and Turkey* (1850); *The Church Settlement of Ireland* (1866); *Ireland's Church Property and the Right Use of It* (1866), and many others. He edited, in 1878, a correspondence on religious and philosophical subjects, under the title of *Proteus and Amaleus*.

Devereux (*d'v'el-roo*), JOHN HENRY, born in Boston, Mass., April 5, 1832; educated at Portsmouth, N. H., in civil engineering, and at once took up the work of railroad construction. Was appointed by U. S. government Superintendent of Military Railroads (1862). After the war held various important and influential positions in the railway systems of the northern central States. It was owing to his personal courage that 800 of his men were prevented from taking part in the railway riots of 1877. Died in Cleveland, O., March, 1886.

Dev'il-fish, *n.* (*Ichth.*) A name applied to several fishes of forbidding aspect, especially the large ray (*Manta birostris*) found in the warmer American waters, and said to be a formidable enemy alike of other fishes and mankind; the octopus, or large cuttle-fish; the angler; and, on the Pacific coast, the gray whale. The *D. f.* of Australia is *Laccapedia cataphracta*, a cirrhitoid fish of the southern Pacific.

Dewas (*du'anz*), a town of British India, province Malwah, on an affluent of the Chumbul. It is the cap. of a state having a pop. of 11,721.

Dewey, MELVIL B.A., M.A., born in Adams Center, Jefferson co., N. Y., Dec. 10, 1851. He was educated in Amherst College, graduating in 1874. Previous to graduation and for the two succeeding years he was acting librarian at the college. He was founder of the American Library Association in Boston; served as its secretary for fifteen years, and was then appointed president. In 1883 he became chief librarian of Columbia College, and the next year director of the School of Library Economy of that college. One of his most valuable contributions to education was the careful revision and expansion of the laws of New York pertaining to higher education, including libraries. This was known as the "University Law." He is the author of *Rules for Authors and Classified Catalogues*, now published, with the addition of other rules, as *Library School Rules*; and has edited the *Metric Bulletin* and *Metric Advocate*; *Library Journal*, &c.

Dewey, ORVILLE, D.D., LL.D., Unitarian clergyman, born in Sheffield, Mass., March 28, 1794; educated at Williams College and Andover Theological Seminary; was originally a Calvinist, but adopted the Unitarian belief, preached as the assistant of Mr. Channing in Boston, and held several other pastorates, the last being that of the New South Church in Boston. In 1862 he gave up the ministry, devoted himself to study, and travelled for his health. He published *The Unitarian Belief*, and a volume of European travel; lectured on *The Problem of Human Life and Destiny*, and *Education of the Human Race*; and wrote controversial papers. Died in Sheffield, Mass., March 21, 1882.

Dewsbury (*dūz'bry*), a manufacturing town and parish in England, co. of York, West Riding, on the Calder, 8 m. S.S.W. of Leeds. Manuf. Blankets, carpets, &c. Pop. (1895) 29,400.

Dex'ter, HENRY MARTYN, D.D., LL.D., clergyman, born at Plympton, Mass., August 13, 1821; graduated from Yale in 1840, and Andover in 1844, becoming the same year pastor of a church in Manchester, N. H.; removed to Boston in 1849, and was minister of the Berkeley Street Congregational church till 1867. Became chief editor of the *Congregationalist*, and was a prolific writer, chiefly on history and Congregationalism, on which subjects he could speak with authority, having been a diligent student and explorer. Published *The Congregationalism of the Last Three Hundred Years*; and a work upon which he had been long engaged and at his death left unfinished was *English and Dutch Life of the Plymouth Pilgrims*. Died at New Bedford, Mass., November 13, 1890.

Dex'trose, *n.* (*Chem.*) A sugar which largely exists in vegetable tissues and honey, and is also found in animal organisms—the liver, urine and blood. The commercial product is made by treating starch with sulphuric acid, the resulting solid product being termed grape sugar, and the syrupy by-product glucose.

Dhow (*dow*), *n.* A coasting vessel, now common in East Indian waters but probably of Arabian origin; has one mast, a broad stern, and a sharp bow.

Diamonds, Artificial. Many efforts have been made to produce diamonds through the artificial crystallization of carbon, and not without success, though with no encouragement from a mercantile point of view. In 1880 J. B. Hannay, of Glasgow, announced that he had produced artificial diamonds by inclosing a mixture of paraffin spirit and bone-oil distillate with metallic lithium, in a strong wrought-iron tube, and

exposing it to prolonged heat in a reverberatory furnace. Minute specimens of crystallized carbon were obtained, but these, when placed on the wheel, immediately crumbled. More recently diamonds have been produced by the enclosing of carbonaceous material in steel, in which it is volatilized and absorbed by the steel under the heat of the electric furnace. The steel is then subjected to great pressure, and the carbon crystallizes out during the cooling process. Minute diamonds have been thus produced, but no promise of larger ones appears. It is an interesting fact that diamonds have been discovered in meteorites. In one which fell in Russia, in 1886, about one per cent. of diamantoid carbon was detected, and similar instances have more recently appeared.

Diathermancy, n. (*Phys.*) A term employed by Melloni to designate the property of transmitting radiant heat. It therefore corresponds to *transparency* in the case of light, and the expression "transparent to heat-rays" is occasionally employed. If we have a source of heat placed near a thermometer, a rise of the mercury will be produced; if now a thin plate of rock-salt is introduced between the source and the thermometer, the mercury will fall but slightly, because the rock-salt permits nearly all the heat from the source to pass through it in virtue of its diathermancy; but if a plate of the same thickness of selenite or amber is placed between the source and the thermometer, a very marked difference will be observed; nearly all the heat will be cut off, and the thermometer will therefore indicate a very slight rise of temperature, because selenite and amber possess very slight diathermancy; that is, they are more or less opaque to heat-rays. Rock-salt is said to be a *diathermanous* substance, while selenite and amber are called *athermanous* substances, but this latter term is not so much used, because all substances allow a certain amount of radiant heat to pass through them. The apparatus employed by Melloni is represented in Fig. 2816, where AB is the thermo-electric pile; *a* is a support for the source of heat—in this case a Locatelli's lamp; F and E are screens, and C is a support for the body experimented upon; while *m* is the pile, and D the galvanometer. The transmission of heat through liquids was re-examined by Prof. Tyndall by

Fig. 2816.—MELLONI'S APPARATUS.

a more satisfactory mode of experiment than that employed by Melloni. The experiments were made in the following way: Instead of employing a glass vessel to hold the liquids under examination, he made use of a little cell whose ends were stopped by parallel plates of rock-salt. The plates were separated by a ring of brass, with an aperture on the top through which the liquid could be poured. As this plate could be changed at will, liquid layers of various thicknesses were easily obtainable, the apparatus being merely screwed together and made liquid tight by paper washers. The instrument was mounted on a support before an opening in a brass screen placed in front of the pile. The source of heat employed was a spiral of platinum wire raised to incandescence by an electric current; the spiral being enclosed in a small glass globe with an aperture in front through which the radiation passed unchanged in its character—a point of essential importance overlooked by Melloni.

Diathermoneter, n. [*Gr. dia*, through, *therme*, heat, and *metron*, measure.] (*Phys.*) An instrument for determining the thermal resistance of liquids. It consists of an air-thermometer terminated above by a brass cone faced with platinum, having its base uppermost and in a perfectly horizontal plane; the base of a second cone of precisely the same area can be approximated to the cone of the air-thermometer, and between the opposite bases the liquid to be examined is introduced. Now if we have a constant source of heat in the upper cone (such as a current of water of known and invariable temperature), it is obvious that by varying the liquids between the cones, and noting the effect in a given time on the column of liquid in the air thermometer, we can obtain results (comparable among themselves) of the relative thermal resistance of the various liquids employed.

Diatoms, n. pl. *Diatomaceæ*, an interesting group of microscopic algae which, despite their minute size, have played an important part in the formation of geological strata, immense numbers making up for deficiency in

size. They were first discovered by Leenwenhoek in 1702, and some 80 years later O. F. Müller perceived their powers of self-movement; but it was not until after the development of the compound microscope that they could be fully investigated, and their workings still afford a severe test for the powers of microscopes. The *D.* differ from the desmids (*q. v.*) in being inclosed in a silicious shell, or rather a double shell, for the silica is deposited in two halves which fit together somewhat like the body and lid of a box, or the two halves of a pill box. Within this rests the protoplasm of the plant form. The box, as we have called it, varies greatly in shape, becoming elliptical or wavy, squared or pointed, and in some cases unsymmetrically curved. The silicious shells, again, are covered with the most delicate marks and striations, these characteristics varying from species to species. The living protoplasm lines the shell, leaving a central sap cavity, often crossed by filaments of protoplasm. The coloring matter is a variety of chlorophyll marked by a yellow pigment. Starch is absent, but oil frequently appears as minute vacuoles or a single large drop. The *D.* have a peculiar creeping or gliding motion, whose mechanism has not been discovered. Their reproduction is similar to that of the desmids. Some 2,000 species are known, of which 400 reside in fresh water, the remainder being marine. They are distributed throughout all seas, with little regard, apparently, to temperature or climate, individuals of a single species having been observed in glacial waters and in hot springs. They live in enormous abundance at the surface of the sea in all latitudes, forming an important part of the basic food of the ocean fauna; while the mud of the sea bottom is very largely composed of their shells, which after death descend in a steady rain. Harbor mud is full of them, and they teem in all overflown soils, like that of Egypt. The result of this preservation is that immense beds of diatom shells have accumulated in past ages, strata of vast area and considerable thickness being found in various parts of the earth. These vary in hardness from the loose *Borgmehl* of Siberia and Lapland—which still contains so much undecomposed organic matter that it is mixed with flour in times of scarcity—to accretious hard enough for building stone, and from this to the extremely hard polishing slates of Tripoli.

Diaz (*dé-ás*), PORFIRIO, Mexican general and statesman, born in Oaxaca, Sept. 15, 1830. Studied law, but during the war with the U. S. joined the army and afterward devoted himself to military science. Was strongly opposed to the intervention of the French, and on April 2, 1867, took Puebla by assault. He besieged the city of Mexico and captured it, June 21, 1867. The same year he met with defeat as a candidate for the presidency, but was elected to that office May 5, 1877. During his term of office peace and prosperity reigned throughout the country, but as the Constitution of Mexico forbade the immediate re-election of a president, he was succeeded by Gen. Gonzales. At the end of his term, *D.* was again elected and since—the Constitution having been amended—has been successively re-elected. As President of Mexico he is very popular, and his wise measures have opened a bright future for that republic.

Diaz de la Pena, NARCISO VIRGILIO, landscape and figure painter, born of Spanish parents, at Bordeaux, Aug. 21, 1808. Was apprenticed to a porcelain painter at the age of fifteen, but desiring to paint in oils, he began without instruction from a master, and about 1831 exhibited in the Salon. He won fame by his landscapes and some of his works attain to a very high level. Though his figures are badly drawn, he stands among the foremost in the Romantic school of France as a colorist. At the Salon of 1848 the first-class medal was awarded him, and in 1851 he received the cross of the Legion of Honor. His painting of *The Storm* is owned by W. T. Walters, of Baltimore.

Dicey, EDWARD, C.B., journalist, born in Leicestershire, England, May, 1832; educated at Cambridge, graduating B.A. in 1854. Became contributor to a number of leading periodicals, and served for several years on the staff of the *Daily Telegraph*, subsequently acting as special correspondent for that paper in different parts of the Continent. Became editor (1870) of the *London Daily News* and later of the *Observer*. Author of *Rome in 1860*; *The Morning Land*; *The Schleswig-Holstein War*, &c.

Dickinson, ANNA ELIZABETH, orator, born in Philadelphia, Oct. 28, 1842. She delivered her first public speech at a meeting for the discussion of woman's rights in 1860, achieving success at once as a speaker. During the Civil War she made numerous political and patriotic addresses, and later spoke upon the subjects of woman suffrage, labor-reform, &c. Is the author of the plays of *Marie Tudor* and *Anne Boleyn*, and herself acted the principal part in each of them when they were produced. Owing to impaired health, due probably to overstraining of her physical and mental powers, she has for several years lived in comparative retirement.

Dickinson, DOX M., lawyer, born at Port Ontario, N. Y., in 1845. In his childhood he was taken to De-

troit, Mich., and has since made it his residence. Studied law at the University of Michigan, and began its practice in Detroit. Received the appointment of postmaster-general in President Cleveland's cabinet Jan. 16, 1888, and held the position till the end of the administration, March 4, 1889.

Dickinson College, (*Educ.*) An institution of learning at Carlisle, Pa., founded in 1783, and the oldest college in the State except the University of Pennsylvania. Its name was given in recognition of the valuable gifts made and personal interest taken by Hon. John Dickinson. Until 1883 it was under the control of the Presbyterian Church, but the division of that church into Old and New Schools seriously affected the finances of the college, and it was passed over to the Methodist denomination, under whose care it still remains. Of late years its endowment has considerably increased, amounting now to \$350,000. It has a library of 40,000 volumes.

Dickson, SIR COLLINGWOOD, soldier, born 1817. Entered the Royal Artillery in 1835 as second lieutenant. Served in the battles of Alma and Inkerman, and at the capture of Balaklava. He gained the Victoria cross for gallantry at the siege of Sebastopol, and was brevetted lieutenant-colonel and colonel. Rose to be general in 1877. From his own government he received a medal with four clasps, and also a medal from the Turkish government. He was made an officer of the Legion of Honor, and aide-de-camp to the Queen, and is also knight of the order of Charles III. and of Isabella the Catholic.

Dickson City, in Pennsylvania, a post-borough of Lackawanna co., 5 m. by rail N. of Scranton; in a coal mining region; has foundry and machine shops. Pop. (1897) about 3,500.

Didier, (*dé-di-ä*), JULES, landscape and animal painter, born in Paris, May 26, 1831. Was awarded the Grand Prix de Rome (1857), and the medals of the Salons (1866 and 1869). At the Paris Exposition of 1889 he won the third-class medal. Among his best works is a *Farm in Roman Campagna*. It is in the Luxembourg Gallery. He has a studio in Paris.

Didron, ADOLPH NAPOLÉON, French archaeologist, born at Hautvilliers, Marne, March 13, 1806. He published the *Annales Archéologiques*, a work devoted to mediæval art and antiquities, which now numbers twenty-eight quarto volumes, the last volume having been added after the death of the author. Among his works are a *Manual of Christian Iconography*, translated from an ancient manuscript, and *Christian Iconography*, which forms a history of the representations of the persons of the Trinity in art, their attributes, &c. Died Nov. 13, 1867.

Diefenbach, LORENZ, philologist, born at Ostheim, Hesse-Darmstadt, July 29, 1806; educated at the University of Giessen. Was for 12 years pastor and librarian at Solms-Laubach. In 1848 he made his residence at Frankfurt-on-Main and subsequently was appointed second-librarian to that city. He was a writer of remarkable industry, and many of his works are of the greatest value. The most important are *Celtica*; *Vergleichendes Wörterbuch der Gothischen Sprache*; *Glossarium Latino-Germanicum Mediæ et Infimæ Etatis*, a supplement to Ducange's *Glossary*; *Hoch und Nieder-Deutscher Wörterbuch*. Died March 28, 1883.

Dielec'tric, n. (*Elec.*) A substance through which electrostatic induction will take place. This property belongs to insulators rather than conductors of electricity, and is possessed in varying degree by solids, liquids and gases. The *D.* value of any substance is measured by the ratio of the capacity of a condenser in which it forms the insulating substance to that of the same condenser in which it is replaced by a vacuum.

—*a.* Transmitting electric force by induction, not by conduction.

Diels, HERMANN, born in Hamburg, Germany, May 18, 1848; graduated at Bonn, 1870. In 1879 his epoch-making work *Doxographi Græci* was issued. He became professor at the University of Berlin in 1880, and a member of the Berlin Academy. He has published an edition of Simplicius's *Commentary on the Physics of Aristotle*; a treatise on the *Chronica of Apollodorus*, and other works on classical subjects.

Dieterici (*dé-ter-ré'tsē*), KARL FRIEDRICH WILHELM, a German orientalist, was born at Berlin, July 6, 1821; studied theology at Halle and Berlin, and oriental languages under Rödiger and Fleischer. Spent eighteen months in Cairo under the instruction of a learned sheik. Was appointed professor extraordinary in the University of Berlin (1850). He gave special attention to the Arabic philosophy of the 10th century, and has published *Logik und Psychologie*; *Naturanschauung und Naturphilosophie*; *Anthropologie*, &c. His works include an Arabic-German dictionary, volumes of travels, and an edition of the poet Mutanabbi. Died in 1859.

Dienlaffoy (*dé-uh-lä-fä-ü*), MARCEL AUGUSTE, engineer and archaeologist, born in Toulouse, France, Aug. 3, 1844, rendered famous by his explorations in the ancient monuments of Persia. They are described in his *Ancient Art of Persia and his Acropolis of Susa*. His wife has been an assistant in his work, and has herself published several books, entitled *Persia*; *Susiana*; *Chaldea*; and *Susa*.

Diez (*deets*), WILHELM, genre and military painter; born at Baireuth, Germany, Jan. 17, 1839; studied in Munich, and became professor at the Munich Academy. His work, even in his large canvasses, shows careful attention to detail. His painting of the *Picnic* is in the National Gallery, Berlin.

Dig'by, KENELON HENRY, author, born in Ireland in 1880; graduated at Cambridge (1823). His *Broad Stone*

of Honor, or Rules for the Gentlemen of England, was written before leaving college. He was a close student of the scholastic theology and history of the Middle Ages, and his *Mores Catholici* embodies the fruit of these studies. His works, fifteen in number, eight of them in poetry, have many and ardent admirers. Died in London, March 22, 1880.

iko'wa, or **Deegoa**, a commercial town of Bornou, Central Africa, 60 m. S. of Kouka, and 30 S.W. of Lake Tchadda. Pop. (1895) 30,000.

ilke, SIR CHARLES WENTWORTH, politician, born in Chelsea, England, Sept. 4, 1843; educated at Cambridge, graduating in 1866 and soon after called to the bar. Was returned to Parliament (1868), and re-elected (1874). Was appointed under-secretary of state for foreign affairs (1880), and subsequently made president of the local government board, with a seat in the cabinet. Was chairman of the Royal Commission on the Housing of the Working Classes. Defeated for Parliament in 1886, he retired from public life until 1892, when he was again returned as a Liberal by the Forest of Dean with a heavy majority. His great work is entitled *Greater Britain, a Record of Travel in English Speaking Countries during 1890-7*, which passed through several editions and was said to have procured the author's first election to Parliament. He is the author of *The Present Position of European Politics*, &c.; is proprietor of the *Athenæum*, also of *Notes and Queries*, and one of the proprietors of the *Gardener's Chronicle*.

ilke, LADY EMILIA F. (STRONG), English author, born in 1842. Her marriage to Sir Charles W. D. took place in 1885; her former husband was the Rev. Mark Pattison. She chose the subject of art, and has written: *The Renaissance of Art in France*; *Claude Lorrain, sa vie et ses Œuvres*; *Art in the Modern State*, &c., and has contributed art criticisms for the *Academy*.

Ilmm, CHRISTIAN FRIEDRICH AUGUST, theologian and Orientalist, born at Illingen, Württemberg, April 5, 1823. As a student at Tübingen, he gave special attention to the study of Oriental languages. He visited libraries cataloging Ethiopic MSS. On his return to Tübingen, he took up teaching, became professor of Exegetical Theology (1853) and of Oriental languages at Kiel (1860), but was transferred to the chair of Old Testament Exegesis at Giessen (1864), which he resigned to become Hengstenberg's successor at Berlin (1869). He is noted for his works on the Ethiopic language, which include: *Lexicon lingue Ethiopice*; *Chrestomathia Ethiopice*, and editions of the old Ethiopic version of the Bible.

Ilon, JOHN, M. P., Irish politician, born in New York City in 1851, son of an Irish agitator, John Blake Dillon, who was obliged to flee to America. He was educated at the Catholic University of Dublin and made a study of medicine. In 1880 he was returned to Parliament for Tipperary, but was suspended in the following year. He has represented East Mayo since 1885, and is one of the most noted leaders among the Parnellites. He has been several times arrested for political causes.

Ilon, in *Montana*, a city, the cap. of Beaver Head Co., on U. Pac. R. R., 65 m. S. of Butte city; has some manufactures, and is the trade center of a fine grazing and farming region. Pop. (1897) about 1,500.

Iman, JEREMIAH LEWIS, D.D., Congregational minister and educator, born at Bristol, R. I., May 1, 1831. He was a student of Brown University and, for two years, of Andover Theological Seminary, and subsequently studied in Germany at Halle, Munich, Heidelberg and Berlin. After his return to America in 1856, he graduated at Andover, and the same year became pastor of the First Congregational Church at Fall River, Mass. In 1860 he removed to Brookline, Mass., and after serving there as pastor for a period of four years, became professor of History and Political Economy in Brown University. He made a valuable contribution to philosophy by his work on *The Theistic Argument*. Died at Providence, R. I., Feb. 3, 1881.

Irjelstedt, FRANZ, VON, poet and novelist, born at Isdorf in Hesse, June 30, 1814. He studied at the University of Marburg, and in 1836 became a professor of Cassel; in 1845 was appointed keeper of the royal library of Württemberg at Stuttgart; in 1850 intendant of the royal theater at Munich; director of the imperial opera house in Vienna in 1867, and of the great Burgtheater in the same city in 1871. He was created a baron by the Emperor of Austria in 1876. His works include: *Unter der Erde*; *Gedichte*; *Das Haus des Barfeldt*; and *Nacht und Morgen*. Died at Vienna, May, 1881.

Itthe'ria, **Antidotoxin Treatment of**. The antidotoxin, or anti-diphtheritic, serum prepared from the crobic poison of this disease, has been widely employed its cure, and with very encouraging results. A decree of the German Chancellor, calling for reports regarding the treatment, brought forth statistics covering the months of 1895, to the effect that the percentage deaths in 2,228 cases was only 17.3; whereas in the earlier treatment the percentage averaged about 50. Statistics collected at Paris yield a similar indication. In 1884 the deaths from diphtheria in Paris hospitals were 1,400, and from 1887 to 1890 averaged about 900 a year. From 1892 to 1894 they averaged 733. In 1895, after serum treatment, they were 239. See ANTIDOTOXIN.

Ivks, HENRY, civil engineer, born at Liverpool, Aug. 1806; has published *The Ghost*; *Inventors and Inventions*, and works on perpetual motion and electrocallurgy, besides novels and essays.

Infection, *n.* (*Hygiene*.) The destruction of the seeds of infectious and contagious diseases by the employment of chemical or thermal agents. The theory is based on the belief now generally entertained

that diseases of the kind mentioned are due to the presence of minute organisms, known generally as microbes, or bacteria, which reproduce rapidly within the body and yield the specific poison of the disease. The disinfectant is supposed to destroy these organisms. *D.*, however, as ordinarily spoken of, is largely preventive, or consists in an effort to destroy possible dangerous germs, without any assurance that they are actually present, as when we speak of disinfecting sewage, hospital wards, &c. The most certain disinfectant is heat. It may be applied as fire, to destroy dangerous material, or be used in the form of dry hot air, steam, or boiling water. This is the cheapest and most effective method of disinfecting clothing, bedding, and similar materials. Dry heat at a considerable temperature may be used for sterilizing glass, metal, crockery, &c., but is not safe for textile fabrics, which may be charred or otherwise injured. In consequence, the disinfecting oven is now usually replaced by chambers into which steam under slight pressure can be introduced, its pressure being sufficient to prevent deposition of moisture, and so applied as to drive out all air from the interstices of the infected substances. These chambers are usually made of boiler iron, and may be either fixed or movable. The purpose of the process is to kill the disease-producing organism, which can be effected in nearly or quite every case by heat. In some cases cobalt acts as a natural disinfectant, as in yellow fever, which vanishes as soon as frost appears. But some pathogenic organisms appear to resist the greatest degree of cold. Of chemical disinfectants many are employed, sulphur dioxide and chlorine being used in the gaseous state, carbolic acid and other substances as liquids, and still others in the solid state. Of the latter chloride of lime is one of the most widely employed, particularly for the *D.* of cesspools and privy vaults. Corrosive sublimate is also largely employed in *D.* Other chemical disinfectants which are less commonly used are chloride of zinc, permanganate of potash and various coal-tar products. These, with iodoform, peroxide of hydrogen, &c., are employed in medical and surgical practice, for special purposes, but are less desirable for ordinary *D.*, for several reasons, than the other substances named. By sterilization is meant the destruction of all living things that may be present on some surface or within some space. It implies *D.*, but goes farther, since the latter is only intended to kill the pathogenic microbes, and may leave others unaffected. Sterilization is of the first importance as applied to surgical instruments. It is customary to boil these in water containing two per cent. of common soda. Dental tools also should be carefully sterilized, though this is by no means always done. Of natural disinfectants, in addition to heat, may be named sunlight and air, the light of the one and the drying action of the other being unfavorable to the growth of micro-organisms. Air, or its active element oxygen, may exercise an indirect influence on dangerous bacteria, by favoring the growth of the common aerobic microbes which are active in nitrification and decay, and which may either use the pathogenic microbes as nutriment or destroy them by yielding products poisonous to them.

Dissection Wounds. (*Path.*) There are dangers connected with surgery and practical anatomy which have been much lessened in recent years, but still exist in a measure. Ventilation and sanitary measures have done much to render safer the atmosphere of the dissecting-room, formerly loaded with noxious emanations. This condition of affairs added to the danger from *D. W.*, which are always attended with a degree of risk. The purer air and the general use of antiseptic preparations injected into the vessels of the subjects to be dissected have largely reduced this risk, so that now a cut or puncture is rarely followed by severe symptoms; but in cases of post-mortem dissections, if undertaken soon after death from erysipelas, pyæmia, and allied diseases, a wound received may lead to very serious consequences. When a wound is received during dissection, the wounded part should be tightly ligatured and encouraged to bleed freely. If no blood flows it should be sucked, and then freely touched with carbolic acid or other caustic. Such wounds may be followed by irritation and suppuration without serious results. In case of the absorption of dangerous poison the patient feels sensations of illness within twenty-four hours, becomes low-spirited, faint, and chilly, with feelings of nausea. There follow rigors, intense headache, rapid pulse, a coated tongue, sometimes vomiting, and great restlessness. These symptoms increase in severity, and others are added; and the patient may die at or before this stage. Abscesses may continue to form from which the patient may sink more slowly. If he survive, the arm may remain stiff and useless, or some of the fingers may be destroyed by gangrene. The treatment is similar to that employed in cases of pyæmia. In post-mortem examinations, where death has occurred from one of the class of diseases mentioned, the hands of the surgeon should be thoroughly anointed with lard. Very thin India-rubber gloves have been recommended, but they are not suitable because of their constraint on the freedom of action of the fingers.

Dis'trix, *n.* [From Gr. *dis*, privative, and *trix*, hair.] (*Path.*) An affection in which the hairs of the scalp become slender and split at their extremities. The excessive use of salt, night work, and various other causes may induce it. The hair should be cut short, the scalp wetted morning and evening with cold water, and occasionally shampooed.

Div'i-div'i, *n.* [Native West Ind.] (*Bot.*) *Cesalpinia coriaria*, a shrub of tropical America. Also, the brownish pods of this shrub, used in tanning and dyeing.

Divirigi (*de-rir'eje*), (anc. *Tephrene*) a town of Turkey in Asia, prov. Rumili, on an affluent of the Euphrates, 28 m. N. N.W. of Arabkir. Pop. (1895) about 9,800.

Dix, DOROTHEA L., an American philanthropist, born about 1794 in Massachusetts; in early life was employed as a teacher; subsequently devoted her life to alleviating the miseries of lunatics, criminals and the poor. Congress, at her repeated intercession (1854) appropriated 10,000,000 acres of public land to endow hospitals for the insane, which action was, however, vetoed by President Pierce. Died July 19, 1887.

Dix, JOHN A., soldier and statesman, born in Boscawen, N. H., July 24, 1798. In 1812 his father, Lieut.-Col. D., was stationed at Ft. McHenry, Baltimore, and he entered the army as cadet; was made ensign (1813); was soon promoted to be 3d lieutenant, and was made adjutant of an independent battalion of 9 companies; rose to be captain (1825), but resigned his commission in 1828. He was appointed adjutant-general U. S. A. in 1830. He graduated at Brown University (1830) and completed his studies in a French college at Montreal. He had studied law while in the army, took up its practice at Cooperstown, N. Y., and entered the political field. He was the successful Democratic candidate for the office of Secretary of State in 1833; was comptroller of New York in 1834; in 1842 was elected to the State Legislature; from 1845 to 1849 he represented his adopted State in the U. S. Senate, succeeding Silas Wright. In the Senate he advocated the "Free Soil" doctrine, and was the candidate of the F. S. Democrats for governor of N. Y. in 1848. Was assistant treasurer at New York (1853), and postmaster at New York (1860). The same year, for a period of three months, Dec., 1860-March, 1861, held the position of Secretary of the U. S. Treasury. It was while holding this position that he issued his frequently quoted order to the Federal authorities at New Orleans: "If any one attempts to haul down the American flag, shoot him on the spot." In May of the last-named year he was appointed major-general, and in 1863 took command of a force which threatened Richmond and cut Gen. Lee's communications with the James river. In 1863 he took command of the military department of the East; became U. S. Minister to France (1867-68) and was elected Governor of the State of New York in 1872. He was author of several books of travel, and made a noted translation of the *Dies Iræ*. Died in New York city, 1879.

Dix, MORGAN, S. T. D., theologian, was born Nov. 1, 1827, in Albany, N. Y.; son of John A. D.; graduated from Columbia College (1851) with the degrees of A.B. and A.M.; after the completion of his studies in the General Theological Seminary of the P. E. church, was made deacon, and the following year ordained priest by Bishop Potter; became rector of Trinity parish, New York, Nov. 10, 1862, having previously been assistant minister (1855), and assistant rector (1859). Dr. Dix is a trustee of Columbia College, and a member of the standing committee of the General Theological Seminary of the Protestant Episcopal Church of America. His works include: *The Christian Altar*; *Lectures on the Pantheistic Idea of an Impersonal Substance Deity, as Contrasted with the Christian Faith Concerning God*; *Thoughts on the Lost Unity of the Christian World, and on the Steps Necessary to Secure its Recovery*.

Dixon, in *California*, a post-town of Solano co., on So. Pac. R. R., 22 m. W. S. W. of Sacramento. Pop. (1897) about 1,200.

Doane, GEORGE WASHINGTON, D.D., LL.D., bishop and poet, born at Trenton, N. J., May 27, 1799; graduate of Union College (1818), ordained deacon (1821), and priest (1823). Became priest in Trinity College, Hartford (1824), and edited the *Episcopal Watchman*. Officiated at Trinity Church, Boston, for two years (1828-30), and in 1832 was chosen bishop of New Jersey. He established St. Mary's Hall, a school for girls, and a college for boys, at Burlington. He published a volume of poems, and addresses on theological topics. Died at Burlington, April 27, 1859.

Doane, WILLIAM CROSWELL, theologian, son of Geo. W. D., was born in 1832; consecrated P. E. Bishop of Albany (N. Y.), in 1869.

Do'bell, SYDNEY, poet, son of a wine merchant, born at Cranbrook, Kent, Eng., April 5, 1824. He was educated privately, never attending school or college. At the age of 20 he married Emily Fordham, and his life was mostly spent in the country, or travelling on the Continent. His first published poem was *The Roman* (1850), under the nom de plume of Sydney Yendys. It was dedicated to the cause of political liberty in Italy. *Bohler*, his second large poem, was intended to show the evil effects of egotism and ambition. *England in Time of War* is regarded as his most pleasing work. His prose writings were published under the title of *Thoughts on Art, Philosophy, and Religion*. He delivered an elaborate lecture on the *Nature of Poetry*, in which he describes a perfect poem as "the perfect expression of a perfect human mind." D. was possessed of a lovely character and disposition, and had a large circle of admiring friends; including such men as Browning, Tennyson, Carlyle, Ruskin, Hugh Miller, and Alexander Smith. Died Aug. 22, 1874.

Dobson, HENRY AUSTIN, poet, born in Plymouth, Eng., Jan. 18, 1840. Was educated for a civil engineer, but for many years has held a clerkship in the Board of Trade; is a special student of art and literature of the eighteenth century, and is the author of studies of Hogarth; *Thomas Berwick*; *Sir Richard Steele*; and *Oliver Goldsmith*. Has also published *Vignettes in Rhyme*; *Proverbs in Prose*, with other works, and is most excellent as a writer of society verse.

Docks. (*Naut. Eng.*) Of these artificial basins for the handling of shipping, there are two principal kinds: the *wet dock*, in which vessels are kept afloat when loading or unloading, or when "laid up;" and the *dry dock*, in which the hulls may be exposed from keel to deck for the purpose of examination and repair. These two classes are subdivided according to their specific uses and modes of construction; thus we have *tidal*, *floating*, *timber*, and *balance* docks, and various other specialized forms which we shall describe hereafter.

Wet Docks. A wet dock is a large basin enclosed by walls which retain the water at a fixed height, nearly uniform with that of high water, so as to keep the vessel afloat with her decks at the quay-level, thus facilitating the loading and unloading of cargoes. They are generally surrounded by walls of masonry or brick, forming quays or wharves, unless they are intended simply as a resting or storing harbor for ships, when their margins may be the natural soil. Wet docks are of most importance where the rise and fall of the tide is considerable, as at Bristol or Liverpool, its range being there about 30 feet. Wherever the tides rise and fall 12 feet or more, wet docks are almost indispensable. In the Clyde at Glasgow, where the spring tides reach only about 10 feet, wet docks are not employed, tidal basins, excavated to a sufficient depth, being used instead. This is also the case along the Atlantic coast of the U. S., where the tides are lower, ranging from 9 feet 6 inches, at Boston, to 1 foot 8 inches at Baltimore and

Fig. 2817.—SECTION OF CAISSON.

Galveston. Wet docks are usually entered by means of a lock, having two sets of gates far enough apart to admit the longest vessel using the dock. By the aid of these, vessels can enter and depart without waiting for high water. In some cases, however, to economize space and cost, only one set of gates is used, so that the dock can be entered only at or near high water. The gates, when on a large scale, are opened and closed by means of hydraulic machinery. The tendency of the dock to silt up by the deposit of fine mud renders dredging occasionally necessary, and at times they must be emptied for the purpose of cleansing. Docks are provided with proper moorings on the quays to which the vessels make fast, and sheds are usually present for the storage of goods, with cranes for loading or unloading heavy articles, and rails are frequently laid along their sides to aid in removal of goods. In many ports of the world, such as that of New York and those of the Mediterranean, the rise and fall of the tides is so small as not to interfere with the loading or unloading of goods, and wet docks are not needed; but in the North of Europe, the tides are so considerable that every first-class mercantile port requires one or more of these valuable aids to commerce. No docks in the world are on so splendid a scale as those of London, Liverpool, and Birkenhead. These, being surrounded by substantial stone walls, provided with strong gates, guarded by police, and otherwise costly in structure and management, need a considerable income for their support; and this is obtained from dues or rates imposed on the vessels that use them.—*London Docks.* London is provided with a number of extensive docks, fed with water from the Thames, whose tidal rise is about 20 feet. Of these the most important are the Royal Albert and Victoria docks, which extend in a continuous line across a neck of land separating the Bugsby and Gallion reaches of the Thames. The Victoria main dock has an inner basin of 74 acres, with 16 acres of tidal basin. It is 1,050 feet in width, with jetties on the south side which add to its berth-room. The Royal Albert extension of this dock, opened in 1880, has an area of 70 acres. It is 6,500 feet long by 490 feet wide, and has a depth of 30 feet at high water. Opening from these docks are the dry docks. The dock walls are built wholly of concrete, and they are lighted by electricity. The earliest of the London docks, the Import and Export docks, with their later addition, the South dock, cover in all over 80 acres. The East India docks, 27 acres in extent, first intended exclusively for ships in the East India trade, now belong to the same company as the West India docks, and have magnificent warehouses for teas, drugs, spices, and other products of the regions indicated by their names. There are in addition the London, the St. Katharine, and the Tilbury docks—the latter 26 miles below London Bridge, and with the deepest water of any in the United Kingdom. The tidal basin, of 19½ acres, is 46 feet deep at high water, and the

main basin, of 57 acres, is 38 feet deep.—*Liverpool Docks.* The great rise and fall of the Mersey at Liverpool (21 feet at neap and 31 at spring tides) render dockage indispensable, and there are here and at Birkenhead the largest and most extensive docks in the world. These docks have, on the river side, a sea wall 6¼ miles long, the docks here being made in the river itself, by enclosure within this wall of a portion of the beach, which is afterward excavated to the proper depth. This great sea wall is 11 feet thick and 40 feet high, and encloses more than 30 docks, with a total area of 343 acres and more than 24 miles of quay space. These docks, while usually having a separate entrance from the Mersey, communicate with each other, so that ships may pass from one to another without the necessity of returning to the river through the locks. The new North docks, of 82 acres, are estimated to have cost \$20,000,000. The warehouses connected with the Liverpool docks cover 33 acres, with 94 acres additional of sheds, their total cost having been nearly \$20,000,000.—*Birkenhead*, on the Mersey opposite Liverpool, has 165 acres of docks, with more than 10 miles of quay space. The dry or graving docks connected with this system number 25. The extensive system of docks connected with the Canada basin has ingenious and extensive sluice arrangements to keep the river entrances free from silt, the sluices being capable of discharging 1,750,000 cubic feet of water per minute, the speed of the outward current being 10 miles an hour. Steam dredging machines are employed to keep the inner basins free from mud.—There are numerous other docks in the British Islands, the port of Cardiff being celebrated for its large docks. The spring tides here rise 37½ feet, and various docks have been constructed, which are principally used in loading coal. On the Continent there are spacious docks at Havre, where the tides rise from 20 to 27 feet; at Antwerp, where docks have been constructed on a great scale; at Amsterdam, Bremen, and other ports. The tidal basins of docks, of which we have spoken, differ from the inner basin in having but a single pair of sea

of wood, but having a solid concrete backing. The floating dock is used afloat, usually in the still waters of quiet harbor. Stationary dry docks may open either into a wet dock or into tide water. The former is preferable, because that arrangement permits the passage of vessels in and out at any stage of the tide, and also keeps a more nearly equal pressure on the gates.—*Masonry Docks.* These are built of brick or solid blocks of stone firmly set in hydraulic masonry, everything being water-tight. The entrance is sometimes closed by means of folding gates, pointing outward, but now more frequently by the use of a caisson, or floating gate. The device resembles, in shape, a ship's hull, with a double bow, its lines following the contour of the bottom and sloping sides of the dock, while its deck is at the height of the dock walls; it is made of iron and ballasted with rocks and water, the latter being permitted to run in when it is desired to sink the caisson into its place, and being pumped out to raise the caisson so that it may be floated out of the dock. Transverse sluice-ways, controlled by valves, are employed to flood the dock when it is desired to float the ship after examination and repair. (See Figs. 2817, 2818). In ancient times, where tides were insignificant, vessels were hauled up on the beach and "careened" for examination. Where the tide was sufficient they were grounded in high water, so as to be exposed and repaired at low tide. The "heaving-down" process, sometimes employed, consisted in attaching ropes to the head of the vessel's masts and their mooring rings of the quay and by their aid hauling her over into nearly a horizontal position, the process being aided by a shifting of ballast. In this dangerous operation the *Royal George* capsized and sunk at Spithead in 1782, with 600 persons on board. For modern large vessels the dry dock is indispensable. When the rise of the tide is inconsiderable, the bottom of a dry dock, unless intended for very small vessels, is below the low tide level, and must be emptied by pumping, steam pumps, with a well and water channels leading to it, being provided. The floor of the

Fig. 2818.—CAISSON IN POSITION.

gates, which are kept open till half tide, so that inward-bound vessels may run into them up to that time, and be similarly passed out, entering the inner basin at high water by means of the lock. These tidal basins are large enough to admit much additional traffic.—*Tidal Docks.* No particular description need be given of this class of docks. They are merely basins surrounded by walls, and open to the free flow of the tides. They are convenient where the tidal rise is small, and are sometimes deep enough to keep vessels afloat at low water; but if the tides have greater range, they have usually the inconvenience of grounding the vessel at low water, and, from the free entrance of often turbid water, are liable to silt up rapidly. To overcome this a method called "scouring" is used, an inner reservoir of water being opened at low tide, and water permitted to flow out with a sudden gush. This process is employed at Boulogne and elsewhere. There are tidal docks on a large scale at Hamburg and Rotterdam, and these cities, with Antwerp, have large accommodations on the river quays. In the U. S., as we have said, the low tides render this form of dock sufficient.

Dry Docks. Dry docks are indispensable in all first-class ports for the examination and repair of those portions of a vessel's hull that are ordinarily below the water line. There are two main classes: the *stationary* dock and the *floating* dock. The first is divided into two principal varieties, those built of solid masonry, and the "Simpson," or "timber," dock, constructed chiefly

of wood, but having a solid concrete backing. The floating dock is used afloat, usually in the still waters of quiet harbor. Stationary dry docks may open either into a wet dock or into tide water. The former is preferable, because that arrangement permits the passage of vessels in and out at any stage of the tide, and also keeps a more nearly equal pressure on the gates.—*Masonry Docks.* These are built of brick or solid blocks of stone firmly set in hydraulic masonry, everything being water-tight. The entrance is sometimes closed by means of folding gates, pointing outward, but now more frequently by the use of a caisson, or floating gate. The device resembles, in shape, a ship's hull, with a double bow, its lines following the contour of the bottom and sloping sides of the dock, while its deck is at the height of the dock walls; it is made of iron and ballasted with rocks and water, the latter being permitted to run in when it is desired to sink the caisson into its place, and being pumped out to raise the caisson so that it may be floated out of the dock. Transverse sluice-ways, controlled by valves, are employed to flood the dock when it is desired to float the ship after examination and repair. (See Figs. 2817, 2818). In ancient times, where tides were insignificant, vessels were hauled up on the beach and "careened" for examination. Where the tide was sufficient they were grounded in high water, so as to be exposed and repaired at low tide. The "heaving-down" process, sometimes employed, consisted in attaching ropes to the head of the vessel's masts and their mooring rings of the quay and by their aid hauling her over into nearly a horizontal position, the process being aided by a shifting of ballast. In this dangerous operation the *Royal George* capsized and sunk at Spithead in 1782, with 600 persons on board. For modern large vessels the dry dock is indispensable. When the rise of the tide is inconsiderable, the bottom of a dry dock, unless intended for very small vessels, is below the low tide level, and must be emptied by pumping, steam pumps, with a well and water channels leading to it, being provided. The floor of the dock is nearly level. The keel of the vessel rests up wooden blocks attached to the floor, high enough to permit the shipwrights to get under the vessel's bottom. Movable shoring pieces are put along the sides, so as to hold the vessel upright, and blocks are fitted in under the bilges as soon as the dock is emptied of water. The sides of the dock are generally constructed in steel called altars, for the purpose of fixing the lower ends of the shores, and also to aid in supporting scaffolding for the workmen. The U. S. dry dock at Brooklyn was formerly looked upon as one of the finest masonry docks in the world. It is closed by gates supported on friction rollers, and also by a caisson. The latter lies outside the gates, and is used to relieve the strain on them, or, in case they need repair. The engine and pumps at the dock are of sufficient power to empty it of water in 10 hours. The main chamber of the dock is 307 feet long and 98 wide, while the use of the caisson gives an additional length of 52 feet. The walls are 36 feet high and the sills 26 feet below high water. The U. S. dock at Boston, completed in 1833, is 253 feet long and wide, and that at Portsmouth, Va., resembles it closely in size and construction. The most recent of these, that at Mare Island, Cal., has been many years in building, its cost being about \$3,000,000. In addition to these and other government constructions, the U. S. has many dry docks for mercantile use. Passing to Europe we find 25 of these at Liverpool, with a total length of 12,489 feet of floor, some of them being from 600 to

feet long. There are still larger ones at Birkenhead, the longest being 930 feet, with an entrance width of 60 feet. At Portsmouth is a double dock 644 feet long by 80 wide, and at Brest, France, one 720 feet long by 92 wide. On the Great Lakes of the U. S. the largest dry dock is at Detroit.—*Timber Docks.* The "Simpson" dry dock is built chiefly of timber. Its inventor claims for it greater freedom from water, improved facility of access and more light and air for workmen (on account of the great breadth at the coping), and less cost in construction. A considerable number of this pattern have been constructed on the Atlantic coast and elsewhere. The first two built at the Brooklyn Navy Yard cost \$1,283,356, and the one at League Island Navy Yard, Philadelphia, cost \$558,700. The latter is 500 feet long, 130 feet wide at the top and 50 at the bottom. There is one at Newport News, Va., 600 feet long by 130 feet at the top—a superb structure in an ideal location. In these docks, on account of the wide spread of the abutments, it is necessary to raise the caissons only a few inches before they can be floated aside. On the outer edge of the groove is a strip of rubber, which serves to make a water-tight joint. The weight of the caisson at League Island is about 120 tons. The new U. S. dock at Port Royal, S. C., is one of the finest on our Atlantic coast, having a length of 500 feet by 120 feet wide on top. The new government dock, No. 3, at the Brooklyn Navy Yard has a total length of 670 feet over all, or 628 feet, 8 inches on the floor; width of floor, 64 feet, 4 inches; at top 151 feet. A cross-section of this fine structure is shown in Fig. 2819. The concrete bed is 3 feet thick, and the layer of puddle worked in back of the

tional dock, to preserve stability in rising and sinking. The walls rise vertically on this outside surface, but slope inwardly, conforming in a measure to the shape of a ship's sides. They thus afford the means of shoring up the ship, as in a stationary dock. The engine-house, pumps, and working platform are on the top. Gates are sometimes used at the ends to inclose the dock, employed when vessels of great weight are lifted. In addition to the balance docks above mentioned, there are others at New York, Charleston, Savannah, Mobile and New Orleans. Rennie's patent iron floating dock is used at Cartagena and Ferrol, Spain, that at Cartagena being 320 feet long 105 broad outside, 79 inside, and 35½ feet deep inside. In general character it resembles Gilbert's balance dock, and is essentially an oblong, rectangular trough with open ends. The wall and bottom are hollow and are divided into several chambers, the side walls acting as floats to prevent too rapid sinking. Water is

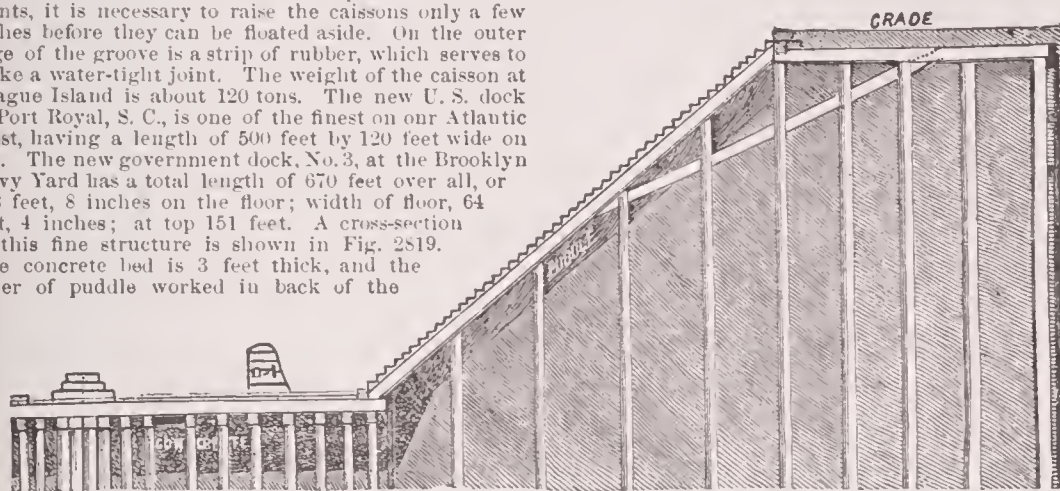

Fig. 2819.—HALF CROSS-SECTION OF A TIMBER DRY DOCK.

altars is 2 feet in thickness. Ten thousand piles and 3,000,000 feet of board timber were used in the construction, which required the excavation of 153,556 cubic yards of soil and stone. Of almost equal dimensions and importance is the new government dock at Port Orchard, Puget Sound, Wash., begun 1893 and finished in less than 3 years. This dock has an extreme length of 675 feet on the coping, and 579 feet on the floor; being 67 feet wide on the floor, and having 2 feet more water over the sills than even the great Brooklyn dock just described. The Port Orchard dock is by far the largest on our Pacific coast, and takes rank as one of the great *D.* of the world. A good view of its interior is shown by Fig. 2820. It cost about \$600,000, while the Esquimault dock, near Victoria, B. C., which is 200 feet shorter, and the Mare Island dock, 140 feet shorter, cost some \$3,000,000 each, these being of masonry.—*Floating Docks* were first built of timber, in the form of a large box with a flap door falling down on strong hinges at one end. Docks of this kind are moored in still and shallow water, whose depth is just sufficient to allow the vessel to flow into them as they rest on the bottom. Then the flap door is raised and closed and the water pumped out. Floating docks of timber cannot be used in deep water, on account of their want of stability. Not until iron replaced wood in their construction were floating docks made that were capable of working in deep water and of holding the largest ships. Mr. Thompson, of Edinburgh, designed, in 1859, a great iron floating dry dock for the port of Sourabaya, Java, of which all the pieces, more than 75,000, were made from drawings, and taken out separately. When fitted in place they formed a dock with five great water-tight compartments, which were divided longitudinally by partitions into five separate divisions, so that there were in all 25 water-tight compartments, each of which could be filled with water or emptied at will. Those were all under the control of powerful steam pumps, so that the dock could readily be placed at any desired level, or heeled over to one side, if required, by filling the compartments on one side and emptying those on the other. The floating dock constructed by the French government at Saigon, Cochinchina, was put together the same way. Its performance was most satisfactory, it lifting the 70-gun frigate *Persévérante* high and dry out of the water. The iron floating dock at Ireland Island, Bermuda, was built in England and towed across the ocean in 1869. It is 381 feet long by 124 broad, and has a lifting power of 16,700 tons. Of U. S. floating docks may be mentioned the sectional dock at Philadelphia, which is made in nine sections of varying width, each consisting of a pontoon or tank, 105 feet long 30 or 32 wide and 11 deep. They form in all a floor over 200 feet long and 105 wide. At the ends of each section are floats which are raised and lowered by machinery, for the purpose of depressing or lifting the main tank. In using this dock a sufficient number of sections are connected to give the length required. The lifting power is nearly 6,000 tons. A similar dock is used in the San Francisco Navy Yard. The *balance floating dock*, invented by Mr. John S. Gilbert, of New York, in use in the navy yards of Portsmouth, Va., and Pensacola, Fla., is like the sectional dock, constructed of timber. It consists of a pontoon bottom and two side walls, with displacement sufficient to carry the whole weight of the dock and the vessel to be raised. The side walls are hollow, and serve, like the floats in the sec-

admitted into the hollow compartments, the dock sunk deep enough to admit the vessel, then raised again by pumping out the water. This dock has lifted the Spanish iron-clad *Nunoncia*, weighing 5,600 tons, and supported it 80 days without straining the dock.—*Clarke's hydraulic lift dock*, at the Victoria docks, London, is a shallow pontoon filled with water and resting between two rows of cast-iron columns. Being sunk by the weight of water, the vessel is floated in and shored in place, and the pontoon is then raised by hydraulic pumps which act upon it by chains. A fine structure of this pattern has been built at the Union Iron Works, South San Francisco, Cal., which has a length on the floor of 436 feet, 6 inches, and a width of 65 feet, 7 inches; the max-

Fig. 2820.—U. S. DRY DOCK AT PORT ORCHARD, PUGET SOUND—INTERIOR VIEW.

imum lift is 29 feet, and a vessel weighing 6,000 tons can be handled without danger. This form of dry dock is the least expensive and easiest of construction; but the timber dock has been the most generally advocated in recent years, being considered as effective as one of masonry, sufficiently durable, susceptible of more rapid construction, and infinitely cheaper in first cost. Quite lately, however, some doubt has been thrown upon the stability of very large docks of the "Simpson" pattern, on account of the serious leak developed in the great Brooklyn dock No. 3, in 1897; and the advocates of the solid masonry dock have recently reasserted, with much vigor, the superiority and ultimate economy of that method of construction.

Dodge, EBENEZER, D.D., LL.D., a Baptist divine and scholar, born at Salem, Mass., April 22, 1819. Graduated from Brown University and Newton Theological Institution; became instructor in Hebrew at Covington

Theological Institution (1846); pastor in New Hampton, N. H. (1847); and subsequently minister of a church in New London, Conn. In 1853 he became professor in the theological department, and afterward president, of Madison University, Hamilton, N. Y. He was the author of: *Evidences of Christianity*; *Christian Theology*, &c. Died Jan. 5, 1890.

Dodge, GRENVILLE MELLE, LL.D., soldier, born in Mass., April 22, 1831; graduated at a military academy in Norwich, Vt., and began his career as an engineer in a railroad survey along the Platte river. He entered the Federal army at the outbreak of the Civil War; commanded a brigade of Western troops at the battle of Pea Ridge, Mo. (March 6-8, 1862); became major-general of volunteers (June, 1864), and commanded a corps of Sherman's army in Georgia (May-Sept., 1864); in December of same year succeeded Rosecrans as commander of the department of Missouri; was member of Congress from Iowa (1867-69), and still resides in that State. Was chief marshal of the great parade in New York city on the occasion of the dedication of the Grant mausoleum, April 27, 1897.

Dodge, MARY ABIGAIL (GAIL HAMILTON), author, born in Hamilton, Mass., about 1838. For some years she was instructor in physical science at the High School of Hartford, Conn., but was subsequently a governess in the family of Dr. Gamaliel Bailey, of Washington, D. C., at which time she became a contributor to the *National Era*, a weekly anti-slavery paper, published by Dr. Bailey. She wrote also for the *Atlantic Monthly*, *Harper's Bazaar*, *North American Review*, and other periodicals, and was one of the editors of *Our Young Folks*. Her works include: *Gala Days*; *Summer Rest*; *Skirmishes and Sketches*; *Battle of the Books*, and a number of others. Gail Hamilton was one who spoke to the point on the questions of the day, and was true to her convictions whether they pleased the multitude or not. She possessed a vein of sarcastic humor that added to the popularity of her books. Died Aug. 17, 1896.

Dodge, MARY MAPES, author, born in New York city in 1838. She married William D., but being early left a widow, she took up literature, and has devoted her pen largely to writing for children. From its start, in 1873, she has edited *St. Nicholas*, and contributed at the same time to other periodicals. Her best known work, *Hans Brinker, or the Silver Skates*, has been translated into many languages. *Donald and Dorothy* (1883) has also been widely read. In addition to these she has written *Irrington Stories*; and several poems, including *Rhymes and Jingles* (1874); *Theophilus and Others* (1876); *Along the Way* (1879).

Dodge, WILLIAM EARLE, merchant and philanthropist, born in Hartford, Conn., Sept. 4, 1805. He early entered into business in New York and became an extensive importer and manufacturer. He was a member of the Peace Convention of 1861; Member of Congress (1866-67); an active member of many religious and benevolent societies, and principal founder of the Syrian Protestant College at Beirut. Died Feb. 9, 1883, and a statue

was erected to his memory in New York in 1885.

Dodge City, in Kansas, a city, the cap. of Ford co., on A., T. & S. F. R.R., 302 m. W.S.W. of Topeka. Pop. (1897) about 2,500.

Dodg'son, CHARLES LUTWIDGE, M.A., author, born in England, about 1833; educated at Christ College, Oxford, graduating with honor; ordained a minister (1861), held the position of mathematical lecturer at Christ Church College (1875-81); the author of *The Game of Logic*; *Mathematica Curiosa*; *Euclid and his Modern Rivals*; has also published (under the pseudonym of LEWIS CARROLL): *Alice's Adventures in Wonderland*; *Through the Looking Glass*; *Sylvie and Bruno*.

Dog'gery, n. A low drinking-place; a grog-shop; a squalid or questionable resort. (*Slang*)—Anything mean, low, or currish; a humbug; a cheat.

Dohrn, ANTON, zoölogist, born at Stettin, Prussia, Dec. 29, 1840; studied in several universities, making a

specialty of natural sciences. After completing his university life at Jena, he devoted himself to the study of the crustaceans of the English coast and the shores of the Mediterranean. The zoological laboratory of Naples, which was founded by *D.*, has become one of the most famous of its kind in the world. He is the author of *Der Ursprung der Wirbelthiere*, and *Studien zur Ungeschichte des Wirbelthierkörpers*.

Dolbear. AMOS EMERSON, Ph.D., physicist, born in Norwich Conn., Nov. 10, 1837. His boyhood was spent in Newport, R. I., and on a farm in southern N. H.; but, being mechanically inclined, he learned the trade of machinist in Worcester and Taunton, Mass., and worked at it till 1863, also teaching school a while in Mo. He then attended Wesleyan College, in Delaware, O., graduating in 1866. Did post-graduate work and teaching at the University of Michigan, obtaining the degree of M. E. (1867), which institution also honored him with Ph.D. (1883). He taught natural science at the University of Kentucky, Lexington (1867-68); at Bethany (West Va.) College (1868-74), and part of this time was mayor of the city. Since 1874 he has been professor of physics and astronomy at Tufts College, Mass. He has made a number of important inventions, including the electric gyroscope (1867); tuning forks for the exhibition of Sissajou's curves (1872), and the opeidoscope for the exhibition of voice vibrations. In 1873 he began to study the transmission of sound by electricity, and has perfected and patented the speaking telephone, magnetic and static. Other of his inventions are the air-core cable for telephonic work; an electro-dynamometer, &c. His books include *The Art of Projecting*; *The Telephone*; *Matter, Ether, and Motion*; a text book on *Natural Philosophy*; *Modes of Motion*; and he has contributed more than a hundred articles to scientific and other journals.

Dole. SANFORD BALLARD, jurist and statesman, born in Honolulu, Hawaii, in 1844. His father was an American missionary, and the son received his early education at Puhalan College; studied for a year in Williams College, Mass., read law and was admitted to the bar in Boston. From 1870 till 1877 he practiced in Honolulu, and was appointed judge of the Supreme Court of Hawaii. When Hawaii was declared a republic (July 4, 1894), he became its chief executive, having previously been president of the provisional government.

Dollinger. JOHANN JOSEPH IGNAZ, an eminent German theologian and historian, born at Bamberg, Bavaria, 1799; assumed priest's orders in 1822, and in 1826 was appointed lecturer on Church History to the University of Munich, the substance of his labors in this respect appearing in 1828 in his *Manual of the History of the Church*, and in a *Treatise on the History of the Church* (1838). In 1845 he was returned by the University of Munich to the Bavarian Parliament, and in 1851 was a delegate to that of Frankfurt, where he advocated and voted for the absolute disunion of Church and State. In 1861 he lectured in favor of the abandonment of the Pope's temporal power, and afterward obtained a world-wide notoriety by his strenuous and persistent antagonism to the decrees of the Council of the Vatican. More especially was this manifested on the occasion of the convocation of the Ecumenical Council held at Rome, 1870-71, to discuss the doctrine of Papal Infallibility on questions of faith and morals. After the adoption of this dogma as a recognized tenet of the Roman Catholic faith, Dr. *D.* became the acknowledged leader of the so-called "Old Catholic" party, and one of the most popular and influential men in Germany. On Feb. 29, 1872, he was elected rector of Munich University, and on April 18th following was formally excommunicated. In 1887 his *History of Liberal Progress in the Catholic Church* appeared, and in 1888-89, *Academical Discourses*. His 90th birthday was celebrated in Munich with great éclat. Died Jan. 10, 1890.

Dolly Var'den. One of the characters in Dickens' novel, *Barnaby Rudge*.—A costume of fancy-figured stuff, very showy but by no means tasteful, which was in vogue about 1872. By extension, applied to any costume displaying large, flowered patterns in gay colors, and occasionally (humorous) to the person wearing same.

Dolph (dolf). JOSEPH N., lawyer and statesman, was born at Watkins, N. Y., in 1835; removed to Oregon (1862), and was U. S. District Attorney for that State (1864), under Lincoln's administration; State Senator, 1866-72-74; elected U. S. Senator (1882), and served two full terms; received the Republican caucus nomination (1894) for a third term, but failed of reelection; afterward practiced the law in Portland, where he died, March 10, 1897.

Dombrowsky (dôm-brôv-skê). JAROSLAV, soldier, born at Cracow, Poland, in 1826. He entered the Russian army but was obliged to leave the country on account of having taken part in the Polish insurrection; later the accusation of turning traitor to the Poles was brought against him. In the beginning of the Franco-German War he formed a Polish legion, and in 1871 received the command of the insurgent troops at Asnières, and on May 9 of the same year succeeded Rossel as commander-in-chief of all the forces of the Paris Commune. Died May 23, 1871.

Domett. ALFRED, poet, born in Surrey, Eng., May 20, 1811; educated at St. John's College, Cambridge. After several years of travel in America and Europe, he was admitted to the bar (1841), but emigrated to New Zealand the year following. He held important offices in the colonial government, and for his services was created a C. M. G., but retired from public life and devoted himself to literature. His prose writings comprise a narrative of the *Wairan Massacre* and works on

the laws and politics of New Zealand. Among his poetical writings are: *Flotsam and Jetsam*, *Poems Old and New*; *Venice*; *Ranolph and Amolira*, and *A South-Sea Day-Dream*.

Domeyko. IGNATIUS, scientist, born at Niedzviadka, government of Minsk, Lithuania, July 31, 1802; studied at the University of Wilna, but becoming involved in the Polish revolt of 1830, he was obliged to leave the country, and fled to Paris. There he attended the School of Mines. He entered the service of the Government of Chile, where he was a leader in scientific research; introduced advanced methods of mining, and did much toward developing the riches of that country. He became the professor of mineralogy and geology in the University of Santiago, and in 1857 was appointed rector. He was author of *La Arancania y Sus Habitantes*, and of a volume of travels in Chile, in the Polish language, besides a great number of papers on geology, mineralogy, meteorology, &c. Died in Santiago, Jan. 23, 1889.

Dominion of Canada. See CANADA, DOMINION OF.
Donaldson. EDWARD, rear admiral U. S. Navy, born in Baltimore, Md., Nov. 17, 1816. Began his career as a midshipman. In the Civil War he commanded the steam gunboat *Scioto* at the passage of Forts Jackson and St. Philip and capture of New Orleans in 1862, and at the passage of the Vicksburg batteries in the same year; also commanded the steamer *Seminole* at the battle of Mobile Bay. Died May 15, 1889.

Donaldson. JAMES LOWRY, soldier, born March 17, 1814, in Baltimore, Md. Graduated at West Point (1836); served in the Florida War, in the war with Mexico and in the Civil War. He was made brigadier-general Sept. 17, 1864, for distinguished services; major-general of volunteers (1865); retired March 15, 1869. He was the author of *Sergeant Atkins*, a tale of adventures in the Florida War. Died in Baltimore, Nov. 4, 1885.

Donaldson. JOHN WILLIAM, D.D., a biblical critic and a pioneer in philology, was born in London, Eng., June 7, 1811. He received his education at London University and Trinity College, Cambridge, graduating in 1834. He devoted himself to philology, and five years after his degree published *The New Cratylus*, which brought fame to the young man. In 1841 he was appointed head master of King Edward's School at Bury St. Edmunds, and subsequently resided as tutor at Cambridge. In 1844 appeared his *Varronianus*; in 1854 his work entitled *Jasher, or Fragments of Oriental Hebrew Songs Inserted in the Masoretic Text of the Old Testament*, which was the cause of much discussion. This work he defended in his *Christian Orthodoxy Reconciled with the Conclusions of Modern Biblical Learning*. He also published *The Theater of the Greeks*; grammars of Hebrew, Greek and Latin, and at the time of his death, which occurred in London, Feb. 10, 1861, he was engaged in superintending the compilation of a Greek lexicon.

Don'elson. ANDREW JACKSON, LL.D., politician and diplomat, born Aug. 25, 1800, near Nashville, Tenn.; graduated at West Point in 1820; entered the army in 1821 as lieutenant of engineers; resigned in 1822, and studied law; engaged in the raising of cotton near Nashville. He occupied several important official positions; was private secretary to President Jackson (1829-30); chargé d'affairs to Texas (1844-5); minister plenipotentiary to Prussia, and later to the federal government of Germany (1846-49). Was editor of the *Washington Union* (1851-2). Was candidate of the American party for vice-president (1856), and being defeated he retired from public life. Died at Memphis, June 26, 1871.

Don'iphan. ALEXANDER WILLIAM, an American general, born in Mason co., Ky., July 9, 1808; graduated at Augusta College, and studied law. Began the practice of his profession in Lexington, Mo. (1830), and acquired distinction. In 1836 he was elected to the Missouri Legislature, re-elected in 1840 and again in 1854. As a member of the State militia, he had charge of the First Brigade when it was called out in 1838 to enforce the law against the Mormons. He also served in the Mexican War. The regiment of which he was colonel, with infantry, &c., formed the Army of the West, under command of Col. S. W. Kearney. Sept. 25, 1846, Gen. Kearney started on a march to California, and ordered *D.* to march to Chihuahua and report to Gen. Wool. After a journey across a treeless desert he reached Chihuahua to find that Gen. Wool had left that place to reinforce Gen. Taylor. In front of Chihuahua he encountered an army of 4,000 men, completely routed them after a few hours' fighting, and entered the town in triumph. The term of enlistment of his regiment expired May 21, 1847, and on their way home a public reception was tendered them in St. Louis. By this march the extent and wealth of the U. S. was largely increased, New Mexico and the other territories annexed being rich in the precious metals. Col. *D.* was one of the commissioners of the Peace Convention which met at Washington previous to the Civil War, a strife which it vainly sought to avert. He died in 1887.

Donnelly. IGNATIUS, politician and writer, born in Philadelphia, Nov. 3, 1831. He has several times represented Minnesota in Congress, having resided in that State since 1856. He is the author of *Atlantis* (1882); *Ragnarok* (1883), and in *The Great Cryptogram* (1888) claims the discovery of a word-cipher in Shakespeare's plays which transfers their authorship to Francis Bacon. *D.* has succeeded in keeping his name prominently before the public by the interesting pseudoscience of his works. His Shakespeare cipher is one of the most extraordinary achievements in modern literature.

Doo. GEORGE THOMAS, historical engraver, born in the parish of Christ Church, Surrey, Eng., Jan. 6, 1800. An English line engraver he ranks among the best of this century. He began the practice of engraving at a early age, working in London, but afterward studied under Suisse in Paris. In 1851 he was elected a Fellow of the Royal Society and in 1857 was made an Academician. He was also chairman of the Engravings Committee of the London International Exhibition of 1862. His plate entitled *Nature*, after Lawrence, ranks as his masterpiece. Among other famous plates are: *King Preaching*, after Wilkie, and *Italian Pilgrims Coming in Sight of Rome*, after Eastlake. For a short period he painted portraits in oils. His *Raising of Lazarus*, taken from the painting of Sebastian del Piombo, occupied in the engraving a period of eight years. D. Nov. 13, 1880.

D'Ooge. MARTIN LUTHER, philologist, born July 1, 1839, at Zonnemaire, province of Zealand, Netherlands. He received from Leipsic the degree of Ph.D., and from the University of Michigan that of LL.D. He became principal of Ann Arbor High School and subsequently professor of Greek in the University of Michigan; president of the American Philological Association, and director of the American School of Classical Studies at Athens. His works include editions of *Demosthenes O the Crown* and the *Antigone of Sophocles*.

Doolittle. THEODORE SANFORD, D.D., LL.D., educator and minister in the Reformed (Dutch) Church, born in Ovid, N. Y., Nov. 30, 1834. He graduated at Rutgers College and the Theological Seminary at New Brunswick, N. J. In 1862 he became pastor of a church in Flatlands, N. Y., and in 1864 was appointed professor of rhetoric, logic and metaphysics in Rutgers College and vice-president in 1890. From 1873 till his death he was editor of the *Christian at Work*, and a constant contributor to newspapers and magazines. He was also lecturer on art and other subjects, and published the *History of Rutgers College*, and *Syllables of Architecture*. Died in New Brunswick, April 18, 1893.

Dora d'Is'tria. the literary pseudonym of HELEN GHUKA, Princess Koltzoff Massalsky, a Roumania writer, born at Bucharest, Jan. 22, 1829. Her marriage to Prince Koltzoff Massalsky proved unfortunate, and she subsequently divided her time between Russia, Italy, and Switzerland. Her home education had made her thoroughly conversant with classical literature and languages, and afterward by extensive travel she mastered the principal European languages and literature. Her principal works are: *Monastic Life in the Orient Church*; *The Horses of Roumania*; *Women in the Orient*; *The Poetry of the Ottomans*. Several scientific societies elected her to membership.

Doran. JOHN, Ph.D., was born in London, March 1, 1807; studied with his father and at a private school in London. He early showed literary talent. His play *The Wandering Jew* (1822), was performed at the Surrey Theater when *D.* was but 15 years of age. At 20 he became editor of the *Literary Chronicle*. From his knowledge of the French language he was sought as tutor for the sons of noblemen, first acting in this capacity to George Murray, afterward Duke of Athol. His numerous works show great literary industry. One of the most interesting is: *A Lady of the 16th Century*, which was an account of Lady Montague at the "blue stockings" of her day. Some of his other works are: *Memories of Our Great Towns*; *Knights of Their Days*, and *History of Court Fools*. He was editor of the *Church and State Gazette* in 1841-42, and at his death of *Notes and Queries*. Died Jan. 25, 1878.

Dorchester. DANIEL, D.D., Methodist Episcopal clergyman, born at Duxbury, Mass., March 11, 1822. Educated at Norwich Academy and Wesleyan University. Has served as pastor and presiding elder, also as member of the Connecticut Senate and Massachusetts House of Representatives, and as commissioner of idioity in Connecticut. He was appointed superintendent of Indian Schools for the U. S. (1889); and has published *Problems of Religious Progress*; *Liquor Problem in the Ages*; *Romanism versus The Public School System*; and *Christianity in the United States*.

Doremus. ROBERT OGDEN, M.D., LL.D., chemist, born in New York, Jan. 11, 1829. He graduated from the University of New York in 1842, having been previously a student at Columbia College. He went to Europe in 1847 to continue the study of chemistry, branch to which he had given special attention. On his return he graduated from the medical department of the New York University in 1850, and was one of the founders of the New York Medical College. He was made professor of chemistry and toxicology in the Bellevue Hospital Medical College, and subsequently was appointed to a similar position in the College of the City of New York. He gave much study to applied chemistry; patented several processes and lectured widely on his specialties.

Doremus. SARAH PLATT HAINES, philanthropist, born in New York, Aug. 3, 1802. In 1821 she was married Thomas C. *D.* In her labors as a philanthropist she gave assistance to many projects, among them the Greek Relief Society, Grande Ligne Mission to the French peasantry of Canada, Nursery and Child's Hospital, of which she was vice-president, and for five years she labored for the cause of foreign missions. The Woman's Union Missionary Society, which was organized in New York in 1860, is her memorial in this direction. During the Civil War she was untiring in her care of and devotion to the sick and wounded soldiers. Died in New York city, Jan. 29, 1877.

Dorn. JOHANN ALBRECHT BERNHARD, German orientalist, born May 11, 1805, at Schenefeld, Saxe-Coburg, studied at the Universities of Halle and Leipzig, and

graduated in divinity. In 1829 he received the appointment of ordinary professor of oriental languages at the Russian University of Charkow, and afterward became professor of history and of Asiatic geography at the Oriental Institute; also keeper of the Imperial Library and director of the Asiatic Museum; chosen a member of the Imperial Academy of Sciences and the French Academy of Inscriptions. He made a journey to the Caucasus in 1860-61 and collected a number of inscriptions of great importance in the history of the Caucasian dialects. The results of his journey are embodied in a work entitled *Caspia, Invasion of the Ancient Russians in Tabaristan*. He published a number of translations of oriental works on history and geography, including *Grammatical Observations upon the Language of the Afghans*, and *History of the Afghans*. Died at St. Petersburg, May 18, 1881.

Dorr, THOMAS WILSON, lawyer and politician; leader of the so-called "Dorr's Rebellion" in Rhode Island. He was born in Providence, Nov. 5, 1805, graduated at Harvard (1823); studied law with Chancellor Keut in New York, and returned to Providence to practice. He was member of Assembly (1833-37), and an earnest advocate of the extension of the suffrage, which, under the old charter, was restricted to holders of real estate and their eldest sons. D. organized a "suffrage party," which framed a new constitution, submitted it to vote of the people, and it was declared to have received a majority. D. was chosen governor (1852) by the "suffrage party"; Samuel W. King was elected under the old charter and was finally sustained. D. was arrested, convicted of high treason, and sentenced to imprisonment for life. He was, however, released in 1847 and restored to civil rights in 1851. Died at Providence, Dec. 27, 1854.

Dorsey, JAMES OWEN, anthropologist; born in Baltimore, Md., Oct. 31, 1848; was a student of the Theological Seminary of Virginia. In 1871, he was ordained a deacon of the Protestant Episcopal Church and went to Dakota as a missionary, working among the Ponka Indians. He was subsequently engaged in linguistic and sociologic work for the Bureau of Ethnology, in Washington, D. C., (1878-1895). He contributed to the *American Antiquarian*, *Journal of American Folk-Lore*, &c., and was the author of *Contributions to North American Ethnology*; *Omaha and Ponka Letters*, and other works. Died in Washington, Feb. 4, 1895.

Dorstenia (dörz-tē-ne-ah). (Bot.) A genus of plants, order *Moraceæ*, associated with mulberries and figs. The genus has a flat and somewhat concave receptacle bearing numerous flowers. The staminate flowers have no perianth, but two or more stamens. The pistillate flowers are also without a perianth; the ovary is one-celled with a lateral style and bifid stigma, containing one ovule. The fruit-bearing receptacle becomes somewhat succulent. There are 36 known species. They are herbaceous plants found in tropical America. They have radical leaves which are palmate or pinnatifid, and the receptacle terminating the scape is quadrangular or rounded, or occasionally linear and forked. *D. contrayerva* and other species have a stimulant and tonic rhizome, which is used medicinally under the name of *Contrayerva root*.

Fig. 2821.—DORSTENIA CONTRAYERVA.

Dosimeter, *n.* An instrument by which small quantities of fluid are measured.

Dostoiev'ski, FEDOR MIKHAILOVITCH, novelist; born in Moscow, in 1822. His first book was entitled *Poor People*, in which he portrayed the life of the laborer and small tradesman in Russia. He was an ardent liberal, and connected himself with a club which aimed to reform governmental abuses. Suspicion falling upon the club, the members were arrested and sentenced to death, which sentence was changed to banishment to Siberia for ten years. At the expiration of eight years, D. was liberated and returned to St. Petersburg. During his incarceration his health had become broken and his future ruined. He again took up the pen and published (1861) *The Down-trodden and Oppressed*; (1867) *Evil Hearts*; and in the same year his greatest work, *Crime and Punishment*. Besides other works, he published and edited a periodical entitled *An Author's Journal*. In this he printed his own thoughts regarding the important questions concerning Russia. Died in St. Petersburg, Jan. 28, 1881. His death was deeply mourned in Russia.

Donb'eday, ABNER, soldier, born in Ballston Spa, N. Y., June 26, 1818; graduated at West Point (1842), and in the Civil War received rapid promotion, being made major-general of volunteers (1862), and brevet brigadier- and major-general U. S. Army; also colonel of infantry (1867); retired in 1873. He published *Reminiscences of Fort Sumter and Moultrie in 1860-61*, and *Chancellorsville and Gettysburg*. He was one of the garrison of Fort Sumter in 1861, and was engaged in many battles, including that of Gettysburg, where he commanded the First Corps in the first day's fight, after the death of Gen. Reynolds. Died Jan. 26, 1893.

Donble Stars. See BINARY SYSTEM.

Dougherty, DANIEL, a lawyer, born in Philadelphia, Oct. 15, 1826; began the study of law at the age of

eighteen, was admitted to the bar in 1849, and became one of the foremost forensic pleaders of his time. He nominated General Hancock as a candidate for the presidency (1880) in a speech which won for him the title of the "silver-tongued orator." At the opening of the Roman Catholic lay congress, in 1889, he delivered another brilliant oration. He was as well known in the lecture field as for his political addresses, and took a prominent part in politics, though he never held office. In the latter part of his life he lived in New York, and gave most of his time to his profession. Died Sept. 5, 1891.

Douglass, DAVID BATES, civil and military engineer, born at Pompton, New Jersey, March 21, 1790; graduated at Yale College; entered the U. S. army (1813) as second lieutenant in the corps of engineers, receiving a promotion to first lieutenant in the following year. He resigned his position in the army in 1831 and became chief engineer of the Morris Canal Company, and later of Greenwood cemetery. He was also one of the engineers of the Croton aqueduct, and was engaged in other important engineering work. From 1840 till 1844 he was president of Kenyon College, Ohio, and subsequently became professor of mathematics at Hobart College, Geneva, N. Y., retaining that position until his death, Oct. 9, 1849.

Douglass, FREDERICK, was born at Tuckahoe, near Easton, Md., in Feb., 1817; son of a white man and a negro woman who was a slave. He escaped to New Bedford, Mass., in 1838; became the agent of the Massachusetts Anti-Slavery Society, and lectured in New England and Great Britain. He subsequently held the position of assistant secretary of the commission to Santo Domingo. In 1877-81 he was U. S. marshal for the District of Columbia, and recorder of deeds in the same District in 1881-86; also U. S. minister resident and consul-general at Haiti, 1889-91. He was editor of *The North Star*, a weekly journal published at Rochester, and in 1870 edited the *New National Era*. He was the author of *Narrative of my Experience in Slavery*; *My Bondage and My Freedom*; and *Life and Times of Frederick Douglass*. Died at Washington, Feb. 20, 1895.

Don'ton, SIR HENRY, born at Lambeth, Eng., July 24, 1820. He is the head of the famous firm of Lambeth potters, having entered the works in his boyhood and carefully studied the business in all its branches, working for many years at the potter's wheel. He is noted for having been a prominent factor in the revival of art pottery, and the work produced by his firm has, since 1870, gained the admiration of critics and the highest awards of judges at all exhibitions of importance throughout the world. In the commodious studios of the firm there are over two hundred artists (many of them women), and nearly four thousand persons are employed by the firm in London and at the works in Staffordshire and Lancashire. Sir Henry has been created a Chevalier of the Legion of Honor, and in 1885 was awarded the Albert medal.

Do've, HEINRICH WILHELM, physicist, born at Liegnitz, Silesia, graduated at the University of Berlin in 1826, and was subsequently appointed a professor of physics in that institution. Besides other works on meteorology, electricity, &c., he published *Meteorologische Untersuchungen; Verbreitung der Wärme auf der Oberfläche der Erde*; and *Gesetz der Stürme*. Died April 4, 1879.

Dow, NEAL, temperance reformer, born in Portland, Me., March 20, 1804. He early became interested in the temperance cause, and while mayor of Portland (1851) drafted a bill to prohibit the manufacture and sale of intoxicating liquors. The bill was passed by a vote of 86 to 40 in the House, and 18 to 10 in the Senate, and became widely known as the "Maine Law." During the Civil War was colonel of the 13th Maine Volunteers, and afterward a brigadier-general. Died Oct. 2, 1897.

Dowden, EDWARD, LL.D., poet and critic, born at Cork, Ireland, May 3, 1843; received his education at Trinity College, Dublin, and was made professor of oratory and English literature in that college in 1867. He has published *Studies in Literature*; *Southey*; *Shakespeare, his Mind and Art*; has edited *Shakespeare's Sonnets*, and *The Correspondence of Southey and Caroline Bowles*, &c.

Downs, in *Oklahoma*, a post-village of Kingfisher co., 17 m. from Kingfisher. Pop. (1897) abt. 250.

Down'throw, *n.* Act of throwing down.—Condition of being prostrated.

(Geol.) The sinking of strata below their original level; opposed to *up throw*. See FAULT.

Doyle, A. CONAN, physician and novelist, born in Edinburgh, Scotland, in 1859; educated in England and Germany and at the University of his native city; has travelled extensively. His first literary success was *The Mystery of the Sassassa Valley*, written at the age of 19; from 1882 to 1890 he wrote a number of short stories, after which came *Micah Clarke* and *The White Company*. The success of the last-named led to his abandonment of medicine for literature, and to an even greater success with the creation of *Sherlock Holmes*. Among his latest novels is *The Tragedy of the Korosko* (1897). Dr. D. visited the U. S. in 1894.

Doyle, SIR FRANCIS HASTINGS, poet, was born at Nun-appleton, near Tadcaster, Eng., Aug. 22, 1810; studied at Eton, Christ Church, and Oxford, receiving (1831) a first class in classics. He succeeded his father as second baronet in 1839, and for ten years held the chair of poetry at Oxford, together with an All Souls fellowship. He was a man of liberal culture, broad sympathies, and genial humor, and was the author of *Reminiscences and Opinions*; *Two Destinies*; *Return of the Guards*, and other poems. Many of his verses are illustrative of the heroism of England's sons. Died June 8, 1888.

Doyle, RICHARD, illustrator and caricaturist; born in London in 1826. He illustrated for *Punch* in the early days of that paper, which continued his contributions till 1851. The title page of *Punch*, which has never been changed, is his design. As an illustrator he not only embellished works from his own pen, which include stories of fairyland, but illustrated numerous other books, such as Thackeray's *Newcomes*, &c. Died in London, Dec. 11, 1883.

Do'zy, REINHART, semitist; born at Leyden, Holland, Feb. 21, 1820. He was a graduate of the University of Leyden, and in 1850 was appointed professor of history in that institution. He is the author of works relating to the history of the Moslems in Spain and North Africa. Among his important productions are: *Historie des Musulmans d'Espagne*; *Glossaire des mots Espagnols et Portugais dérivés de l'Arabe*, &c. Died in 1883.

Drach'mann, HOLGER HENRIK HERHOLDT, Danish poet; born in Copenhagen, Oct. 9, 1846. His best work is in his lyric verse and his sketches of the life of fishermen and sailors. He traveled much and made himself intimately acquainted with the life in various countries. His industry is enormous, and he has published *Singe ved Havet*; *Tamnhuuser*; *Deroore fra Grønsen*; *Vandenes Datter*; *Der var en Gang*, and numerous others.

Drain'age Tube. (Surgery.) A very important addition to the surgical appliances which the profession owes to the eminent French surgeon, M. Chassaignac, and whose use in Great Britain was due to the advocacy of Sir Joseph Lister. They are composed of India rubber, from $\frac{1}{8}$ in. to $\frac{3}{8}$ in. diameter, perforated, and of various lengths. These tubes are particularly useful in chronic abscesses, and also in large wounds, such as those made by amputation, and in all cases where the discharge is likely to be abundant. One end is placed in communication with the seat of discharge, the other projecting beyond the skin. By aiding the discharge to escape constantly, they diminish chemical irritation from putrid accumulation, and irritation from pressure. Some surgeons prefer, in case of operation wounds, to use tubes of decalcified boue, which are gradually absorbed by the tissues and do not require a change of dressing for their removal; and in some situations, where there is a pressure from the surrounding parts, tubes of glass or of metal may be used.

Draisienne, *n.* See BICYCLE.

Drake, CHARLES DANIEL, jurist, born at Cincinnati, O., April 11, 1811. He entered the navy as a midshipman in 1827, but soon left the service to study law. Was admitted to the Ohio bar (1833), but removed to St. Louis, where he acquired eminence as a lawyer and politician. He was vice-president of the convention for revising the constitution of Missouri; elected U. S. Senator (1866), and chief justice of the U. S. Court of Claims (1871-85). He was author of *Law of Attachments*, and *Life of Dr. Daniel Drake*. Died April 1, 1892.

Drake, FRIEDRICH, an eminent German sculptor, born at Pymont, 1805; professor in the Academy of Fine Arts of Berlin and member of the Senate of that Academy. His chief works were: a *Madonna and Child*, purchased by the Empress of Russia; a *Dying Soldier with the Crown of Victory*; *The Female Grape-gatherer*; *The Eight Provinces of Prussia*, a colossal work executed in 1844 for one of the halls of the castle of Berlin; eight groups decorating the bridge of the same castle; and another, a *Warrior Crowned by Victory*. His fame rests mainly, however, on the numerous statues, busts and medallions which he executed. Died 1882.

Drake, JOSEPH RODMAN, poet, born in New York, Aug. 7, 1795. His parents dying, he was left as a boy to care for himself; studied medicine and took his degree (1815). Became intimately associated with James Fenimore Cooper and Fitz-Green Halleck. He is best known by two poems, one of considerable length, *The Culprit Fay*, written in his 22d year; and the spirited *Address to the American Flag*, which almost every school-boy recites. The last four lines are said to have been written by Halleck. D. died in his native city, Sept. 20, 1820. His collected poems were published by his daughter in 1835.

Drake, SAMUEL GARDNER, author and bibliophile, born at Pittsfield, N. H., in 1798, and for many years kept an antiquarian bookstore in Boston. His best known works are *Indian Biography* (1832), and *The Book of the Indians, or History and Biography of the Indians of North America* (1833). Died 1875.

Drama (drā'-ma), *n.* (Lit. Hist.) A poem or piece composed for the stage; a composition in dialogue, in which the action is recited and represented, and not simply related. The love of imitation is inherent in human nature; and the first evidence of intellect given by a child is his assumption of the manner and bearing of some other person. As with individuals, so with nations; and almost every ancient and modern civilized people has cultivated dramatic representation in some form. The Hindoos have a rich store of theatrical works; and in China dramatic exhibitions are highly popular. The true home of the drama, however, was in Greece, in which tragedy and comedy had a native development of their own, from which the modern drama has, in a great measure, emerged.

Tragedy. According to Aristotle, the Attic tragedy arose from the recitations of the leaders of the dithyrambic song and dance, as employed by the shepherds and peasants in their annual solemnization of the festival of Bacchus. In this the sacrifice of a goat was followed by dances and a sort of masquerade, in which fauns and satyrs were personated. It is probable that certain villages grew famous for their skill in these games, and bands of performers may have gone from place to place, or matches may have arisen between companies of sin-

gers. The dithyrambus first became an orderly and solemn ceremony in the hands of one Arion, of Lesbos, who increased the members of the chorus to fifty, and first introduced set words and music. Thespis, a native of Attica, next introduced dialogue into the pauses of the choric song, this being kept up between a single speaker and the leaders of the chorus. These performances were comic in character. Phrynichus, a disciple of Thespis, first made them serious, by choosing the solemn legends of Greece as the subjects of his dialogue and chorus. As yet, however, the performances were rather lyrical than dramatic, and it remained for Æschylus to convert the monologue and soliloquy of Phrynichus into dramatic action and dialogue. He introduced upon the boards more than one actor at the same time, and relieved the declamation of the Thespian orator by the musical performance of a chorus; he also introduced scenery. A theater, first of wood, afterward of stone, accommodated a number of regular and attentive spectators; and the principal actors dressed in personal disguise suitable to the characters personated. They also wore masks painted to represent the personages whose parts they performed. The mouth of the mask was shaped like the end of a trumpet, which, though it aided the actor's voice in filling the enormous area of the theater, must have had a ludicrous appearance. The *cothurnus*, or buskin, added to the actor's height; the enormous distance between the eyes of the auditors and the actors considerably lessening the apparent absurdities of the mask and buskin. Great trouble and expense were bestowed upon costume. When a Grecian actor personated a hero or a god, he concealed his face, increased his height, and wore a dress and mask exactly resembling the popular idea of the personage to be portrayed. The theaters were of enormous size, and built in the shape of a horse-shoe. The audience were placed on seats elevated one above another in gradation. The stage, which was on a level with the lowest row of seats, was placed at the flat end of the building. The space in the center of the theater, afterward termed "the pit," was called the orchestra, and was occasionally occupied by the chorus. Æschylus having regulated, Sophocles, Euripides, and other dramatists improved, an amusement to which the art-loving Greeks became passionately attached. During the performance of a play written by Hegemon, news was brought of the total defeat of the Grecian army before Syracuse. Among the auditors were relatives of those who had fallen, and almost every spectator, in addition to his patriotic grief, had to mourn the loss of a friend or relative. They did not quit the theater, but spreading their mantles before their faces, ordered the representation to proceed, and, thus veiled, remained till its conclusion. The admission to these ancient theaters was at first one drachma; but Pericles caused the price to be lowered to two obols. In their personations, the Grecian actors aimed at gravity of movement and declamatory grace, rather than the rapidity and vivacity of passion. They held a high rank in the republic, and popularity carried with it a rich recompense.

Comedy. This form of the drama was commonly devoted to satire upon human frailties and frivolities. It is said to have originated, like tragedy, in the Bacchic festivals, in which the rustic revellers celebrated the conclusion of the vintage season by processions, songs, and rude satiric jests, jeering the admiring crowd with a license that would not have been permitted under other circumstances. Susarian, a native of Megara, was the first to bring order out of the wild confusion of these orgies. He carried his organized company of buffoons from place to place on carts, their faces being smeared with the lees of wine, instead of wearing masks as in the tragic drama. The actors probably stood upon their cart, or on an elevated platform, and in their exercises kept up the biting satires of their predecessors. From this rustic entertainment developed the Attic comedy, which in its older form continued a satirical burlesque, whose biting jests spared no member or class of the State, and whose attacks were made with complete immunity. Comedy developed in the hands of a number of authors, whose names alone survive, while at the same time a similar development took place in Sicily; Epicharmus, Phornis and Dinolochus being perhaps the true originators of the art. In Athens there were two important predecessors of Aristophanes, Cratichus, born 519 B. C., and Eupolis, born 446 B. C. These writers first made comedy a terrible weapon of personal attack, assailing the highest and lowest with the most un stinted abuse, yet with the full support of the people. Aristophanes, born about 448 B. C., brought this form of the drama to its ultimate perfection, and has left us the only examples we possess of the abundant works of the Greek comedians. For the later history of this subject see COMEDY.

Roman Drama. The Romans had a sort of rude histrionic representation of their own. Their oldest spoken plays were borrowed from the Oscs, the indigenous inhabitants of Italy, and were called *Fabule Atellanæ*. The performance consisted of satirical couplets, which were declaimed during the intervals of the games, and characters of fabulous antiquity were usually personated. According to Livy, 367 years before the birth of Christ, during the rage of the great pestilence, in order to propitiate the deities, the Romans introduced a regular dramatic entertainment. Their plays, however, notwithstanding the assumption of the mask and buskin as a regular profession, were rude in structure, until Livius Andronicus, who was by birth a Grecian, led the way to improvement by transplanting his native stage to Rome. The works of the Roman tragic authors, with the exception of those of Seneca,

have not reached our time, though, singularly enough, we are compelled to judge of the new school of Greek comedy through the medium of Latin translations; indeed the Romans had two species of comedy—the *Palliata*, in which the scene and dress were Grecian, and the *Togata*, in which they were Roman. It is presumed that, as Roscius Gallus is mentioned by Cicero as wearing a mask upon the stage, in order to conceal an obliquity of vision, other actors of his day played with their faces uncovered. The Romans, to quote the words of St. Augustine, "accounted the art of stage-playing infamous, and ordained that stage-players should not only be deprived of the honor of other citizens, but also be disfranchised and thrust out of their tribe." This feeling was doubtless engendered by the fact that the Romans confounded the dramatic art with the games of the circus and amphitheater, in which gladiators and slaves performed. Notwithstanding a denunciatory edict of the prætor, many actors rose to great wealth and high esteem in Rome. Roscius was the friend of Piso, Sylla, and Cicero; and Paris, who was afterward put to death by Domitian out of jealousy, exercised an arbitrary authority over dramatic authors. Critics formed a code of laws for the guidance and regulation of the poet, of which Aristotle and Horace expressed their approval.

Medieval Drama. The ancient dramatic art expired with pagan Rome, and in its first age Christianity was inimical to the theater. Any person connected with the dramatic art was not allowed baptism. The connection of the ancient theater with heathen superstition, and the profligacy of some of the entertainments exhibited offended the primitive Church. With the extinction of literature and art every trace of dramatic composition or performance was for many centuries lost. The modern drama, like the ancient, had its foundation in religion; with this difference, that in place of the worship of Bacchus, miracle-plays and mysteries were produced. The revival of the drama in this form is said to have taken place in Italy, though this is by no means certain, the French claiming priority. The Chester Mysteries, the earliest plays acted publicly in England, were performed from 1268 to 1276. The meaning attached to the word "mystery" may be gleaned from the quotation of two of the verses of the proclamation, or prologue, to the famous Chester Mysteries or Whitsun Plays. The "moonke" mentioned is one Done Randali, of Chester Abbey, the deviser of the Mysteries:

"This moonke, moonke-like in Scriptures well scene,
In stories travelled with the best sorte;
In pagentes set fourth, apparently to all eyne,
The Olde and Newe Testament with lively comforte
Intermynglyng therewith, onely to make sporte,
Some things not warranted by any writ,
Which, to glad the hearers, he woulde men to take yt.

"Now, you worshippfull Tanners, that of custome olde
The fall of Lucifer did set out
Some writers awarrant your matter; therefore be bould,
Lustily to place the same to all the rowte;
And yf any thereof stande in any doubt,
Your author his author hath, your shewe let bee,
Good speech, fyne players, with apparill comelye."

Rude parodies of sacred history being inconsistent with the purity of the Christian religion, the Mysteries were succeeded by the Moralities, a sort of performance that bore considerable resemblance to the Old Comedy of the ancients, as they were founded upon allegorical subjects, almost always bore allusion to the events of the day, and abounded with strong and biting satire. Upon the revival of letters Latin plays were composed by the learned in avowed imitation of the productions of ancient Greece and Rome; but the general public, to whom the classic drama was a sealed book, showed a strong partiality to a new sort of representation, a union, or rather compound of tragedy and comedy, which was called History or Historical Drama. These generally told the exploits of a king from his manhood to his death, with such points of history as were the most marked and striking of his reign. These dramatic chronicles were so popular in England that hardly a single subject upon which Shakespeare wrote had not been appropriated by his predecessors; the majority of his historical plays were, therefore, altered by him from the plan of old dramatic chronicles.

Romantic Drama. The romantic drama, which followed the historical, was founded upon legends, poems, and popular fictitious narratives. In Spain, the land of chivalric romance, Lope de Vega and Calderon, disregarding or despising the restrictions of the classic drama, inaugurated a new school. Their heroes, the exact reverse of the passionate, sensual demigods of the ancient drama, were virtuous, self-sacrificing, brave, true, and loyal. Action and bustle took the place of tedious elaboration of sentiment and thought; the passion of love was sublimated into a high, generous, and romantic feeling; and the introduction of a clown, who made extemporaneous jests both to actors and to audience, gave great pleasure to spectators, who were unwilling that the actors should entirely ignore their presence, and liked a chorus, though comprehended in one person, to explain and criticise the action of a play during its progress.

Italy. The Italian comedy produced characters that never varied, some of whom are supposed to have descended directly from the *mimi* of the *Fabule Atellanæ*. This ancient origin is claimed for *Harlequin* and *Punchinello*, both of whom are buffoons, cowards, wags, and jesters, like the *Sannio* of the Romans. *Pantalone* was a Venetian merchant; *Dottore*, a Bolognese physician; *Spaciento*, a Neapolitan braggadocio; *Pullicenella*, a wag of Apulia; *Giangurgolo* and *Coriello*, two clowns of Calabria; *Gelsomino*, a Roman beau; *Betrane*, a

Milanese simpleton; *Brighella*, a Ferrarese pimp, and *Arlecchino*, a blundering servant of Bergamo. Thus each personage, clad in a peculiar dress, and furnished with a peculiar mask, was intended as a characteristic representative of some particular Italian district or town. To further this local personation, each actor spoke the dialect of the place he represented. Besides these, and a few other such personages, of which at least four were introduced into each play, there were the *amorosos* or *inamoratas*—that is, men and women who played serious parts; and also *Smeraldina*, *Colombina*, *Spilletta*, and other females, who acted the *servettas* and waiting-maids. These last wore no masks, and all spoke Tuscan or Roman. The pieces played by them were called *Commedia dell'Arte*. Goldoni adopted *Harlequin* and the rest of his mimic troop; but, instead of trusting to the extemporary wit of the actors, wrote for them plots and dialogues.

French Drama. France has boasted that when the classic drama was banished from every other stage in Europe, it found a home in Paris; and yet her drama, like those of other nations, was, during the 16th and a great part of the 17th century, borrowed from Spain. As the English owe the excellence of their stage to Shakespeare, so France is equally indebted to Corneille. It was at this period that the classical fetters of the three unities were imposed upon French dramatic poets. "The unities of action, time, and place must be observed," Corneille adds, "*Personne n'en doute.*" The French are not only proud of their pretensions to classicality and their regard for the unities, but are enabled to boast with justice that they have discarded tragic-comedy—that is, such pieces as comprehend two distinct plots, one of a serious, the other of a humorous sort, each totally unconnected with the other. Corneille and Racine were, according to Sir Walter Scott, the Homer and the Virgil of the French drama. Even Voltaire himself was content to imitate these two great models, although he endeavored to make a Turk talk like a Turk and a savage like a savage, instead of in the brilliant metaphor and skilled sentiment of the buskined heroes of his predecessors. Molière, the founder of French comedy, followed the path marked out by Menander and has closely copied some pieces from the Latin stage. Few satirists have attacked vice and folly so successfully; and it should be remembered, when considering his marvelous power, that while the English stage was fostered by a people, the French stage was merely the appanage of a court. Thus the sphere of the satirist was limited to the palace and its immediate surroundings. Schlegel observes: "The object of French comedy is not life, but society—that perpetual negotiation between conflicting vanities which never ends in a sincere treaty of peace; the embroidered dress, the hat under the arm, and the sword by the side, essentially belong to them; and the whole of the characterization is limited to the folly of the men and the coquetry of the women." This comedy of manners rather than of nature was overturned by the *Figaro* of Beaumarchais—a production in which incident, intrigue, characters in high and low life, lively dialogue, and political satire were so craftily intermingled, the whole being flavored with a strong tone of licentiousness, that it was received by the Parisian public with an almost frantic enthusiasm.

English Drama. The English drama was founded upon the Spanish model. *Ferrex and Porrex*, the first regular English tragedy, was acted before Queen Elizabeth on Jan. 18, 1561, by the gentlemen of the Inner Temple. A version of the same piece was acted in one of the minor London theaters in 1854, but without success. *Gammer Gurton's Needle*, which was said to be the work of John Still, Master of Arts, and afterward bishop of Bath and Wells, was first performed in Christ's College, Cambridge, in 1575. The jest of the piece turns on the loss and recovery of the needle with which *Gammer Gurton* repaired the breeches of her man *Hodge*. The popular characters are the *Sturdy Beggar*, the *Country Vicar*, *The Clown*, and the *Shrew*. Thus we see that, at the very commencement, English comedy was founded on characters of middle and humble life. It is to be remarked, that as the first English tragedy had no intermixture of comedy, so the first English comedy had no intermixture of tragedy. The influence of the plays of Shakespeare upon English poetry, the drama, and the world at large, is too universally recognized to need comment in a work of this description, even if the space prescribed to us were unlimited. It is enough to say that his transcendent genius and matchless power created a model which never has been, and perhaps never will be, equaled. His historical plays throw a light upon his country's history; his tragedies are acknowledged masterpieces by the highest critics of any civilized nation; and his romantic dramas and comedies, though not faultless, abound with the errors of a genius incapable of self-control, and too powerful to submit to the trammels imposed upon the dramatist by the pedantry of inferior minds. The tragedies of Jonson are distinguished for a sublime expression of moral sentiment. In comedy he occasionally followed the older Grecian school, as in the *Tale of a Tub*, where, in order to ridicule his enemy, *Luigo Jones*, he trod in the path of Aristophanes. In the *Staple of News* and *Cynthia's Revels* he introduced allegorical characters and personified abstract passions. In tracing the history of the English drama, we perceive the immense influence of the plays of Shakespeare over his successors. Massinger, a man of considerable genius, endeavored to unite the romance of Shakespeare to the realistic humor of Jonson; and though he has to an extent succeeded, his love passages are infinitely less interesting and his villainies more ro-

volting than are those of his two models. Beaumont and Fletcher, both men of remarkable talent, grafted upon Shakespeare's method of composition the boundless license of the Spanish school. Sometimes almost discarding probability, violating character, and therefore weakening, if not destroying, the interest of the plot, they compensate for these faults and irregularities by admirable descriptive passages, elegant wit, passionate and tender dialogue and rich humor. The plays of Shirley, of Ford, of Webster and Decker, although now forgotten by the mere playgoer, and holding no place upon the boards of the theater of the present day, abound with admirable passages and detached scenes of singular merit; and it is, doubtless, to the fact of the rude apology for scenery and the eye of the spectator being entirely ungratified in the English playhouses of the 16th and 17th centuries, that we are indebted for that brilliant band of distinguished poets known as the Elder Dramatists. Audiences crowded to the theater, not to gaze on splendid scenery, but to listen to the literary production of the author and to the declamatory graces of the player. The great and original school, founded by Shakespeare and Ben Jonson, and followed by Massinger, Beaumont and Fletcher, and others, closed with the outbreak of the civil war in 1642. A proclamation shut up the theaters and dispersed the players, almost all of whom took up arms for King Charles I., in whose service many of them perished. One Robinson, an actor at the Blackfriars theater, was killed by Col. Harrison, the regicide, in cold blood, Harrison declaiming the text from Scripture, "Cursed be he who doeth the Lord's work negligently." The most ancient English playhouses were, according to Malone, the Curtain, in Shoreditch, and the Theater. In the time of Shakespeare there were no less than nine theaters open; three being private houses—one in Blackfriars; the Cockpit, or Phoenix, in Drury Lane; and one in Salisbury Court, Fleet Street. The six public theaters were the Globe, the Rose, and the Hope, on the Bank-side; the Red Bull, and the Fortune. In the winter of 1648 the players at the Cockpit, while acting the *Bloody Brothers*, were surprised by a party of soldiers in the middle of the play and carried to prison in their stage dresses. On Feb. 11, 1647, an act of Parliament was passed, that all stage galleries, seats and boxes should be pulled down by warrant of two justices of the peace; that all actors of plays for the time to come, being convicted, should be publicly whipped; and all spectators of plays should, for each offense, pay five shillings. The Restoration may be said to have inducted the second period of the English drama. Charles II., who in his exile imbibed French tastes, brought with him to England a relish for the beauties of the French stage. Dryden, Howard, and the authors of the day, fostered this taste, and heroic plays were applauded by both the court and the city. The heroic play was a forced and unnatural mixture of French sentiment, English noise and bustle, stifled dialogues, drums and processions. The heroes and heroines were all of one exactly virtuous pattern; valor was entirely refined, and love of the most impossible purity. At the same time, comedy deserted delineation of character and construction of plot, and endeavored to shine only in dialogue. The atmosphere of a licentious court infected the stage; and authors strove by a succession of smart jests and loose epigrams to amuse the wits of the town rather than to point a moral or wing a satirical truth. About this time actresses first appeared upon the stage. Before the Restoration the characters of women had been played by boys and young men. It is to this introduction that we owe the brilliant display of passionate tenderness evinced in the female characters of Otway, and, despite some rant and fustian, of Lee. The 18th century ushered in genteel comedy, an entertainment that exhibited the foibles of the higher classes; comedy of intrigue, in which plots and surprises succeeded each other; and English opera. To Garrick the stage was indebted for a revival of the plays of Shakespeare; and to Sheridan for a description of comedy that, to polish and wit of the authors of the Congreve and Farquhar school, added humorous and characteristic dialogue. The comedies of Goldsmith are unsurpassed in the richness of their humor, while the two Colmans contributed admirable comedies to the rich repertory of the drama.

The drama in Italy can scarcely be said to have produced any writers of the highest order, the best names being Goldoni in comedy, and Alfieri and Manzoni in tragedy; and the Germans were late in developing dramatic skill, their works being imitations of the French until the period of Lessing. At a later date, in the hands of Goethe and Schiller, the art reached an advanced stage of merit. Scandinavia has also produced dramatic writers of high worth, of whom we may particularly mention the Danish writer Ohlmslæger. It is not our purpose here to speak of the recent drama, other than to say that it has largely descended from its former standing as a field of literature and become merely a means of theatrical entertainment; so close attention being given to adaptation to the stage, that literary excellence is to a considerable extent lost sight of. This not wholly the case; many modern English plays can read as well as seen with enjoyment. Victor Hugo and other French writers have produced readable dramas, while among American writers we may instance, as an author whose works are instinct with the use of the old poetic spirit of the drama. A class of dramatic works has also been produced almost purely literary in design and unadapted to representation. Among those of an older date may be instanced the admirable *Cenci* of Shelley, whose subject removes it

from the stage, and the literary dramas of Byron. A new school of authors of this type has recently arisen, of whom the best known writer is the Norwegian dramatist Ibsen, in whose works the most vital modern social questions are freely handled, and subjects of ethical interest exploited in a manner that renders their treatment unsuitable to stage representation, though of living interest to readers. Such works as these cannot fairly be classed with the drama—of which theatrical performance is an essential element—and are properly set aside as a distinct class of dramatic poetry, being dramas only in form, not in essential purpose and significance.

Drap d'été (*drā-dā-tā'*), *n.* [Fr.] A light twilled woolen fabric, resembling merino.

Dra'per, ANDREW SLOANE, LL.D., lawyer and educator, born at Westford, N. Y., June 21, 1848; studied and practiced law in Albany, N. Y. Was a member of the New York Legislature (1881). Appointed by President Arthur one of the judges of the U. S. Court of Alabama Claims. He took a deep interest in the subject of education, was member of the Albany School Board, and Supt. of Public Instruction in N. Y., (1886-92); afterward held a like position in Ohio, and in 1894 was appointed president of the University of Illinois. He wrote much on the subject of schools, teaching, responsibilities of trustees, &c. Among these treatises are: *The Power and Obligations of Teachers; Authority of the State in the Education of her Children; and School Administration in Large Cities.*

Draper, JOHN CHRISTOPHER, M.D., LL.D., physiologist and chemist, born in Prince Edward co., Va., March 31, 1835, a son of John William D. Graduated (1851) from the medical department of the University of the City of New York and became professor of physiology in that institution. He also held professorships of chemistry in Cooper Union and the University Medical College; and of physiology and natural history in the College of the City of New York. He was the author of *On Respiration; Text Book on Anatomy, Physiology and Hygiene.* Died in New York city, Dec. 20, 1885.

Draper, LYMAN COPELAND, antiquarian, born in Erie co., N. Y., Sept. 4, 1815. Removed with his father to Lockport, where he attended the village school, worked on his father's farm and clerked in stores (1830-33). Afterward went to Mobile, Ala., and (1835-36) was a student at Granville College, Ohio. In 1838 he began corresponding with Western pioneers, edited a paper in Mississippi (1840), and was clerk in the office of the Erie canal (1842). He spent ten years in Philadelphia searching for historical data. Went to Madison, Wis. (1853), as Secretary of the State Historical Society. Was State Supt. of Instruction (1858-9) returning the next year to his former office. Declined a reelection in 1887. The degree of LL.D. was conferred on him (1881) by the University of Wisconsin. He published *Madison, the Capital of Wisconsin; King's Mountain and its Heroes, &c.* Died Aug. 26, 1891.

Draper, WILLIAM F., soldier, manufacturer, and diplomat, a native of Massachusetts, from which State he entered the Federal army as a volunteer at 19, and served through the war, rising gradually in rank from second lieutenant to brigadier-general. He was twice wounded, at the battle of the Wilderness and the Pegasus Farm engagement. After the war Gen. D. engaged in the manufacture of cotton machinery; in 1876 became a delegate to the Republican Convention at Cincinnati, and in 1890 president of the Home Market Club, of Boston. His first political service was as a member of the Fifty-third Congress, in which he served on the Committees on Patents and Foreign Affairs. In 1897 he was appointed, by President McKinley, U. S. Ambassador to Italy.

Dravidians. The name given to a large section of the population of Hindustan, of somewhat problematical origin, several writers claiming that they are of Aryan stock and their language an offshoot of Sanskrit, while others, including Max Müller, consider them of independent origin, seeming Sanskrit linguistic elements having been borrowed. They number in all about 50,000,000 and are perhaps of Mongolian origin, not aborigines of India, but the descendants of immigrants who preceded the Aryans. There are twelve separate languages or dialects spoken by the D., of which the principal are the Tamil, Telugu, Canarese, and Malayalam. Tamil, which is spoken by 16,000,000 people, is perhaps the oldest form, and was spoken in India before the Aryan invasion. Telugu was spoken by as many people, and for euphony and melody holds the first place, having received the designation of the "Italian of the East." D. literature is principally confined to the Tamil tongue, and includes some ancient poetical works with some valuable modern productions of eighteenth century date.

Dredg'er, *n.* (*Hydral. Eng.*) A machine for the removal of obstructions to navigation, or clearing and deepening bodies of water for any purpose. Of these the earliest and simplest form is that known as the *bag and spoon dredge*, formerly much used in excavating the canals of Holland. It consists of an iron ring of about 2 feet diameter, with a cutting edge and carrying a leather sack. It was dragged along the bottom by a rope attached to a moving scow, being drawn up and emptied at intervals. The *scraper*, another primitive form, is an iron scoop attached to a beam, whose upper end is fixed to a scow, and drags off the mud from the bottom as the scow is slowly moved. A more advanced form, the *ladder or bucket dredge*, consists of an endless chain which works over wheels or pulleys capable of being arranged to suit various depths of water. The surface of the chain carries a series of buckets or scoops which take up the mud as they scrape the bottom, and

discharge it, while rounding the upper pulley, into troughs leading to scows alongside. Dredges of this character, operated by steam power, are rapid and efficient, and have been widely employed, as in the excavation of the Suez canal. In some instances a large wheel replaces the endless chain, the wheel being 25 feet or more in diameter, according to the depth, and bearing a series of buckets on its outer surface. The wheel is set in a well in the boat, the axle working in shafts which can be raised or lowered to adapt the wheel to the depth of water. As the wheel turns, the buckets scoop up mud from the bottom; and, when they reach a certain height, an automatic device unlatches their hinged bottoms and permits their contents to discharge into a shoot leading to an adjoining scow. Another usual form of dredge is known technically as the *clam-shell*. This is composed of two parts, hinged together, and so arranged as to open and close automatically when at the proper height or depth. The bucket, suspended from the end of a crane-jib, is open as it descends, and continues so until its edges have sunk into the mud to the bottom. It is then closed, being filled with mud in the closing process. Finally it is drawn up, swung round over a scow, opened, and its contents discharged. If the material be hard and compact, the cutting edges of the bucket are provided with sharp teeth. If stones, logs, or similar material are to be raised, strong grappling irons replace the bucket. The *single-scoop or dipper dredge* consists of a scoop-like bucket, with a swinging door at its back, closed by a catch which can be readily opened for a discharge of its contents. It is operated from a crane and works between two parallel timbers. Another class of machines, known as *current dredges*, have for their purpose the loosening of silt to be swept away by the current. As the surface velocity much exceeds that at the bottom, these dredges must be so arranged as to exert a lifting action on the silt, bringing it within the influence of the stronger current. Many devices have been invented for this purpose, more or less effective, they being principally of value where the character of the stream is such that the material raised is not likely to sink into a new bar lower down. Current dredges are cheap, rapid, and in many instances very useful.—*Steam Pump and Hydraulic Dredges.* Dredges of this character act on the principle of pumping up the sand from the bottom through tubes and discharging it at a distance from the bar, or on shore. In these the bottom of the frame-work is fitted with teeth, for loosening the sand, which, semi-liquid with water, is drawn up in a continuous stream through the suction pipes. One form of this dredge, invented in California, is provided with an apparatus to cut a deep swath in the substance of the bar. From this the earth, mixed with water, is fed to the delivery pipe, up which it is drawn by a centrifugal pump. These machines work very rapidly, one of them having moved 165,000 cubic yards of material in a single month. The utility of dredging operations depends upon the rapidity with which silt is re-deposited on the bar. At points on the seaboard, through the action of waves and currents, new earth is deposited as fast as the old can be removed. In such cases dredging is useless, and from this cause many attempts in the U. S. to dredge ocean bars have proved failures. Such efforts can only be successful where the silt-depositing currents are deflected by supplementary structures.

Dresden Porcelain. See CERAMICS.

Dress'er, HENRY ERLES, ornithologist, born at Thirsk, Yorkshire, Eng., May 9, 1838; educated in England, Germany and Sweden. He gave his leisure time to the study of birds, especially those of Europe; and was made a member of the council of the Zoological Society of London, president of the Yorkshire Naturalists' Union, and secretary of the British Ornithologists' Union. He has published *A History of the Birds of Europe*, a monographic work in eight quarto volumes, with colored plates. Another important work is *A Monograph of the Bee-Eaters.*

Drew, JOHN, comedian, born Sept. 3, 1825. He made his first appearance in the Bowery Theater, New York, in 1845; acted in Albany; and from there went to Philadelphia, joining William Wheatley in the management of the Arch Street Theater. He acted in the principal cities of the U. S. and visited England and Australia. Died in Philadelphia, May 21, 1862.—His wife, Louisa, was for a full generation one of America's leading actresses, achieving much success in high comedy rôles, especially that of *Mrs. Malaprop*, in *The Rivals*, which character she assumed as late as 1895 in a number of special performances by a cast embracing such other stage veterans as Joe Jefferson, &c. Mrs. D. managed the Arch Street Theater, Philadelphia, for many years after her husband's death.

Drew, JOHN, actor, son of John and Louisa D., was born in Philadelphia, Nov. 13, 1853, and educated at the Episcopal Academy. His first appearance on the stage was at the Arch Street Theater in the character of *Plumper*, in *Cool as a Cucumber*. He played for a short season at the same theater with Edwin Booth. He visited Europe in 1892 with Daly's company, playing Shakespearean and other classic rôles. He began his career as a star in *The Masked Ball* in the autumn of 1892.

Dris'ler, HENRY, LL.D., scholar, born Dec. 27, 1818; graduated at Columbia College (1839); taught for several years in its grammar school, and was appointed (1843) tutor of Greek and Latin in the College. In 1857 he was made professor of Latin, and on the death of Dr. Charles Anthon (1867), he was transferred to the chair of Greek. Was dean of the School of Arts (1889-94). He assisted Dr. Anthon in the preparation of his

numerous text-books in classics, and is still general editor of Harper's *Classical Series*. Among his important contributions to classical literature are the editions of Liddell & Scott's *Passow's Greek Lexicon* (1846), and Yonge's *English-Greek Lexicon* (1870).

Drontheim (*drôn'thim*), or TRONDHEIM, a seaport town of Norway, beautifully situated on a circular bay at the mouth of the Drontheim Fiord; Lat. 63° 25' 48" N., Lon. 10° 23' 45" E. The most remarkable edifices and establishments are the cathedral, built in 1033; the palace of the old Norwegian kings, of which *D.* was the capital; and a museum, including a picture gallery and a library. The breweries are famous for a beer which is largely exported. The building-yards fit out vessels which bear a high name for their sailing properties. Pop. (1895) 31,200.

Droylsden (*droilz'd'n*), a manufacturing town of England, County Lancaster, 4 m. E. of Manchester. Cotton-spinning is conducted here on an extensive scale. Pop. (1895) 12,810.

Droysen, JOHANN GUSTAV, historian and philologist, born in Prussia, July 6, 1808. He received an academic training in Berlin, and was appointed professor extraordinary in the University (1835); subsequently went to Kiel, where he took an active part in the revolution of 1848, on account of which he was obliged to leave the city, going to Jena and returning to Berlin in 1859, where he was made professor of history. Among his various historical works, in German, are the *History of Alexander, the Great*; a *History of Hellenism*; and a *History of Prussian Politics*. He also made metrical translations of *Æschylus* and *Aristophanes*. Died July 19, 1884.

Droz (*drô*), ANTOINE GUSTAVE, novelist, b. at Paris, June 6, 1832; studied art, but afterward made literature his profession, in which field he was very successful. His works include: *La Vie Parisienne*; *Monsieur, Madame et Bebe*; *Entre Nous*; *Autour d'une Source*; *Un Paquet de Lettres*; *L'Enfant*, &c. Died at Paris, Oct. 23, 1895.

Drying Machines. Of these there are several kinds in use. In case of the drying of long webs of calico or other fabrics, the machine used consists of a series of metal cylinders revolving in an iron frame and heated by steam introduced internally; the rollers being arranged sometimes vertically, sometimes horizontally, and the cloth passing over them in a continuous web. What are known as centrifugal *D. M.*, or hydro-extractors, consist of a circular wire basket mounted on a shaft and set in a close metal jacket. The materials to be dried are placed in the basket, which is made to revolve at a speed of from 700 to 2000 revolutions per minute. Centrifugal force causes the water to fly off, and it is removed by means of a discharge pipe. This kind of machine, modified to meet various requirements, is very largely used, it being adapted to many purposes. In the Blackmann air-propeller, wool and other textile material is spread over a perforated surface which is in connection with a revolving propeller placed at the top of a vertical shaft. This apparatus draws heated air through the wool, carrying off its moisture, and expelling the moist air from the mouth of the shaft. Yarns are often dried in a hot chamber, through which they are slowly drawn by a continuous chain, on which are rollers carrying the hanks of yarn. In paper-making machines the drying apparatus consists of a series of drums on whose circumference are wooden spars. These are mounted in horizontal succession on an iron frame, and move at a slow speed as the web of paper passes over them. Within the drums are fans which drive heated air against the inner surface of the paper.

Dry Plate. (*Photog.*) A sensitized plate which does not require the use of a bath before its employment in photography.

Du'aine, *n.* (*Chem.*) A blasting powder chiefly consisting of nitrate of ammonia and very fine sawdust, which has been acted upon by nitro-sulphuric acid. It is said not to be decomposed by accidental contact with acids, and not to lose any of its properties in cold or heat. Its explosion does not produce any noxious gases, and it will burn in the open air without exploding. *D.* has advantages over ordinary gunpowder in cases where the blasting is to be done in soft stone or coal; but where the labor of boring is difficult, or where the gaining of time is of much importance, and where the blasting is carried on in very hard and solid rock, such as in most forms of tunneling, dynamite is to be preferred.

Duane, JAMES CHATHAM, soldier; born at Schenectady, N. Y., June 30, 1824; graduated at West Point in 1848; served throughout the Civil War, winning distinction for gallantry and skill, and attaining the rank of brigadier-general. Since the war, has served in various government engineering works, and in 1886 was made chief of engineers. Retired June 30, 1888, and was appointed commissioner of the Croton aqueduct, in New York.

Dublin, in *Texas*, a thriving city of Erath co., 90 m. by rail S.W. of Fort Worth; has a large trade in cotton and other products; some manufacturing interests. Pop. (1897) about 3,000.

Dubois, in *Pennsylvania*, an important post-borough of Clearfield co., on branch of the Alle. Val. R.R., 129 m. E.N.E. of Pittsburgh; has several coal mines and immense lumbering interests. Pop. (1897) abt. 7,500.

Duclerc, CHARLES THÉODORE EUGÈNE, statesman, born at Bagnères-de-Bigorre, France, Nov. 9, 1812; was editor of *Le Bon Sens*, in Paris, and in 1840 contributed to the *National* a series of important financial articles. He was active in the Revolution of 1848, and was a representative from the departments of the Landes and the Basses-Pyrénées, leading the Republican left, and figuring prominently in debate. Was elected vice-presi-

dent of the National Assembly (1875), and on Dec. 10, of the same year, senator for life. Became Premier on Aug. 7, 1882, but its persistent neglect to expel from French territory princes who might be dangerous to the republic and its refusal to consent to a compromise bill caused the fall of his not over-strong ministry. Died July 21, 1888.

Ducrot (*du-krô*), AUGUSTE ALEXANDRE, soldier, born at Nevers, France, Feb. 24, 1817; educated at Saint Cyr. He was appointed general of division, June 7, 1865, and served in the Franco-German war. Declining the favors which the Germans offered the French officers who fell into their hands, he was imprisoned at Pont-à-Mousson after the battle of Sedan. From this prison he made his escape, and succeeded in reaching Paris. Subsequently commanded at Rneil, La Jonchère, and Buzenval, and after peace was declared was appointed commander-in-chief of the Eighth army corps, stationed at Bourges. He had been strongly opposed to the re-establishment of the Empire. His works include *Défense de Paris*; *La Vérité sur l'Algérie*; *La Journée de Sedan*, &c. Died in Paris, Aug. 17, 1882.

Dude, *n.* A term which came into use in London and elsewhere about 1850-82, in connection with the affectations of the æsthetic cult then somewhat in vogue. It probably had reference to the peculiar dress, or *duds*, of the æsthètes of that period, and was later applied to any person whose attire was constantly in the height of fashion, or evidently designed to attract attention by its novelty or sumptuousness. By extension it is now applied to any person whose affectations in style or unusual niceties of manner or expression are calculated to attract special notice; as, a literary *dude*; a clerical *dude*, &c.

Dudeen' or Dudheen', *n.* [*Irish.*] A clay tobacco-pipe with a short stem.

Dudette', *n.* A young dude. (Humorous.)

Dudine (*du-deen'*), *n.* A feminine dude.

Du'dish, *n.* Like a dude; resembling, or having the characteristics of a dude.

Du'dism or Du'dishness, *n.* The manner, appearance, or characteristics of a dude.

Dudley, CHARLES EDWARD, an American philanthropist, born in Staffordshire, Eng., 1780. Emigrating to the U. S., he became a resident of Albany in 1812, and filled the office of U. S. Senator from 1828 to 1833. He founded at Albany the well-known Dudley Observatory, which was largely enriched after his death by benefactions from his widow. Died 1841.

Du'er, JOHN, a distinguished American jurist, born at Albany, N. Y., 1782. After serving as one of the Commissioners appointed to revise the statutes of that State in 1825, he became chief-justice of the Superior Court of the city of New York in 1857. His reputation chiefly rests upon his *Law and Practice of Marine Insurance*, a standard authority upon the subject of which it treats. Died 1858.

Duff, ALEXANDER, D.D., LL.D., Presbyterian missionary, born near Pitlochrie, Perthshire, Scotland, April 26, 1806; educated at St. Andrews, and for many years labored successfully as a missionary in India. He believed education to be of great value in secular matters, and strongly advocated its development. In 1843, after the disruption of the Scottish Church, he was the chief agent of the mission maintained at Calcutta by the Free Church. He visited the U. S. in 1854, and afterward returned to India (1855), remaining eight years; subsequently became professor of Evangelistic Theology in the theological free schools of the Free Church. Died in Edinburgh, Feb. 12, 1878.

Duffer, *n.* A clumsy or thick-headed person, especially one who is incompetent to discharge the duties which devolve upon him (U. S. slang).—A peddler or hawk (Eng. slang).—A pigeon of common stock as distinguished from one of a fancy or finely bred variety.

Duffy, SIR CHARLES GAVAN, statesman and author, born in Monaghan, Ireland, 1816; was one of the founders of the *Nation*, a paper which at first gave fervent support to O'Connell. This caused his arrest, and at his trial he was convicted of sedition, but on appeal the House of Lords quashed the conviction. He was acquitted a second time in 1848, when he was tried with the leaders of the Young Ireland party for treason-felony. In 1852 he was returned to Parliament, resigning in 1856 and emigrating to Australia. After holding a number of offices in that colony, he became Prime Minister in 1871. He has published *Four Years of Irish History*; and *The Ballad Poetry of Ireland*.

Dug'out, *n.* A rude cave or dwelling formed by an excavation on a hillside or elsewhere, the opening thereto being faced with logs.—A cave intended for protection from tornadoes, or for storage purposes (U. S.). See also SECTION I.

Duhring, LOUIS A., M.D., dermatologist, born in Philadelphia, Pa., Dec. 23, 1845; received his education in the University of Pennsylvania and afterward became professor of dermatology in that institution. The British, French and New York Dermatological Societies made him a member, and he has been president of the American Dermatological Association; author of a *Treatise on Skin Diseases*; *Atlas of Skin Diseases*; and *Epitome of Skin Diseases*.

Dumas (*du-mû'*), JEAN BAPTISTE, chemist, born in Alais, France, July 14, 1800; studied pharmacy in Geneva and afterward in Paris, and was appointed professor of chemistry in the *École centrale des Arts et Manufactures*, and at the Sorbonne; has done much for the development of the science of chemistry. In 1840 he became one of the editors of the *Annales de Chimie et de Physique*, and was appointed (1849) Minister of Agriculture and Commerce. Died at Cannes, April 11, 1884.

Du Maurier, GEORGE LOUIS P. B., artist and novelist of French descent; born in England, March 6, 1818. He was a pupil of Gleyre, intending to make painting his life-work, but a severe affection of his eyes in youth forced him to alter his plans for a time. After recovery he devoted himself principally to black-and-white work, making a specialty of book illustration. Among his earliest work was the illustration of an English publication entitled *Once a Week*, and after 1862 he contributed many illustrations to *Punch*, on which work his fame was chiefly made. He also illustrated Douglas Jerrold's *Story of a Feather*, and other books, including Thackeray's *Henry Esmond*. He later contributed humorous illustrations to *Harper's Magazine*, and in 1891 entered the literary field with a remarkable novel entitled *Peppercorn*. This was followed in 1894, by *Trilby*, whose success was most pronounced; and in 1896, by *The Martian*. Died Oct. 8, 1896.

Dumichen, JOHANNES, Egyptologist; born at Weholz, near Grossglogau, Silesia, Oct. 15, 1833; educated at the Universities of Berlin and Breslau, and afterwards attended the former university from 1859 to 1862, devoting himself to the study of Egyptian antiquities. He passed many years in archaeological research in the valley of the Nile, and, with the exception of Lepsius, the only Egyptologist of modern times who has travelled through the ancient kingdom of Ethiopia. The University of Strasburg made him professor-extraordinary of Egyptology, and, by imperial order, he was appointed professor in the philosophical faculty of the same institution. He made a fifth visit to Egypt in August 1875, returning in April, 1876. Since that time he has remained in Germany. Among his works are *Ueber Tempel und Gräber im Alten Ägypten*; *Baugeschichte der Dendera tempels*; *Der Oasen des libyschen Wüste*; *Der Felsen Tempel von Abu-Simbel*, &c.

Dun'can, SARA JEANNETTE, author; born in Brautford, Ontario, in 1863. In 1890, she married Mr. Everett Cotes, of Calcutta, and has since made her residence in India. Previous to her marriage, she was a contributor to Toronto and Montreal newspapers and periodicals, and in this capacity made a tour of the world. She is the author of *An American Girl in London*; *A Social Departure*; and *The Simple Adventures of a Meinsahib*.

Duncker, MAXIMILIAN WOLFGANG, historian; born in Berlin, Germany, Oct. 5, 1811; became implicated in the Democratic movements in Bonn, was placed under arrest and sentenced to six years' imprisonment, but was very soon pardoned. Was made professor of History at Halle (1842), a few years later a member of the German National Assembly, and (1857) professor at Tübingen. While keeper of the Prussian Archives, appointment which he received in 1861, he incorporated with them those of Hesse, Nassau and Hanover. Among his works are a *History of Antiquity*; *Feudalität und Aristokratie*; *Die Krisis der Reformation*, &c. Died in Anspach, July 22, 1886.

Dunellen, in *New Jersey*, a post-borough of Middlesex co., on C. R. R. of N. J., 15 m. S.W. of Elizabeth. Pop. (1897) about 1,450.

Du Pont, SAMUEL FRANCIS, a distinguished American naval officer, born in New Jersey, 1803. Entered the navy in his youth, he became commander in 1830 and in 1861 was given the charge of the Atlantic blockading squadron. In the same year he took the command of Port Royal harbor, S. C., and in 1862 became rear-admiral. In the year following, while in command of a fleet of monitors, he was repulsed by the garrison of Fort Sumter with the loss of one of his vessels. Died in 1865.

Dupré (*du-pré'*), JULES, landscape and marine painter, born at Nantes in 1812; entered his father's porcelain manufactory when a boy and studied designing. He began painting without instruction from a master, exhibiting five landscapes at the Salon of 1831. From the Salons of 1833 and 1849, and the Paris Exposition of 1867, he received second-class medals. In 1889 a medal of honor was awarded him by the Paris Exposition. He had previously been made an officer of the Legion of Honor. His landscapes are counted among the best of the romantic school, especially noted for qualities of color and unity of effect. Two celebrated canvases, *Morning*, and *Evening*, are in the Luxembourg Gallery, Paris. Died in 1889.

Dupré, JULIEN, landscape and figure painter, born in Paris, March 17, 1851; studied with Pils, Lehmann, a Langée. From the Salon of 1881, and the Paris Exposition of 1889, he received second-class medals, and was honored with a medal from the Centennial Exposition of Philadelphia in 1876. His pictures represent peasant life, and show careful study of nature and drawing. *The Pasture* is in the Museum at St. Louis Mo.; *Moving Clover*, and *The Refractory Cow*, are in the Luxembourg gallery, Paris.

Duran, EMILE AUGUSTE CAROLUS, painter, born in Lille, France, July 4, 1837; studied in Paris and visited Rome in 1861, subsequently spending some time in Spain, where his style was very much influenced by the works of Velasquez. *D.* is best known by his portraits which are noted for their coloring and truth to nature. His design, *Gloria Maria Medicis*, for a ceiling in the Luxembourg, was exhibited in 1878, and for *L'Assass* he was awarded his first medal. As a teacher he has been very successful.

Durand-Claye, ALFRED AUGUSTINE, civil engineer, born in Paris, July 18, 1841; educated at St. Barbe at the Polytechnic School, graduating with the highest honors. Was appointed chief engineer of the Ponts Chaussées (1868), and assigned, in the service of the city of Paris, the study of the questions of the utilization of sewage, and the purification of the Seine.

To this work he devoted his whole life, serving upon all the important commissions on public works. His principal writings were upon sewage disposal, sewage irrigation, &c. He was professor at the École des Beaux-Arts, and also taught in the École des Ponts et Chaussées. Died April 28, 1888.

urant', in Mississippi, a post-town of Holmes co., 59 miles N.E. of Jackson. Pop. (1897) about 1,400.

urbin, JOHN PRICE, D.D., Methodist Episcopal preacher, born in Bourbon co., Ky., in 1800; studied at Miami University and Cincinnati College, entering the ministry in 1819. He traveled in Europe and the Levant; and for a number of years was president of Dickinson College (q.v.), also missionary secretary of the Methodist Episcopal church. As a speaker he was noted for his eloquence, and as secretary showed much executive ability. His contributions to periodicals were numerous, and he has published *Observations in Europe, principally in France and Great Britain; Observations in Egypt, Palestine, &c.* Died in New York city, Oct. 17, 1876.

iron'eter, *n.* [Lat. *durus*, hard, and suff. *meter*, measure.] (*Mech.*) A device for testing the hardness of substances, consisting of a drilling instrument furnished with an apparatus to gauge the amount of penetration resulting from a given number of rotations at a certain pressure.

uruy (*du-ri'*), VICTOR, historian and educator, born at Paris, Sept. 11, 1811; entered the College of St. Barbe (1823), taking a course of classical study; subsequently became instructor in history in the College of Henry IV. at Paris. In 1853 received the degree of doctor in letters. Later in his career became minister of public instruction, having in the interval held several important positions. He was removed from his position of minister in 1869 and appointed a senator. The Academy of Inscriptions made him a member, also the Academy of Sciences Moral and Political; and he was grand officer of the Legion of Honor. As an author his works chiefly consist of text-books on history and geography, and include: *Histoire des Romains; Histoire de la Grèce Ancienne, &c.* This last named work was crowned by the Academy. Died Nov. 25, 1894.

ust-ball, *n.* (*Vet.*) A disease of horses, due to a concretion of grain dust in the intestine, producing obstruction and resultant inflammation. The treatment is to remove the ball by means of an active purge.

itch Gap, a canal or "cut-off," constructed upon the James river, below Richmond, Va., under the supervision of General Butler, during the Civil War.

itch'man, *n.* A term colloquially used by mechanics to designate a patched job; as, a piece inserted in a piece of joinery to hide bad fitting.

A layer of suet fastened by means of skewers into a piece of lean meat. (Butcher's slang.)

it/ton, CLARENCE EDWARD, soldier and geologist; born in Wallingford, Conn., May 15, 1841; graduated in arts at Yale College in 1860; entered the Civil War and became captain of the Twenty-first Connecticut volunteers. In 1863 he was made second lieutenant of ordnance in the U. S. Army; captain in 1873, major in 1890. As an ordnance officer he has written upon the subjects of gunnery, on the metallurgy of steel, and on economics, but has given special attention to the subject of geology. His works on this subject are: *Geology of the High Plateaus of Utah; Tertiary History of the Grand Cañon District; Hawaiian Volcanoes; Mount Taylor and the Zuñi Plateau, &c.* He was detailed to assist the U. S. survey of the Rocky Mountain region, and from 1880 to 1891 was a member of the U. S. Geological Survey; is also a member of the National Academy of Sciences.

Iveyrier, HENRI, traveller, born in Paris, Feb. 28, 1840; after completing his studies, and having procured from England the necessary support, he went on a tour of exploration through Africa, first visiting Algeria, making explorations in the northern parts of Sahara, and penetrating to the center of the Sudan. After his return he was made one of the perpetual secretaries of the Société de Géographie de Paris, and awarded its great gold medal. His works include *Exploration du Sahara; La Tunisie; Les Touaregs du Nord, &c.* Committed suicide near Sévres, April 26, 1892.

lyck'inek, EVERT AUGUSTUS, editor and essayist, born in New York, Nov. 23, 1816; was a graduate of Columbia College, and founder and editor of the *Literary World*. In collaboration with his brother, George L., published the *Cyclopedia of American Literature* (vols., 1856). He was also the author of *History of War for the Union, &c.* Died in New York, Aug., 1878.

y'kerbok, *n.* [Dutch, *duiker*, ducker, and *bok*, ck.] (*Zool.*) A small antelope (*Cephalophus mergens*) central and southern Africa; so called from its habit dodging swiftly through dense thickets.

brak', ANTONIN, musician, born Sept. 8, 1841, at Ilhausen, near Kralup, in Bohemia, the son of a teacher, and destined for the same trade. The first musical instruction he received was from the village schoolmaster who taught him to play the violin; subsequently he attended school at Zlonitz, where he took lessons from the local organist. After spending some time at a school in Kamienitz, and while there learning German language, he entered the organ school at Agne. His opera, *The King and the Collier*, was the first of his works to be placed on the stage. Other works are *Stabat Mater; The Spectre's Bride, &c.* In September of 1892 he removed to New York, having accepted the position of musical director of the National Conservatory of Music, but a year later returned to rope, where he has since remained.

Dwarfed Trees, planted and growing in flower pots, are common ornaments of Japanese and Chinese houses and gardens. The art of dwarfing consists in the prevention of an abundant flow of sap, so that vegetation cannot proceed actively, though the tree is kept alive and healthy. The trees are planted in narrow and shallow pots, and care is taken that their roots cannot reach the ground beneath. Water is supplied sparingly, the leading shoots are pinched off, and the branches variously bent and twisted. These and similar processes yield trees of a remarkably diminutive size, yet not unfrequently bearing an abundance of flowers and fruit.

Dwight, THEODORE WILLIAM, LL.D., jurist, educator and editor; born at Catskill, N. Y., July 18, 1822; studied at Hamilton College and Yale Law School; was professor of law in Hamilton College and the founder of a law school there. He also organized the law school of Columbia College, New York, and was professor of municipal law in that institution. From both Rutgers and Columbia Colleges he received the degree of doctor of laws, and was non-resident professor of constitutional law in Cornell University. Besides his work as an educator, he was vice-president of the New York Board of State Commissioners of Public Charities, president of the New York Prison Association, and a prominent member of the "Committee of Seventy" of the city of New York. In conjunction with Rev. E. C. Wines, D.D., he published *Prisons and Reformatories in the United States*; was also associate editor of the *American Law Register*, and published an *Argument in the Rose Will and Charity Cases, &c.* Died in Clinton, N. Y., June 28, 1892.

Dwight, WILLIAM BUCK, scientist, born in Constantinople, Turkey, May 22, 1823; went to the U. S. in 1849; studied at Yale College and the Union Theological Seminary, New York city. In 1859 he attended the scientific school at Yale and the same year became principal and proprietor of Englewood Female Institute, Englewood, N. J. He has also held the position of principal of the Officers' Family School at the U. S. Military Academy, West Point. In 1870-78 he was associate principal and instructor in natural sciences in the State Normal School at New Britain, Conn.; later was appointed professor of zoölogy in the Martha's Vineyard Summer Institute, Massachusetts, and subsequently became professor of natural history and curator of the museum in Vassar College, Poughkeepsie, N. Y. The Wappinger valley limestones of Dutchess county, N. Y., and the Taconic limestones of Canaan, N. Y., have been examined by D. and the results of his investigations published in scientific periodicals.

Dwight, in Illinois, a town of Livingston co., on the C. & A. R. R., 74 m. S.S.W. of Chicago. Has considerable local trade and some manufactures. Pop. (1897) about 1,500.

Dy'ak, *n.* See DAYAK, in SECTION I.

Dy'er, THOMAS HENRY, English historian; born in London, May 4, 1804. After the close of the commercial house in the West Indies, in which he had been a partner, he made a journey to Athens, Rome and Pompeii, and studied the ancient topography of those cities. He was the author of a *Life of Cæsar; History of Modern Europe; History of the City of Rome; Roma Regalis; A Plea for Livy, &c.*

Dye'stuffs, Coloring substances used in giving color to textile fabrics. These are of animal, vegetable and mineral origin, many of them existing ready formed, while others are obtained by chemical processes. Of D. of animal origin much the most important is *cochineal*, derived from the female of a species of insect, *coccus cacti*, its habitat being one of the Mexican cacti. This insect yields scarlets and crimsons of great brilliancy, its coloring principle being carminic acid. *Carmine*, the most beautiful of all red pigments, is composed principally of cochineal mixed with alumina and a little oxide of zinc. Other species of this genus yield useful dyes; *Coccus ilicis*, yielding *kermes*, or *alkermes*, one of the oldest red dyes for silk; and *Coccus lacæ* yielding lac. The *Tyrian purple*, once famous and costly, but no longer used, was obtained from a species of mollusk. *Galls*, produced by the sting of the gall wasp on oak leaves, yield tannic acid, which, in combination with salts of iron, yields drabs and blacks. They are the basis of most writing inks, and serve as a mordant for some of the aniline colors. *Sepiæ*, the liquid yielded by the cuttle fish, is used by artists as a water-color, but not as a dye. *Vegetable dyes*. Plants yield a great variety of D., though only a few of these are in general use. *Madder*, from the root of *Rubia tinctorum*, yields two coloring principles, known as *alizarin* and *purpurin*. These produce permanent reds, purples and chocolates, and are very useful in calico-printing. Vegetable madder, however, is now little used, being replaced by artificial alizarin manufactured from the anthracene of coal-tar. *Turmeric*, or Indian saffron (from *Curcuma tinctoria*), yields a yellow now chiefly used for yellow lacquers, for mixing with curry powder and mustard, and in dyeing wool. Another yellow much used in India is a vegetable extract named *soorango*. Among dye-yielding woods the most important is *logwood*, which contains hamatoxylin, used largely in dyeing red, purple, violet, blue and black. *Brazil-wood*, derived from several species of *Cesalpinia*, yields a rich red coloring substance called *brazilin*. *Santalum*, obtained from the sandal-wood of Ceylon and the camwood or barnwood of Africa, produces red, violet and scarlet hues. *Fustic* is a yellow dye from the *Morus tinctoria* of the West Indies, and *fustet*, or Hungarian yellow wood, from *Rhus cotinus*. Of dye-yielding barks, *quercitron*, from *Quercus tinctoria*, produces a rich yellow, which becomes a green in combination with blue

samach, obtained from the leaves of *Rhus cotinus*. They yield a yellow containing much tannic acid, and are generally used as a mordant, or with iron salts to produce blacks, etc. *Saffron*, a beautiful yellow dye, is derived from the flowers of *Crocus sativus*. Fruits yield a number of dyes. *Chrysorhamnus* and *zanthorhamnus*, yellow dyes used in calico printing, &c., are obtained from several species of *Rhamnus*; and *annato* or *annatto* from *Bixa orellana*. This is employed for coloring butter and cheese, and for yellow and orange dyes; or, mixed with red, for scarlet. *Catechu, terra japonica*, and *gambir*, come from the fruit, wood, and unripe pods of several plants of Hindustan. They contain much tannic acid, and are used with iron salts as mordants in dyeing drab and black, also in tanning skins. *Indigo* is derived from the whole plant of several species of *Indigofera*, and *woad* from *Isatis tinctoria*. These yield *indigo blue*, one of the most permanent of blue dyes.—*Chemical colors*. Various useful dyes are prepared by chemical combination, *Prussian blue* being a ferrocyanide of iron; *chrome yellow* and *orange*, chromates of lead; *Schweinfurt green*, aceto-arsenite of copper; *Guignet's green*, hydrated oxide of chromium; and *ultramarine* a compound of alumina, silica, soda and sulphur. Of D. now in use, those derived from coal-tar have in considerable measure displaced those of organic origin. Of these there are four series. The *aniline* series includes the red *rosaniline* salts, with purple, violet and blue substitution products derived from them, and various other hues. The *phenol* series includes picric acid and other nitro-coloring substances. The *azo* series embraces *chrysoidine*, *Bismarck brown*, numerous wool scarlets, &c. The *anthracene* series is represented by artificial alizarin, anthrapurpurin, alizarin orange, anthracene blue, etc.—*Dyeing*. The application of dyes to fibers and fabrics is an important process, needing careful preliminary preparation. The fibers must first be thoroughly cleansed of resinous and oily matter, so that the dye liquors may come into immediate contact with the fibers. This is done by processes of boiling, treating with dilute acids or alkalis, washing, etc. The method of applying the dye differs according to the nature of the fiber and the particular dye-stuff employed. Loose materials are dyed by immersion in the liquor in tubs or vats; yarn is hung over sticks and immersed in the dye, being turned from time to time; pieces of woven fabric are dyed in a continuous dyeing machine, divided into a series of compartments which contain the necessary D. and mordants. Some colors, known technically as *substantives*, readily combine with the fibers, silk and wool taking up colors much more readily than cotton and linen. Many of the aniline colors are substantives, and the operation of dyeing with them is very simple, a mere immersion in the dye liquor being required. In some cases agents, known as *assistants*, are used to fix or set the color, or to give a more uniform tint. These embrace acids, alkalis, alum, &c. With *adjective* dyes, those which will not combine directly with the fibers, mordants must be used. These are substances having an affinity for the colors, and which can be fixed in an insoluble condition on or in the fibers. They include various metallic oxides or salts, tannic acid, &c. Mordants often affect the natural tints of the dyes, thus rendering it possible to obtain several shades with the one dye. In this oxide of iron is particularly effective, changing the red color of logwood, &c., to various shades, merging into black if used in large proportion. Oxide of tin brightens the tints, while alumina fixes them in their natural shades. The acetates of alumina, iron and chromium are easily decomposed, a portion of the acetic acid being released and an insoluble basic acetate formed. When cotton is boiled in solutions of these substances, its fibers become thoroughly impregnated with the insoluble compound. When the yarn is now transferred to the dyeing vat the color unites with the mordant, forming insoluble colored substances, which are called *lakes*, in and on the fibers, which are in this way permanently dyed. Various other methods are employed, all leading to the same result. Thus fibers or fabrics may be dyed in the dyestuff alone, or with an assistant; in the dyestuff with a mordant added; immersed first in the mordant and afterward in the dyestuff; first in the dye and afterward in the mordant; successively in the mordant, the dye, and the mordant; or the color may be produced directly upon the fibers, as in the case of some azo-reds.

Dykes, JOHN BACCHUS, musician and clergyman, born at Hull, Eng., March 10, 1823; graduated from Cambridge, was ordained (1847), and appointed precentor at Durham Cathedral (1849); received the degree of Mus. Doc. (1861) from the University of Durham, and the next year became vicar of St. Oswald's, in that city. His compositions for the services of the Anglican church are many and excellent.

Dynamite, [Gr. *dyamis*, strength.] (*Chem.*) An explosive produced by the mixture of nitro-glycerine with a silicious infusorial earth known under the German name of *Kieselguhr*. Nitro-glycerine, which consists in a combination of glycerine with a mixture of strong nitric and sulphuric acids, was discovered by Solviero in 1846, but for twenty years its dangerously explosive character stood in the way of its safe employment, until the Swedish chemist, Alfred Nobel, produced a combination with the inert absorbent earthy substance above named. The result of these experiments has been to place D. as the compound was named, on a basis of great practical and commercial importance. This may be judged from the fact that in 1870 only about 11 tons of D. were produced in the world, while twenty years later the annual output of nitro-glycerine products was not less than 12,000 tons. *Kieselguhr* is

the mineral product of a species of algæ whose stem consisted chiefly of silica, the shape of the stem being retained after the organic material had disappeared. Beds of it are found in many countries, underlying peat. This material is calcined in a kiln to remove water and organic matter, then ground and sifted. It then contains about 98 per cent. of pure silica. This substance was adopted as the basis of *D.* after experiments in mixing nitro-glycerine with many other materials, such as charcoal, sawdust, brickdust, rags, paper, &c., none of which proved satisfactory. *D.* consists of 1 part of kieselguhr to 3 parts of nitro-glycerine, and is of a reddish-brown color, its specific gravity varying from 1.59 to 1.65. It burns with a yellowish flame, and without danger if used in small quantities; but when fired with a detonating fuse explodes with extreme violence. The freezing point is about 40° F., and, like nitro-glycerine, it is more difficult to explode when frozen, though many serious accidents have arisen from incautious thawing. The violent nature of its action is due to the rapidity with which the explosion takes place, which, in the case of a dynamite cartridge, is estimated to occupy only the 24,000th part of a second. *D.* is much employed in breaking up boulders and heavy metal castings, in removing the roots of trees, &c. It loses only 6 per cent. of its power under water, and is therefore much employed in sub-aqueous operations. Loose tamping, as with sand or water, is sufficient, and bore-holes are often quite dispensed with, the *D.* being laid on the surface of the substance and covered with sand or clay. *D.* is not very suitable for quarrying purposes, the rock being too greatly shattered; gunpowder, though requiring a larger quantity and more blowholes, is generally used instead.—In *D.* manufacture the greatest care is necessary, and with all care serious accidents sometimes occur. The various processes are carried on in isolated buildings. Nitric and sulphuric acid having been mixed, the temperature being kept low by the use of cold water and compressed air, the acids are run into a large leaden tank, where they are further cooled and glycerine injected by means of compressed air. This is a dangerous process and needs to be very carefully performed. The nitro-glycerine is next drawn off and washed in an alkaline solution to remove any excess acidity, and is then incorporated with the kieselguhr in the proportions named. It is then made up into cartridges from 1 to 7/8 inch diameter and about 3 1/2 inches long, these being wrapped in vegetable parchment and packed in boxes covered with waterproof oil-paper. The legal regulations both as to the storage and transport of *D.* are very stringent. *D.* has unhappily proved available for purposes of destruction, and many instances of outrage in the blowing up of buildings, and the massacre of political and other enemies by its use are on record. Irish malcontents and European anarchists have frequently used it for destructive purposes, and America has not escaped. The most notable instance was the assassination of the Emperor of Russia by means of a dynamite bomb (1881).

Dynamite Gun. (*Ordnance.*) A gun for throwing dynamite for explosion at a distance, pneumatic power being used for the purpose. Such a gun was patented by Mefford in 1883, and improved by Zalinski. An experimental gun was made in New York and tried at Fort Hamilton in April, 1884, the experiments being conducted by Col. John Hamilton and Lieut. E. L. Zalinski. The gun was a tube 40 feet long, with a bore 4 inches in diameter. A large steel cylinder filled with compressed air formed the discharging apparatus. The experiment proved entirely successful. In 1887 such a gun, 8 inches in diameter, was fired at a vessel 2,000 yards off, which was struck and completely destroyed by a shell charged with 55 lbs. of dynamite. The barrel of the gun consists of 3/8-inch iron lined with a 1/8-inch brass tubing. The projectile was exploded by an electric fuse so adjusted as to act an instant before or after impact, this enabling it to produce the greatest effect. In consequence of this success a cruiser, the *Vesuvius*, was built to carry three dynamite guns. In 1888 a U. S. naval lieutenant invented a dynamite shell capable of being fired with gunpowder from an ordinary breech-loading gun. It is lined with asbestos cloth, and carries a number of pellets of dynamite, each wrapped in paraffined paper. A test of these dynamite guns was made on Dec. 9, 1895, at the mouth of San Francisco harbor, three 8-inch shells being thrown 1,500, 2,000, and 2,500 yards respectively, and one, carrying 150 lbs. of dynamite, being thrown two miles. Great accuracy was attained and the tests were in every way satisfactory.

Dynamo. Same as DYNAMO-ELECTRIC MACHINE.

Dynamo-electric Machine. To the dynamo all the recent great advances in electric engineering have been due; therefore, to it we owe the electric light, electric railway, and numerous other applications of electric power. Recent as has been its employment for these purposes, there is nothing recent in the knowledge of its principle. This was made by Faraday in 1831, when he discovered that when a conductor is moved across the pole of a magnet an electric current is induced in it. Thus, if a coil of wire, whose ends are connected so as to form a closed circuit, be suddenly withdrawn from the pole of a magnet, a transient electric current appears in it. If it be returned, a current in the opposite direction appears. The discovery of this principle quickly gave rise to a number of what were called magneto-electric machines, in most of which a steel horseshoe magnet was made to rotate over a pair of coils wound on a fixed armature, or the armature made to rotate over a fixed magnet. These contained

the whole principle of the dynamo, though much needed to be done in its practical development. It was soon perceived that electro-magnets might replace the permanent steel magnets; and in 1867 it was learned that these magnets might be excited by the current induced by themselves. Even when the cores of the electro-magnet are of soft iron, enough residual magnetism continues in them to excite a feeble current in the revolving coil. If this current be sent through the coil of the magnet its power becomes strengthened and the induced current grows stronger, and in this way the magnetism is stage by stage increased until its maximum force is attained. The principle of self-excitation is now employed in all but the smallest machines. To it the name of dynamo-electric was applied, a term now given to all forms of these machines. The dynamo reached the first stage in its important commercial development in 1870, when Gramme invented a form of armature which gave a current continuous in direction and sensibly uniform in strength. This consisted of a ring-shaped iron core, revolving in the magnetic field, on which were wound a connected series of coils. In these coils, as the ring revolved, a rapidly succeeding series of currents in opposite directions were induced. These were made to move in the same direction by means of a device called the commutator, which revolved with the ring, and from which the current was taken by wire brushes in such a way that the direct and reversed currents were given the same direction in the receiving wire, and a continuous current of practically uniform strength was produced. One further device became necessary. It would not do to have the core of the armature solid, since in that case currents would be induced in it which would weaken those in the coils. Hence the core was made up of many turns of soft iron wire, on which the coils of insulated copper were wound. Armature cores are now usually made of thin plates insulated from each other. The value of the iron core is in its influence in strengthening the magnetic field through its inductive energy. In 1856 Siemens produced an armature consisting of a coil of many turns

Fig. 2822.—EDISON DIRECT-ACTING DYNAMO.

wound longitudinally on an iron core, the ends of the coil being brought to a commutator so as to produce a current in one direction. This current, however, varied in strength from zero to a maximum twice in every revolution. In 1872 Allenek improved the Siemens armature by dividing the single coil into many sections, each in a different plane. These sections were connected in series and their ends brought to a commutator, as in the Gramme ring; but the new arrangement yielded a practically continuous current, the commutator taking the current successively from those sections of the coil which were most highly excited. This arrangement yielded what is known as the drum armature. Both these forms of armature are in use, their electrical effects being the same. The ring type is most largely employed, from convenience in construction, but the drum type is in use on some of the best machines. Various other forms of armature are in use, such as the disk, the pole, and the spherical armature. The latter, in which the coil is wound on the surface of an iron sphere, is the form employed in the Thomson-Houston machine. In the early machines the whole current was passed through the coils of the magnet, but at present only a portion of the current is usually thus employed, though the former method is still extensively used for electric lighting by arc-lamps. In most dynamos the field magnets form the simplest magnetic circuit possible, having two poles which stand at opposite sides of the commutator; but in some cases four or more poles are used, spaced at equal intervals around the dynamo, which then assumes a disk-like shape.—*Alternate current dynamos.* In the machines known by this title the armature usually consists of a group of coils, joined in parallel or series, attached to a disk which revolves in the space between a corresponding group of pairs of magnet poles; so that rapidly alternating transient currents are induced as the coils pass the poles. These currents pass outward through a single collector, no commutator being used. Many forms of dynamos of this type are in use. These possess a special

importance from their use in connection with transformers in electric lighting, and are made for the purpose of great size and power. The primary purpose of a dynamo is to convert mechanical into electrical energy, the armature of the machine—or in some cases the magnets—being caused to revolve by steam power, which is desired to convert as fully as possible into electric energy. There are certain sources of loss which cannot be avoided; but in good machines 90 per cent., or even more, of the driving power is preserved.—*Motors.* Dynamos of the kind described are known as *generators*. The type known as *motors* are identical in principle, they simply reversing the action of the generators and converting electrical into mechanical energy. As a revolving magnet causes an electric current to flow in the wire coils of the armature, so a current, passing through the coils of a second armature, causes the associated magnet or magnets to revolve, and this with a force which gives motion to connected machinery. Such a secondary dynamo constitutes a motor and reconverts the electrical into mechanical energy. A familiar example of its effects is in the vigorous movement of the electric street car or trolley. Faraday was the first to show that such a reverse process is possible, and various magneto-electric engines were devised, capable of doing work on a small scale, but it was not until after the invention of the Gramme machine that the full significance of this principle was perceived. It was then observed—by accident, as are told—that the action of the dynamo is reversible and that the same machine which converts mechanical power into electric energy may re-convert the latter into mechanical power. Power produced at a central station may be conveyed to a distance by wires and converted into power. The second dynamo may be the counterpart of the first, but it is often made different for the sake of lightness or other reasons. This principle promises to be of the utmost advantage in the future of mechanical industry. Already a portion of the power of the Niagara river is conveyed to a distance and forced to run machinery, and in time to come we may power generally may be thus utilized. In addition to the mechanical advantages, that of the electric furnace must be taken into consideration. The intense heat which may be obtained from the dynamo current permits chemical and other results to be produced which are quite beyond the reach of other sources of heating and furnace action. See ELECTRIC MOTORS.

Dysodia (*de-so'de-ah*). [From Gr. *dys*, bad, and *ozo*, I smell.] (*Med.*) Fetid emanations from the nose, lungs, stomach, axillæ, groins, &c. They indicate bad blood and foul secretions, imperfect depuration, retained faecal matters, &c. Judicious bathing and proper dietary, with sufficient exercise in the open air, will assist in removing this trouble.

Dyspnoea, Dysphonia. *n.* [Gr. *dys*, bad, and *pneo*, I breathe.] (*Med.*) An embarrassed or laborious breathing. It is owing to a disturbance of the natural and healthy relation that ought to subsist between the quantities of blood and air in the lungs. When the quantity of atmospheric air that reaches the lungs is by any means diminished, or when there is more venous blood sent to the lungs than can be realized under the ordinary modes of inspiration, or if instinctive efforts are made to increase the quantity of air by increasing the number of acts of inspiration. Hence, dyspnoea may arise from a number of causes, as, croup or laryngitis, diminishing the only inlet for the air; pressure upon the lung, or any other muscle by which its size is diminished, or it is rendered spongy; or by increased action of the heart. The physician has thus to decide, in such case, whether the heart or the lungs be at fault, or both, or neither, and to prescribe accordingly.

Dyticidae, n. pl. (*Entom.*) A family of coleopterous insects, the Water-beetles, or Whirligig-beetles. They are pentamerous coleoptera, that is, have all the tarsal joints. Their general form is oval. The respiratory organs of the perfect insect are not adapted to the traction of air from water, and it must occasionally come to the surface to breathe, where it rests for a short time, back downward, and with the extremity of the abdomen exposed to the air, the openings of the tracheæ being in the last segment. The *D.* are exclusively voracious, feeding upon any kind of animal food, and bodily attacking creatures larger than themselves. They are very amusing inmates of the fresh water aquarium, and sometimes live in it for a year or two, getting tame, and readily coming to be fed with small earth-worms, bits of beef, &c. The species are numerous, and vary much in size, some being very small, and some almost 2 inches in length. Fig. 2823 represents one of the largest species, the *Hydaticus interruptus*, belonging to a genus of the *Dyticidae*. The species are found in lakes, ditches, marshes, and still parts of rivers. They often leave the water by night, and can fly well. Their larvæ have the body long, tapering, composed of eleven rings or segments, the head being at the front. They hide themselves in the earth, in numbers which they make for themselves, before changing into pupæ.

Fig. 2823.—A WATER-BEETLE. (*Hydaticus interruptus*.)

E.

EAGL

EAGL

E The fifth letter and second vowel in the Roman alphabets. In the Greek alphabet, the slender E (Εϋλον) is the 5th letter, and the long E (Ητα) is the 7th letter, or the 8th, if the stigma be included. In English it has five sounds: long, short, open, obtuse, and obscure, as in *me, men, there, her, and brier*. As a final letter it is generally silent, but serves to lengthen the sound of the preceding vowel, or, at least, to indicate that the preceding vowel is long. In German, *e* is long, like the English *a* in *fate, in reden, predigen*; short like *e* in *met, in recht, rennen*; and very short, or almost silent, in *hoffen, haben*. The long English sound corresponds to the French and German *i*, while the French nasal *E* in *em* and *en* sounds as the English *a* in *swan*; and the French sharp *E* is represented in English by *a, ai, ay, or ey*, as in *maide, maid, say, they*. The figured *E* is supposed by some to have been taken from the base of the nose, ϕ , its sound being symbolic of breathing, and hence of life. Among the Greeks, *E*, as a numeral, represented 5, and with a mark below it, 5,000. In the calendar, *E* is the fifth of the dominical letters. As an abbreviation, *E* stands in Latin for *eques Romanus, egregius, emeritus, esq, elitio*; and in English for *east, electricity, and excellence*. On Prussian coins it designates Königsberg; on those of Austria, Carlsburg in Transylvania; and on those of France, Tours. In syllogisms, *A* = *assertio, E* *negat*.

(Mus.) The 3d note or sound of the natural diatonic scale, or the 5th string in the chromatic scale;—called *me* in vocal music.

E, a Latin prefix; same as *Ex, q. v.*

Each, (*ech*), *a.* [A. S. *ælc*; Scot. *ilk*; Dan. *elk*; A. S. *eka*.] Every one of each number separately considered or treated; either of two.

Each other, used in a correspondent sense, whether of two or of a greater number.

"'Tis said they eat each other."—*Shaks.*

Ead'ish, *n.* Same as *EDDISH, q. v.*

Eager, (*ē'ger*), *a.* [Fr. *aigre*; Lat. *acer, acris*; W. *egr.*] Ardent; excited by fervent desire in the pursuit of any object; ardent to pursue, perform, or gain; inflamed by desire; earnestly wishing or longing; vehement; hot; impetuous; fervent; zealous; impatient.

"My soul's in arms, and eager for the fray."—*Cibber.*

—Sharp; keen; severe; hitting.

"It is a nipping and an eager air."—*Shaks.*

—Brittle; not ductile; inflexible; as, *eager* gold.

Ea'ger, *n.* Same as *BORE, q. v.*

Ea'gerly, *adv.* Ardently; earnestly; impatiently; with prompt zeal; impetuously; with great ardor of desire or inclination; keenly; as, to run *eagerly* to receive money.

Ea'gerness, *n.* Quality or state of being eager; ardent desire to do, pursue, or obtain anything; animated zeal; vehement longing; earnestness; keenness; avidity.

"The mutual warmth and eagerness of love."—*Addison.*

Eagle, (*ē'gl.*) *n.* [Fr. *aigle*.] (*Zoöl.*) See *AQUILINE*.

(Hist.) The eagle was borne as a standard by many nations of antiquity. The first who assumed it, according to Xenophon, were the Persians; it was used by the Romans at an early period of their history, but was first adopted as their sole ensign in the consulate of C. Marius, (*Pliny*, x. 4.) The Roman eagles were gold or silver figures in relief, about the size of a pigeon; and were borne on the tops of spears, with their wings displayed, and frequently with a thunderbolt in their talons. When the army marched, the eagle was always visible to the legions; and when it encamped, the eagle was placed before the prætorium or tent of the general. The eagle on the summit of an ivory staff was also the symbol of the consu-

Fig. 891.—ROMAN EAGLE.

lar dignity. In modern times the United States, Prussia, Austria, Russia, and France have adopted the eagle as a national military symbol. Eagles are frequently found on ancient coins and medals; especially on those of the Ptolemies of Egypt and the Seleucide of Syria.

(Her.) The eagle is an emblem of fortitude and magnanimity; it is particularly assumed by sovereigns as the emblem of empire from having been borne on the legionary standard of the ancient Roman. The U. S. has adopted the Bald Eagle *Haliaetus pelagicus*, the largest species of fishing or sea-eagles, which is very largely distributed over North America, and is remarkably noble in aspect. (Fig. 892.) The eagle of Russia is *or*, with two heads displayed, sable, each ducally crowned of the field; the whole imperially crowned, beaked, and membered, gules. The eagle of Austria is also displayed with two heads; the Prussian eagle has one only.

(Coins.) A gold coin of the U. S., which for all sums whatever is a legal tender of payment for ten dollars. It weighs 258 grains of standard fineness; that is to say, of 1,000 parts by weight, 900 shall be of pure metal, and 100 of alloy consisting of silver and copper. See *DOLLAR*, and *HALF-EAGLE*.

(Orders of knighthood.) The order of the Black Eagle of Prussia was founded by Frederick I., on his coronation day, Jan. 17, 1701. The number of knights, in addition to the princes of the royal family, was originally 30, but it is now unlimited. They must prove their noble descent for 4 generations through both parents. The insignia of the order consists of an octagonal cross of blue enamel, and a black eagle, displayed between each of the arms of the cross. The cross is suspended by a broad ribbon of orange color across the left shoulder, and it is accompanied by an embroidered silver star fastened on the left breast. The *B. E.* being the highest order in Prussia, no member of it, with the exception of foreign princes and knights of St. John, is permitted to wear any other order along with it; and as it is generally granted only to those who are expected to be about the person of the king, no one who holds it is permitted to travel from the court more than twenty German miles without giving notice.—The order of the *Red Eagle*, or of *sincerity*, was founded in Prussia by George William, hereditary prince of Anspach and Bayreuth, in 1705; and reorganized by George Frederick Charles, July 13, 1734. In 1791 Frederick William II. erected this into the second Prussian order, and it was reorganized in 1810 and 1830. The decoration consists of a white enamelled Maltese cross, surmounted by a royal crown,

ARMS OF PRUSSIA.

Fig. 894.—RIBBON AND CROSS OF THE ORDER OF THE BLACK EAGLE.

with the Brandenburg eagle in the corner. In order to be received into the black, it is necessary to have been, in the first instance, decorated with the White Eagle.

(Astron.) See *AQUILA ET ANTINUS*.

Ea'gle, in *Illinois*, a village and township of La Salle co., about 15 m. S.S.W. of Ottawa.

—A precinct of Monroe co.

Eagle, in *Iowa*, a village of Bremer co.

Eagle, in *Indiana*, a township of Boone co.

Eagle, in *Michigan*, a post-township of Clinton co., about 15 m. W. by N. of Lansing.

Eagle, in *Minnesota*, a village of Sibley co., about 20 m. W. by S. of Henderson.

Eagle, in *Missouri*, a former post-office of Harrison co.

Eagle, in *New York*, a township of Wyoming co., about 15 m. S.S.W. of Warsaw.

Eagle, in *Ohio*, a township of Brown co.

—A township of Hancock co., about 82 m. N.W. by N. of Columbus.

—A township of Vinton co.

Eagle, in *Pennsylvania*, a post-office of Warren co.

Eagle, in *Wisconsin*, a township of Richland co.

—A post-village and township of Waukesha co., abt. 36 m. W.S.W. of Milwaukee.

Eagle Bridge, in *New York*, a P. O. of Rensselaer co.

Eagle City, in *Minnesota*, a village of Washington co., about 18 m. N.E. of St. Paul.

Eagle City, in *Oregon*, a village of Union co.

Eagle Cliff, in *Georgia*, a post-office of Walker co.

Eagle Cliffs, in *Illinois*, a village of Monroe co., on the Mississippi River, abt. 115 m. S.S.W. of Springfield.

Eagle Creek, in *Indiana*, rising in Boone co., and after a general S.E. course enters the W. Fork of White River below Indianapolis, in Marion co.

—A post-township of Lake co.

Eagle Creek, in *Minnesota*, a village and township of Scott co., on the Minnesota River, about 22 m. S.W. of St. Paul.

Eagle Creek, in *Ohio*, enters Blanchard's Fork at Findley, in Hancock co.

—Another, enters the Ohio River, near Ripley, in Brown co.

Eagle Creek, in *Oregon*, traverses Union co., and enters the Powder River, about 50 m. E. of La Grande.

—A post-office of Clackamas co.

Eagle-eyed, (*ē'gl-id.*) *a.* Sharp-sighted as an eagle; having an acute or penetrating sight; discerning; possessing acute intellectual vision.

Eagle Foundry, in *Penn.*, a P. O. of Huntingdon co.

Eagle Furnace, in *Tennessee*, a post-village of Roan co., about 140 m. E.S.E. of Nashville.

Eagle Grove, in *Georgia*, a post-office of Hart co.

Eagle Grove, in *Iowa*, a fine city of Wright co., 90 m. N. of Des Moines. Pop. (1897) about 3,100.

Eagle Harbor, in *Mich.*, a village of Houghton co. of Lansing. It is in the vicinity of some very rich copper mines.

Eagle Harbor, in *New York*, a post-village of Orleans co., abt. 57 m. E.N.E. of Buffalo.

Ea'gle-hawk, *n.* (*Zoöl.*) The English name of the

Fig. 895.—THE CRESTED EAGLE.

genus *Morphnus*, or *Spizaetus*, family of *Falconidae*, including eagles of comparatively small size, and characterized by short wings, long slender legs (tarsi), and comparatively feeble toes and claws. They are natives of warm climates, chiefly of South America. The Crested Eagle, *Morphnus cristatus* (fig. 895) of Guiana, may be given as type of the genus.

Eagle Hill, in *Kentucky*, a post-office of Owen co.

Eagle Island, off the coast of Connaught, co. of Mayo, in Ireland, about 4 m. W.S.W. of Erris-head. It has 2 light-houses, Lat. 54° 7' N., Lon. 10° 6' W.

Eagle Island Point, in *Maine*, a light-house marking the N.E. entrance into Penobscot Bay.

Eagle Lake, in *Illinois*, a post-office of Will co.

Eagle Lake, in *Texas*, a post-town of Colorado co.

Eagle Lakes, THE, in *Maine*, lying in Aroostook and Penobscot cos.

Eagle Mills, in *North Carolina*, a township of Iredell county.

Eagle Mills, in *New York*, a P. O. of Rensselaer co.

Eagle Mills, in *Ohio*, a post-office of Vinton co.

Eagle Mills, in *Wisconsin*, a township of Buffalo co., on the Mississippi River.

Eagle Mountain, the highest of the Mourne Mountains, in Ulster, co. Down, Ireland. It is about 2,084 feet high.

Eagle Pass, in *Texas*, a city, cap. of Maverick co., on the Rio Grande river and So. Pac. R.R., 140 m. S.W. of San Antonio; the trade center of a stock raising district. Pop. (1897) about 2,500.

Eagle Point, or ELKHORN GROVE, in *Illinois*, a post-village of Ogle co., about 100 m. N. of Peoria.

Eagle Point, in *Pennsylvania*, a P. O. of Berks co.

Eagle Point, in *Wisconsin*, a township of Chippewa co.

Eagleport, in *Ohio*, a village of Morgan co., on the Muskingum River, about 18 m. S. of Zanesville.

Eagle-ray, *n.* (*Zool.*) A large species of ray-fish, the miller, *Milliobatis aquila*.

Eagle River, in *Kentucky*, rises in Scott co., flows N.W. through Owen co., then S.W. between Owen and Carroll cos., into the Kentucky River.

Eagle River, in *Michigan*, a post-village, cap. of Keweenaw co., on Lake Superior, about 375 m. N.W. of Lansing.

Eagle River, in *Wisconsin*, rises in Richland co., and flows S. into the Wisconsin River.

Eagle Rock, in *N. Carolina*, a post-village of Wake co., about 14 m. E. of Raleigh.

Eagle Rock, in *Pennsylvania*, a post-office of Venango co.

Eaglesfield, in *Indiana*, a post-office of Clay co.

Eagle's Mere, in *Pennsylvania*, a P. O. of Sullivan co.

Eagle's Nest, THE, a rock in Munster, co. Kerry, Ireland, between the Upper and Middle Lakes of Killarney, and about 4 m. S.W. of Killarney. It is 1,300 feet high, and almost perpendicular.

Eagle-sighted, *a.* Having a penetrating sight.

Eagless, *n.* A female eagle.

Eagle-stone, *n.* (*Min.*) A variety of argillaceous iron ore, having a concentric structure, and occasionally so decomposed as to contain a loose kernel, that rattles when shaken. It derives its name from the fancy entertained by some, that the stone was the egg of the eagle, the internal nodule being the embryo eaglet.

Eaglet, *n.* A young or diminutive eagle.

Eagletown, in *Indiana*, a post-village of Hamilton co., about 21 m. N. of Indianapolis.

Eagletown, in *Indian Territory*, a village of the Choctaw Nation, about 160 miles W.S.W. of Little Rock, Ark.

Eagle Village, in *Indiana*, a village of Boone co., about 14 m. N.W. of Indianapolis.

Eagle Village, in *New York*, a post-village of Wyoming co., about 38 m. S.E. of Buffalo.

Eagleville, in *Connecticut*, a post-village of Tolland co., on the Willimantic River, about 22 miles E. of Hartford.

Eagleville, in *Ohio*, a post-village of Ashtabula co., on Mill Creek, about 200 m. N.E. of Columbus.

Eagleville, in *Pennsylvania*, a village of Centre co., on Bald Eagle Creek, about 100 m. N.W. of Harrisburg. —A post-office of Montgomery co.

Eagleville, in *Tennessee*, a post-village of Williamson co., about 30 m. S. of Nashville.

Eagleville, in *Wisconsin*, a village of Milwaukee co. —A village of Waukesha co., about 36 m. W.S.W. of Milwaukee. See EAGLE.

Eagle-wood, *n.* The fragrant wood of *Aloexylon agallochum*, used by the Asiatics for burning as incense.

Eagre, (*Égér*), *n.* A tidal phenomenon seen in estuaries. See BORE.

Eakin, in *Pennsylvania*, a P. O. of Alleghany co.

Eal'derman, *n.* Old spelling of ALDERMAN, *q. v.*

Ean, *v. a. or n.* See YEAN.

Eau'ling, *n.* See YEANLING.

Ear, *n.* [*A. S.* ear, *æhher*; *D. aar*; *Ger. ähre*.] A spike of grain; as, "The corn is in the ear." —*Lady Dufferin*. —*v. n.* To form ears, as corn; to shoot into spike-like processes.

Ear, *v. a.* [*A. S.* erian; *Gr. arōō*; *High Ger. erren*, to plough; *Icel. ar*, ploughing.] To plough; to till; to cultivate the soil by cutting and turning over.

"The field of love, with plough of virtue ear'd." —*Fairfax*.

Ear, *n.* [*A. S.* eare; *Ger. ohr*; *Icel. eyra*; *Gr. ouis*; *Ar. uzn*, the ear] The organ which gives the faculty of hearing to both men and animals, by which sound is perceived; and, in general, both the external and internal part is understood by the term. (See below, *q. Anat. and Physiol.*)

—The power of distinguishing sounds, and judging of harmony; as, a fine ear for music.

"She has a delicate ear, and her voice is music." —*Richardson*.

—A favorable hearing; heed; attention; regard; disposition to like or dislike what is heard.

"Give every man thine ear, but few thy voice." —*Shaks.*

—Anything resembling an ear or ears; as, the ears of a water-can.

About the ears, near at hand; close to; in neighborhood. —*By the ears*, in close contact or proximity; —hence, to set by the ears, to be by the ears, to quarrel; to squabble; to fight; to contend; to scuffle.

"A mean rascal sets others together by the ears, without fighting himself." —*L'Estrange*.

Up to the ears, deeply involved; extremely absorbed; nearly overwhelmed; as, to be up to the ears in debt.

"Up to the ears in love with a fine lady." —*L'Estrange*.

(*Anat. and Physiol.*) As it exists in man and mammalia, the ear consists of three parts: the external ear, the middle ear, or tympanum, and the internal ear, or labyrinth. The external ear consists of an expanded, trumpet-shaped, cartilaginous structure, called the pinna or auricle, which collects the sounds, and a tube which conveys these sounds to the internal ear. (Fig.

Fig. 896. — THE EAR.

A, External Cartilage. B, Auditory Passage. C, Tympanum and Eustachian Tube. D, Stapes, Incus, and Malleus. E, Semicircular Canals. F, Cochlea or Shell.

896.) The pinna or auricle consists of an uneven piece of yellow cartilage, covered with integument, and fixed to the margin of the meatus auditorius externus. It is of an oval form, with the margin folded, and the larger end placed upward. The round, rim-like margin is called the helix, the depression immediately within which being the groove or fossa of the helix. Within the latter is a large elevation, called the antihelix, which presents at the upper part a well-marked depression — the fossa of the antihelix. In the centre of the pinna is a deep hollow, named the concha, which conducts to the opening of the meatus auditorius. In front of that hollow is a projection of a triangular shape, called the tragus; and on the opposite side of the hollow, rather below the level of the tragus, is another projection — the antitragus. Inferiorly, the pinna is terminated by a soft, pendulous part, called the lobule. The auditory canal, meatus auditorius externus, or the tube by which sound is conveyed from the pinna to the internal ear, or tympanum, is about 1¼ inches in length, and is formed partly by bone, and partly by cartilage and membrane. Its direction is obliquely forwards and inwards, and is somewhat bent downwards towards the middle, so that it is rather higher there than at either extremity. In shape it is rather flattened from before backwards, and it is narrowest at the bent part. The cartilaginous portion is about half an inch in length, and is formed by the cartilage of the concha and tragus being projected inward to the circumference of the auditory passage, to which it is firmly attached. The osseous portion is about three quarters of an inch in length, and is narrower than the cartilaginous part. Its outer extremity is dilated, and rough in the greater part of its circumference, for the attachment of the cartilage of the pinna. The inner end is less dilated than the outer, and is sloped, so that the anterior wall juts out beyond the posterior by about two lines; it is marked, except at its upper part, by a narrow groove, for the insertion of the membrana tympani. The skin lining the auditory canal is very thin, and is continued over the membrane of the tympanum in the form of a thin pellicle, forming its outer covering. Around the entrance of the meatus are some fine hairs; and there are also ceruminous glands which secrete the ear-wax, and open on the surface by separate orifices. The middle ear, or tympanum, is an irregular cavity situated within the petrous bone, and interposed between the meatus auditorius and the labyrinth or inner ear. It is filled with air, and communicates with the pharynx by the Eustachian tube. It is traversed by a chain of small movable bones, which connect the membrana tympani with the labyrinth, and serve to convey the vibrations communicated to the membrana tympani across the cavity of the tympanum to the internal ear. The outer boundary of the cavity is formed by the membrana tympani, and by a small portion of the surrounding bone. This membrane is a thin, semi-transparent substance, nearly oval in form, separating the cavity of the tympanum from the bottom of the auditory canal. It is placed obliquely across the meatus, or at an angle of

about 45 degrees, its outward plane looking downwards. The Eustachian tube is the channel through which air is conveyed from the pharynx to the tympanum. It is about 1½ inch in length, and is directed downwards and inwards to the pharynx. Like the meatus auditorius, it is partly osseous and partly cartilaginous in texture. The small bones or ossicles of the tympanum are three in number (fig. 897) — the malleus, incus, and stapes. The malleus, or mallet, consists of a head, neck, handle, and two processes, a long and a short. The incus, so called from its resemblance to an anvil, but which rather resembles a molar-tooth with two fangs, one of them longer than the other, and bent to one side, consists of a body and two processes. The stapes, or stirrup, consists of a head, neck, two branches, and a base. These small bones are connected together, and with the tympanum, by ligaments, and moved by small muscles. The handle of the malleus is attached externally to the membrana tympani; its head articulates with the body of the incus. The shorter process of the incus is received into an aperture of what are termed the mastoid cells, the long process curving downwards and ending in a rounded convex point, where it articulates with the head of the stapes. This last has a horizontal position, with the crura or branches directed forwards and backwards; and its base is fixed over the fenestra ovalis of the internal wall of the tympanum. This is a reniform opening leading from the tympanum into the vestibule the opening being closed by the delicate lining membrane common to both cavities. The inner and fundamental portion of the organ of hearing is called the labyrinth, and consists of three parts — the vestibule the semicircular canals, and the cochlea. It consists of a series of cavities channelled out of the substance of the petrous bone, communicating externally with the cavity of the tympanum, and internally with the meatus auditorius internus, which contains the auditory nerve. Within the osseous labyrinth is contained the membranous labyrinth, upon which the ramifications of the auditory nerve are distributed. The vestibule is the common central cavity of the osseous labyrinth, and is placed behind the cochlea, but in front of the semicircular canals. It is somewhat oval in form, and measures about 1-5th inch in different directions, but is narrowest from without inwards. In its anterior wall is a large oval opening leading to the cochlea; and in its posterior and superior walls are five openings, by which it communicates with the semicircular canals. These are three bony canals situated above and behind the vestibule. They are of unequal length, and measure about 1-20th inch in diameter; but the ends of each are dilated just before opening into the vestibule, the one end in each being more dilated than the other, and called the ampulla. They describe the greater part of a circle, and all open at both ends into the vestibule the ends of two of them, however, coalescing. From difference in the direction taken by these canals, they have been named the superior and posterior vertical and the horizontal. The cochlea, so named from its resemblance to a snail's shell, is conical in form, and placed almost horizontally in front of the vestibule. Its length is about ¼ inch, and its width at the base about the same. It consists of an axis or centre, of canal winding spirally round it for two turns and a half from the base to the apex, and of a delicate lamina contained within the canal, which follows its winding and subdivides it into two passages. When measured along the outer side, the canal is about 1½ inch long, and its diameter at the beginning about 1-10th inch, but gradually diminishing to half that size towards the other end. The whole inner surface of the labyrinth including the semicircular canals and the passages of the cochlea, is lined with a thin fibrous membrane, the outer surface of which adheres closely to the bone, while the inner is covered with a single layer of epithelium like that on serous membranes, and secretes a thin serous fluid, called the liquor cotunnii, or perilymph. This fluid fills the passages of the cochlea, and surrounds the membranous labyrinth. This last is a membranous structure inclosed within the osseous labyrinth, and separated from its lining membrane by the perilymph. It is confined to the vestibule and semicircular canals having the general form of the surrounding bony part, and is composed of a closed sac with rather a compl-

CAVITY OF THE TYMPANUM, OSSICULA AUDITUS, AND THEIR MUSCLES. (Magnified.)

a a, cavity of the tympanum; b, membrana tympani, or rather the osseous circle to which it is attached; c, handle of the malleus, resting on the middle of the membrana tympani; d, head of the malleus, articulating with the incus; e, long handle of the malleus, passing into the crenoidal fissure (the anterior muscle of the malleus is attached to it); f, internal muscle of the malleus; g, anvil; h, lenticular bones; i, stapes; k, musculus stapedius.

The malleus, or mallet, consists of a head, neck, handle, and two processes, a long and a short. The incus, so called from its resemblance to an anvil, but which rather resembles a molar-tooth with two fangs, one of them longer than the other, and bent to one side, consists of a body and two processes. The stapes, or stirrup, consists of a head, neck, two branches, and a base. These small bones are connected together, and with the tympanum, by ligaments, and moved by small muscles. The handle of the malleus is attached externally to the membrana tympani; its head articulates with the body of the incus. The shorter process of the incus is received into an aperture of what are termed the mastoid cells, the long process curving downwards and ending in a rounded convex point, where it articulates with the head of the stapes. This last has a horizontal position, with the crura or branches directed forwards and backwards; and its base is fixed over the fenestra ovalis of the internal wall of the tympanum. This is a reniform opening leading from the tympanum into the vestibule the opening being closed by the delicate lining membrane common to both cavities. The inner and fundamental portion of the organ of hearing is called the labyrinth, and consists of three parts — the vestibule the semicircular canals, and the cochlea. It consists of a series of cavities channelled out of the substance of the petrous bone, communicating externally with the cavity of the tympanum, and internally with the meatus auditorius internus, which contains the auditory nerve. Within the osseous labyrinth is contained the membranous labyrinth, upon which the ramifications of the auditory nerve are distributed. The vestibule is the common central cavity of the osseous labyrinth, and is placed behind the cochlea, but in front of the semicircular canals. It is somewhat oval in form, and measures about 1-5th inch in different directions, but is narrowest from without inwards. In its anterior wall is a large oval opening leading to the cochlea; and in its posterior and superior walls are five openings, by which it communicates with the semicircular canals. These are three bony canals situated above and behind the vestibule. They are of unequal length, and measure about 1-20th inch in diameter; but the ends of each are dilated just before opening into the vestibule, the one end in each being more dilated than the other, and called the ampulla. They describe the greater part of a circle, and all open at both ends into the vestibule the ends of two of them, however, coalescing. From difference in the direction taken by these canals, they have been named the superior and posterior vertical and the horizontal. The cochlea, so named from its resemblance to a snail's shell, is conical in form, and placed almost horizontally in front of the vestibule. Its length is about ¼ inch, and its width at the base about the same. It consists of an axis or centre, of canal winding spirally round it for two turns and a half from the base to the apex, and of a delicate lamina contained within the canal, which follows its winding and subdivides it into two passages. When measured along the outer side, the canal is about 1½ inch long, and its diameter at the beginning about 1-10th inch, but gradually diminishing to half that size towards the other end. The whole inner surface of the labyrinth including the semicircular canals and the passages of the cochlea, is lined with a thin fibrous membrane, the outer surface of which adheres closely to the bone, while the inner is covered with a single layer of epithelium like that on serous membranes, and secretes a thin serous fluid, called the liquor cotunnii, or perilymph. This fluid fills the passages of the cochlea, and surrounds the membranous labyrinth. This last is a membranous structure inclosed within the osseous labyrinth, and separated from its lining membrane by the perilymph. It is confined to the vestibule and semicircular canals having the general form of the surrounding bony part, and is composed of a closed sac with rather a compl-

form, containing a fluid called the *endolymph*. That part of the membranous labyrinth contained in the vestibule consists of two rounded portions, which, though closely connected together, appear to be distinct sacs, the larger of the two, the *utricle*, or common lins, being situated at the posterior and upper part of the vestibule; the other, the *saccul*, is smaller and rounder, and is situated in the lower and fore part of the vestibule. Small calcareous masses, consisting of minute rounded and elongated grains of carbonate of lime, are situated in the inner part of the wall of the utricle and saccul. The auditory nerve, which is distributed over the different parts of the labyrinth, enters by the meatus auditorius internus, and divides into two branches, viz., an anterior for the cochlea, and a posterior for the membranous labyrinth. The cochlear branch divides at the base of the modiolus or axis into numerous twigs, that enter the apertures in that body, whence they are directed outwards. The vestibular branch divides into three branches, which proceed to the membranous labyrinth, and ramify themselves on the walls of the sacs, some of the fine filaments passing through the otolith or calcareous mass, and others outside of it. — The sense of hearing is, strictly speaking, only a refinement of the sense of touch. The impressions with which it is conversant arise wholly from peculiar undulations, propagated in obedience to ordinary laws, in the medium in which the animal lives, and impinging more or less immediately on a sensitive part. The trumpet-like pinna or auricle of the external ear serves to collect the sound, which is then conveyed, by means of the meatus auditorius externus, to the membrana tympani. This is thrown into vibration, which is communicated to the malleus, and is carried by the incus and stapes to the membrane of the fenestra ovalis. From this last the motion is communicated to the various parts of the membranous labyrinth, taken up by the fine filaments of the auditory nerve, and conveyed to the brain. The use of the small calcareous masses in the sacs is to strengthen the sonorous undulations, and to communicate to the nerves stronger impulses than the lymph alone could impart. The range of hearing differs very much in different individuals. Sounds unperceived by some are readily heard by others. The ordinary range of human hearing, comprised between the lowest notes of the organ and the highest known sound emitted by insects, includes, according to Wollaston, more than nine octaves, all of which are distinctly perceptible by most ears. — See DEAFNESS.

Ear-ache, (*ēr'āk*), *n.* Aching pain in the ear.

Ear-bored, *a.* With perforation of the ear.

Ear-cap, *n.* A covering to protect the ears from cold; also, an envelope to protect the ears of horses from fly-bites, frost, &c.

Ear-drop, *n.* An ornament worn pendent from the ear. See EAR-RING.

Ear-drum, *n.* The drum or tympanum of the ear; a membrane of the internal ear.

Eariness, *n.* Same as EERINESS, *q. v.*

Ear-ring, *n.* (Naut.) A rope or lashing, which bends or reefs a sail to the cringle.

Earl, (*ēr'l*), *n.* [A. S. *eorl*; Dan. *jarl*. See ELDER. Originally, a title of honor among the Danes, tantamount to the modern term *alderman*.] A title of nobility, being, in degree, below a marquis, and above a viscount. It is equivalent to the French *comte* (count), Ger. *graf*, It. *conte*, and Spanish and Portuguese *conde*. The term originated with the nations of the north of Europe, who applied the title of "jarl" (pronounced *yarl*) to chieftains of the highest rank, who were appointed by the sovereign to govern large tracts of land, having the powers of a viceroy in the administration of justice, but being also under the obligation of furnishing, equipping, and maintaining a certain number of men as a contingent to the national force, and of acting as their leader when the necessities of war compelled the king to call them out for actual service. The dignity was, in fact, equivalent among the Teutonic nations to that of the Roman *comes*, or count; and the appellation was the highest title of honor that the monarch could confer. The title of *E.* remained the highest title of rank in Europe until the latter part of the 14th cent., when the duke and marquis took precedence over the earls.

Earl, in *Pennsylvania*, a township of Berks co., about 18 m. E. of Reading.

A township of Lancaster co.

Ear-lap, *n.* The tip of the ear.

Earldom, (*ēr'l-dūm*), *n.* The seignior, jurisdiction, or dignity of an earl.

Earless, *a.* Destitute of ears.

"Earless, on high, stood unabash'd Defoe." — Pope.

Disinclined to hear or listen; deaf.

Earle-ville (now **Earlville**), in *Illinois*, a city of a Salle co., on C., B. & Q. RR., 35 m. S.W. of Aurora. A farming and stock-raising region. Pop. 1,500.

A township of La Salle co.

Earle-ville, or **EARLVILLE**, in *New York*, a post-village of Madison co., on the Chenango River, about 32 m. W. of Utica.

Earle-ville, or **EARLVILLE**, in *Pennsylvania*, a village of Lancaster co.

Earliness, *n.* State of advance, forwardness, or promptness; a state of being early, or before anything, or at the beginning.

Earlston, or **Er-cildoune**, in *Scotland*, a parish of Berwick co., 7 m. from Lander; the birthplace of Thomas the Rhymer.

Earl-marshall, *n.* In *England*, one of the great officers of state, whose business it is to take cognizance of all matters relating to honor, pedigree, and military

solemnities. The office is hereditary in the family of the Dukes of Norfolk.

Ear-lock, *n.* [A. S. *ear-locca*.] A curl of hair over the ear; a love-lock.

Earlville, in *Iowa*, a post-village of Delaware co., abt. 27 m. W. of Dubuque.

Earlville, in *Ohio*, a post-office of Portage co.

Earlville, in *Pennsylvania*, a post-office of Berks co.

Early, (*ēr'le*), *a.* [A. S. *arlice*, from *ær*, sooner; Icel. *ar*, the morning; Gr. *ēar*, cont. *er*, the dawn; D. *ēer*, before.] Being before no point of time; forward; in advance of something else; prior in time; being at the beginning of the day; being in good season; timely; before the usual time; not late; as, an *early* riser, an *early* call.

"Sickness is *early* old age." — Pope.

—*adv.* Soon; in good season; betimes; as, come *early*.

Early, in *Georgia*, a S.W. co., bordering on Alabama; area, 427 sq. m. Rivers, Chattahoochee river, and Columbioka and Spring creeks. Surface, level; soil, fertile. Cap. Blakely. Pop. (1890) 9,732.

Early, in *Pennsylvania*, a former post-office of Elk co.

Early Grove, in *Mississippi*, a post-village of Marshall co., abt. 175 m. N.E. of Jackson.

Earlsville, in *Virginia*, a post village of Albemarle co., abt. 94 m. W.N.W. of Richmond.

Ear-mark, *n.* A mark made on a sheep's ear, for identification.

—Any distinguishing mark or sign to identify proprietorship, &c.

—*r. a.* To mark by slitting or cropping the ear; as, an *ear-marked* ewe.

Earn, (*ēr'n*), *v. a.* [A. S. *ærnan*, *gearnian*; Ger. *ernten*, to reap; *ernte*, crop.] To merit or deserve by labor, or by any performance. — To gain, acquire, obtain, or win by labor, service, or performance; to deserve and receive as compensation; as, to *earn* one's livelihood.

Earn, *v. n.* [A. S. *gerinnan*, to curdle.] To congeal or curdle, as milk. (Used in some parts of England.)

Earn, (*ēr'n*), *n.* A name sometimes given in Scotland to the eagle; as, *Earn's* cliff (the eagle's cliff).

Earne, or **Erne**, a river of Scotland, falling into the Tay near Abernethy. It rises in a loch of the same name, which has a circumference of 20 m., and is 24 m. from Perth.

Earnest, (*ēr'nest*), *a.* [A. S. *earnest*, or *geornest*; allied to *EARN*, *q. v.*; O. Ger. *ernust*, efficacious.] Ardent in the prosecution of any object or enterprise; eager to obtain; having a longing inclination; warmly engaged or incited; really intent upon anything; as, an *earnest* purpose. — Intent; fixed; serious; zealous; eager; as, an *earnest* politician.

—*n.* Seriousness; a real event, as opposed to jesting or figured appearance; eagerness; intentness.

"Hath giv'n in earnest, what I begg'd in jest." — Shaks.

—First-fruits; handseil; that which is paid in advance, to clinch a bargain or bespeak reward; a part paid or delivered beforehand, as a pledge and security for the whole; a pledge or assurance of something more to come. (Often called *earnest-money*.)

"Pay back the *earnest* penny received from Satan." — Decay of Piety.

(Law.) The sum paid by the buyer of goods in order to bind the seller to the terms of the agreement. To constitute *E.*, the thing must be given as a token of ratification of the contract, and it should be expressly stated so by the giver. After *E.* given, and what may be its amount, the vendor cannot sell the goods to another without a default in the vendee, and, therefore, if the latter does not come and pay, and take the goods, the vendor ought to go and request him, and then, if he does not come, pay for the goods, and take them away in convenient time, the agreement is dissolved, and he is at liberty to sell them to any other person.

Earnestly, *adv.* Warmly; zealously; importunately; with real desire; in an earnest manner; with eagerness; showing fixed attention; as, speak to him *earnestly*.

Earnest-money, *n.* See EARNEST.

Earnestness, *v.* Quality of being earnest; ardor in the pursuit of anything; animated desire; feverish zeal or warmth of inclination; eagerness; vehemence; fervor; importunity; anxious care; solicitude; fixed desire or attention; seriousness.

Earning, (*ēr'nīng*), *n.* (Generally used in the plural.) That which is earned by duty, labor, or service; that which is gained or merited by due performance; wages; reward; as, honest *earnings*.

"The wages of sin are the devil's *earnings*."

Ear-pick, *n.* An instrument used for probing and cleansing the ear.

Earps-borough, in *N. Carolina*, a P.O. of Johnson co.

Ear-ring, *n.* A jewel or ornament worn pendent at the ear which requires to be bored, in order that it may be attached.

From passages in Jeremiah, it appears that they were much worn by the Hebrew women in his time; and decorating the person with *E. R.* has always been a favorite custom among all Eastern nations. Among many nations they were worn both by men and women; but it has been an

especial female ornament in nearly all ages and in all countries. Homer speaks of Juno as being adorned with *E. R.*; and the statue of the Venus de Medici has the ears pierced for rings. Among the Greeks and Romans *E. R.* were much worn; and during the decline of the Roman empire the most costly and brilliant jewelry was worn in the ears of the Roman ladies. Pearls were the principal jewels employed; but diamonds, rubies, and sapphires of great value, were also worn. Among the Egyptians *E. R.* were much worn, and in modern times such ornaments were worn, at different periods, by men as well as women. At the present day, women alone wear *E. R.* — When the ears are bored, a slight inflammation generally occurs, which acts as a counter-irritant in the case of sore eyes. This is often adduced as a reason for putting rings in the ears. Young girls usually have their ears bored for *E. R.* when about seven years of age.

Earsh, (*ērsh*), *n.* See EDDIST.

Ear-shell, *n.* (Zool.) See HALIOTIDÆ.

Ear-shot, *n.* Any distance at which words may be heard; within hearing, or reach of the ear.

"Stand you out of *ear-shot*, — I have something to say to your wife in private." — Dryden.

Earth, (*ērth*), *n.* [A. S. *eorthe*, *eorth*; Ger. *erde*; O. Ger. *erda*; Icel. *jörd*; Dan. *jord*; Gr. *ērū*; Sansk. *uroi*.] The terraqueous globe which we inhabit; the world, as opposed to other scenes of existence, as the sun, moon, planets, &c.

"This dim spot which men call *Earth*." — Milton.

—The particles which compose the mass of the globe, but more particularly, the particles which form the fine mould on the surface of the globe; any indefinite mass or portion of that matter; the ground; soil; as, poor *earth*.

"Give him a little *earth* for charity!" — Shaks.

—The elementary bodies which form the globe, distinct from fire, air, or water; dry land; terrene matter.

"Water, *earth*, and air attest his bounty." — Thomson.

—A distinct part of the globe; a country; a region; a land; a territory.

"In ten set battles have we driven back

These heathen Saxons, and regained our *earth*." — Dryden.

—A hole in the ground in which an animal burrows; as, a fox's *earth*.

—The inhabitants of the globe. See GLOBE.

"*Earth*, with her thousand voices, praises God." — Coleridge.

(Astron.) The planet on which we live. It is the third planet from the sun, its orbit lying beyond those of Mercury and Venus. The mean distance of the earth from the sun is 92,800,000 of miles. Its form is spherical or globular. The simple proof of this fact is, that the extent of land or water over which we can look is much greater when we are on the top of a mountain, or lofty tower, at the mast-head of a vessel, than when we are on the ordinary level of the ground. The masts of vessels are seen while the hulls are hidden by the convexity of the earth; and on approaching land, the tops of towers and spires of churches are seen before buildings of less altitude rise into sight. As we go north, the altitude of the pole-star increases, and as we approach the south pole, stars, formerly invisible to us, come gradually into view. The shadow of the earth upon the moon during an eclipse is always round; and, lastly, the earth has been many times circumnavigated. The earth,

Fig. 899. — BAILEY'S APPARATUS.

however, is not properly a sphere, but an oblate spheroid having an equatorial diameter of 7925.6 miles, and a polar diameter of 7899.14 miles. That the distance from the *E.*'s centre to the poles is less than it is from the same point to the equator, is proven by the fact that a degree of a meridian increases from the equator to the poles; also a pendulum of a given length is found to move faster when carried toward the poles, and slower when carried toward the equator, showing that the force of gravity increases as we approach the poles, and that the distance from the *E.*'s centre must consequently be less. The mean density, or specific gravity, of the *E.* is 5.67 times that of water; that is to say, if we could compare the weight of the *E.* and that of a sphere of water of exactly the same size, the weight of the *E.* would be 5.67 times as much as that of the water. This result is attained by what is known as Cavendish's experiment. This experiment, as performed by Mr. Francis Bailey, may be described by the aid of Fig. 899. Two small balls, A, B, carried on a rod, A C B, are suspended by a single wire, D E, or by two

Fig. 898. — A JEWISH LADY.

wires at a small distance from each other, and their positions carefully observed by means of a telescope. Large balls of lead, F G, which move upon a turning frame, are brought near to them. Observations are then made to see how much these smaller balls are attracted out of their places by the large ones. By another movement of the turning frame, the larger balls can be brought to the position H K. The small balls are always put into a state of vibration by the attraction of the larger ones; then by observing the extreme distances to which they swing both ways, and taking the middle place between those extreme distances, we find the place at which the attraction of the large balls would hold them steady. Then, knowing the size of the large balls and their distances from the small balls in the experiment, and knowing also the size of the *E.*, and the distance of the small balls from the centre of the *E.*, we can calculate what would be the proportion of the attraction of the large balls on the small balls to the attraction of the *E.* on the small balls (that is, the weight of the small balls), if the leaden balls had the same density as the mean density of the *E.* It was found that this would produce a smaller attraction than that computed from the observations. Consequently, the mean density of the *E.* is less than the density of lead in the same proportion; and thus the mean density of the *E.* is found to be as above stated—5.67. The *E.* moves in its orbit from W. to E.; it performs its annual revolution in about 365 $\frac{1}{4}$ days, and its revolution on its own axis in 23 hours, 56 minutes, and 4 seconds. The orbit of the *E.* is an ellipse of small eccentricity, having the sun in one of its foci. The earth's axis has an inclination to the plane of its orbit of 23 $\frac{1}{2}$ °; from this arise the phenomena of the seasons, and the variations in the length of day and night. The temperature of the surface of the *E.* varies at different times from different causes. (See CLIMATE, METEOROLOGY, &c.) The interior of the *E.* is, for the following reasons, generally supposed to possess a high temperature:—1. The form of the earth, nearly spherical, and flattened at the poles of rotation, together with the regular disposition of the materials about the centre in elliptical layers, proves that it must have originally existed in a fluid, if not an æriiform state; so that the constituent molecules must have had free liberty to obey the forces arising from their mutual attraction and from the rotation of the whole mass, and arranged themselves in the position of equilibrium. (See CENTRAL FORCES.) But there is no other agent than heat to which we can attribute the fusion of such substances as compose the greater part of the exterior crust of the *E.* 2. The fact (which now appears to be fully established) that a sensible increase of temperature takes place as we descend from the surface (in deep mines, for example), after passing the depth at which the influence of the solar heat ceases to be felt, furnishes a direct proof of a very high temperature in the interior of the earth. Much uncertainty exists as to the rate at which this increase takes place; but the mean result of a number of experiments made in Europe and in this country, gives an increase of 1° Fahr. for every 15 yards of vertical descent, after passing the stratum of constant temperature. Admitting this rate of increase, and supposing it to be continued to the center, the intensity of heat at the center will be expressed by 3,500° of Wedgewood's pyrometer. The temperature of 100° Wedgewood, which is sufficient to fuse the lavas and the greater part of the known rocks, would be found at the depth of 125 miles. There are indications, however, that the rate of increase of temperature becomes less at great depths, while the tendency of the rock materials to melt or vaporize under such conditions may be prevented by the great pressure to which they are subjected, since this acts to raise the melting point. It was formerly believed that the earth was a molten mass interiorly, with a solid crust perhaps not more than 60 miles in thickness, but it is now believed to be solid to the center. This is deduced from astronomical and other observations. In whatever manner the *E.* may have taken its existing form, there are abundant proofs that its surface has been the theatre of many great revolutions. The masses of sand and gravel, and beds of limestone composed of shells and corals, which are found in the interior of continents, and even to the summits of the highest mountains, plainly show that the present land was once immersed deep under the waters of the ocean. The remains of animals and plants belonging to tropical countries, found in the highest latitudes, indicate an entirely different disposition of climates from those which now exist. The appearances of the mineral strata, twisted, and dislocated, and broken asunder, also afford undeniable evidence that the changes which have taken place on the surface of the *E.* have not all been brought about by the silent action of the causes which we see in daily operation, but by the operation of some sudden and violent force.

(Chem.) An *E.* proper is a compound body, consisting of a metal in combination with oxygen. They are Alumina, Glucina, Zirconia, Thoria, Didymia, Lantana, Ceria, Ytria, Terbia, and Erbina. They are insoluble in water, but dissolve in acids, and are precipitated from their solutions by ammonia, potash, or soda. They are the oxides of metals that do not decompose water.

(Agric.) Earths are distinguished from soils by their being without organized matter in their composition. Though scarcely any such earths are found on or near the ground's surface, yet the distinction is of use in speaking of soils. Thus, we say, a soil the basis of which is *E.*, sandstone, or chalk, &c.

Earth, *v. a.* To hide in earth; to bury; to cause to burrow in the earth; as, "The fox is earthed." (Dryden.)—

To cover with mould or earth;—occasionally preceding *up*.

"Why this ado in earthing up a carcass?"—Blair.

—*v. n.* To burrow; to retire under ground.

"Here foxes earth'd, and wolves abhorr'd the day."—Tickell.

Earth'-apple, *n.* A name sometimes given to various edible gonrds, roots, &c., as a cucumber or potato.

Earth'-bag, *n.* (Mil.) Same as SAND-BAG, *q. v.*

Earth'-bank, *n.* A mound or hillock of earth.

Earth'-board, *n.* (Agric.) The mould-board of a plough.

Earth'-born, *a.* Born of the earth; springing in a pristine condition from the earth; terrigenous; earthly; terrestrial; as, "the earth-born race." (Prior.)—Produced by earthly things; as, "earth-born cares."

Earth'-bound, *a.* Fastened by the pressure of the earth; as, "an earth-bound root."—Shaks.

Earth'-bred, *a.* Low; mean; abject; sordid.

Earth'-closet, *n.* A closet resembling an ordinary water-closet, but in which earth is used in place of water for disinfecting the deposits.

Earthen, (érth'n.) *a.* Composed of earth; made of earth or clayey matter; as, earthen ware.

Earth'-enware, *n.* Ware made of earth or clay by fictile process; crockery; pottery; china-ware.—See POTTERY, POTTER'S ART, PORCELAIN, &c.

Earth'-fed, *a.* Low; abject; sordid.

Earth'-flag, *n.* (Min.) A variety of Asbestos, so called from its long, fine, and flexible fibres, resembling flax.

Earth'-flax, *n.* (Min.) See ASBESTOS.

Earth'-fork, *n.* A pronged fork used in tillage.

Earth'-liness, *n.* State or quality of being earthly or gross.

—Worldliness; strong attachments to worldly things and earthly fleshpots.

Earth'-ling, *n.* A mortal; an inhabitant of the earth; a frail human creature.

Earth'-ly, *a.* Pertaining to the earth, or to this world; belonging to our present state; carnal; vile; sordid; mean; base; worldly; sensual;—opposed to heavenly or spiritually; as, earthly things.—Of anything on earth; conceivable;—used metaphorically; as, of what earthly use is it?

Earth'-ly-minded, *a.* With a mind inclined to earthly things; worldly-disposed.

Earth'-ly-mindedness, *n.* Worldliness; grossness; devotion to things of this earth.

Earth'-ness, *n.* Quality or state of being earthly, or of containing earth; grossness.

Earth'-nut, *n.* (Bot.) A name popularly given to various subterranean substances produced by plants, as the tuberous root of the umbelliferous plant *Bunium flexuosum*.

Earth'-pea, *n.* (Bot.) See LATHYRUS.

Earthquake, (érth'kwák.) *n.* A shaking, heaving, trembling, or convulsive action of the solid crust of the earth. From the impossibility of obtaining direct observations, all attempts at explaining the cause of earthquakes must be only theoretical. All theorists agree as to the connection between *E.* and volcanoes, and the cause of both of these phenomena is probably the same. Though the earth is now considered to be a solid mass, instead of a thin crust enclosing a molten sphere, as formerly entertained, this does not prevent the possibility of small deposits of liquid rock occurring here and there, though more probably fluidity may arise from some relief of pressure lowering the melting point and permitting the rocks to liquefy, perhaps with explosive force. There is much reason, however, to believe that *E.* and volcanic phenomena are largely due to the intrusion of water into greatly heated regions, its expansion into steam, with a consequent tremor of the earth's surface and subsequent opening of a volcanic vent. It is probable that some earthquakes are due to the sinking of sections of strata, forming what are known geologically as faults. The great Charleston earthquake (1886) has been ascribed to this cause.

The history and occurrence of *E.* in by-gone ages is of great interest to the geologist. They seem to have occurred at all times, and to have altered the surface of the globe in all parts, forming new lakes and river-courses, and sweeping away old ones; changing hills into valleys, and raising ridges of mountains out of level plains. No part of the earth is free from them. They are, however, most prevalent in the neighborhood of volcanoes, and their frequency and violence seem to be connected with the intensity and activity of the volcanoes near them. Nearly all volcanic phenomena are accompanied by trembling and shaking of the earth near them. On many occasions they precede volcanic eruptions, and cease as soon as the eruption takes place. It is singular, however, that many of the most severe *E.* take place in regions far remote from volcanoes; and districts in which there are the remains of extinct volcanoes are not more liable to *E.* than other places. Egypt has been more exempt, perhaps, than any other country; but an *E.* occurred there in A. D. 1740. They sometimes happen in the middle of the ocean; and cases have occurred where volcanic islands have been thrown up, and afterwards have disappeared. It has been calculated that not less than twelve or thirteen *E.*, destroying both life and property, happen every year. When they occur severely, there is, first, a trembling; then a severe shock or a succession of shocks; then a trembling again, which gradually dies away. The most violent shocks are instantaneous, and there are seldom more than three or four. When there is more than one violent shock, there are smaller shocks or tremblings between. Whole cities have been destroyed by an *E.*; and fertile districts, with all their fruits and produce, have been laid waste. It has been estimated that at least 13,000,000 of the human

race have been destroyed by these convulsions. When an *E.* occurs, observers state that the shock has at first a distinct vertical direction, coming from below upwards, but afterwards the direction of the motion becomes gradually more horizontal, till it ceases. This motion is evidently caused by an earth-wave, or undulation of the solid crust of the earth. These waves must move very rapidly, often not lasting at any point more than a second of time. When *E.* occur near the shore, the raising of the earth of course affects the sea, and immense tidal waves sweep over the land, often at a great distance from the shore, with irresistible fury. The *E.* of 1868 at the Sandwich Islands and along the W. coast of S. America, ranks among the most destructive on record. In Peru, from Calloa to Iquique, the whole coast was left in a complete state of ruin. Entire cities were destroyed. Immense tidal waves swept in upon the coast. It is est. that 30,000 lives were lost in S. America by this *E.* In October of the same year a violent shock was felt at San Francisco, Cal. May, 1877, an *E.* occurred on the coasts of Peru and Bolivia nearly as destructive as that of 1868. Iquique, Cobija, and several other towns, were almost destroyed, and several hundred lives lost. In 1883 an *E.* occurred in Java and Sumatra, destroying many towns and from 40,000 to 75,000 inhab.; in 1886 Charleston, S. C., was largely ruined by an *E.*, with a loss of over 40 lives and abt \$5,000,000 of property, and in 1877 serious *E.*s occurred in S. France and Italy. *E.*s operate to raise the land thus opposing the destructive tendency of the aqueous agencies, which incessantly labor to wear away the continents.

Earth'-shaking, *n.* Having power to shake the earth; agitating the earth.

Earth'-table, *n.* (Arch.) The lowest course of stone that is seen in a building, level with the earth.

Earth'-ward, *adv.* Toward the earth; correlative to heavenward or skyward.

Earth'-worm, *n.* (Zool.) See LUMBRICIDÆ.

Earth'-work, *n.* (Mil.) An intrenchment hastily thrown up, consisting chiefly of a rampart and ditch and serving as a temporary line of defence.

—A mean, sordid wretch; a niggard; a close-fisted hunk.

Earth'y, *a.* Consisting of, containing, or resembling earth; terrene; as, earthy substances.

"Survey his dead and earthy image."—Shaks.

—Inhabiting the earth, relating to earth; terrestrial.

"Those earthy spirits black and envious are."—Dryden.

—Gross; crude; cross; not refined; as, "earthy gross conceit."—Shaks.

(Min.) Without lustre, or dull and rough to the touch; as, an earthy fracture.

Ear'-trumpet, *n.* An anricle; an instrument applied to the ear in cases of partial deafness arising from injury to the membrane of the drum of the ear, want of proper susceptibility in the auditory nerve, and other causes. It is made of metal,—silver or gong-metal being considered the best,—and it is curved in form, one end being small enough to enter the ear, and the other bell-shaped, and expanding outwards like the mouth of a trumpet; whence it derives its name. It is curved, in order to collect the rays of sound, and oblige them to converge by reflection on the membrane of the drum of the ear, like rays of light collected in a focus by means of a lens. The collection of the rays of sound causes them to act on the drum of the ear with greater power. There are many different kinds of *E. T.* differing from each other in construction, but being all made on the same principle—to collect and concentrate the rays of sound. Some are very small,—such as the anricle and ear-cornet,—and can be worn in the ear attached to the head by elastic springs; others are made of india-rubber, in the form of long tubes, with bell-shaped opening at one end like the metal instruments. There are also artificial *membrana tympani*, membranes of the drum of the ear, made of vulcanized india-rubber, which are introduced into the orifice, the end of a piece of silver wire, and are found extremely useful in cases where deafness arises from perforation of the natural membrane.

Ear'-wax, *n.* See CERUMEN.

Ear'-wig, *n.* [A. S. *ear-wigga*—*ear*, and *wiega*, *wigg* a kind of fly.] (Zool.) See FORFICULARIÆ.

—One who gains the ear of another stealthily and by insidious arts; a tale-bearer; a whisperer; a sneak; an informer; a prying, mischief-making, contemptible person.

—*v. a.* To gain a hearing by artful means, in order to carry tales, whisper insinuations, or curry favor.

Ear'-witness, *n.* One who can attest to any matter from his own hearing; as, all present were made *ear-witnesses*.

Ear'-wort, *n.* (Bot.) See HEDYOTIS.

Ease, (ēz), *n.* [Fr. *aise*, from Armor. *ēaz*, facility; probably allied to It. *agio*, ease, Lat. *otium*; root in A. *easy*, easy.] State of quiet, rest, peace, tranquillity, repose; freedom from pain, excitement, disturbance, trouble, annoyance, toil, want, and the like.

"A youth of labour with an age of ease."—Goldsmith.

—Rest from labor or disquiet; freedom from difficult toil, or exertion; as, bodily ease.

"Stodious of ease, and fond of humble things."—Philips.

—Freedom from mental pain, concern, anxiety, solicitude or anything that frets or ruffles the mind; tranquillity, competency in worldly circumstances; as, my mind at ease.

"An ease of heart her very look convey'd."—Crabbe.

—Freedom from formality, stiffness, constraint, hardness of expressions, or unnatural arrangement; unaffectedness; as, ease of style, ease of manner, or position.

At ease, in a state of ease or leisure, free from embarrassment, pain, anxiety, or difficulty; as, to place a stranger at his *ease*.

At ease. To give ease or rest to; to free from pain, or any disquiet or annoyance, as the body; to relieve; to quiet; to allay; to free from anxiety, care, trouble, difficulty, or disturbance, as the mind; to tranquillize; to calm; to assuage; as, to *ease* the mind;—sometimes preceding *of*.

"I will *ease* me of mine adversaries." — *Isaiah* i. 24.

To abate or remove in part any burden, care, anxiety, or disturbance; to mitigate; to alleviate; to appease.

"As if with sports my sufferings I could *ease*." — *Dryden*.

To slacken, or remove from pressure, or any restraining influence or power: to shift a little; to detach in part; as, to *ease* a rope, to *ease* machinery.

To *ease off*; to *ease away*. (*Naut.*) To slacken or render a rope less taut, by degrees; as, to *ease off* a hawser. To *ease a ship*, to regulate the working of a ship's helm and sails, in order to prevent her pitching; also, to throw overboard anything which tends to the heavy laboring of a vessel.

ase'ful, *a.* Fitting to cause ease, tranquillity, or rest; peaceful; quiet.

ase'fully, *a.* With tranquillity, ease, or rest.

ase'fulness, *n.* State of being easeful or peaceful.

asel, (*ez'l*) *n.* [Ger.

asel, an ass.] (*Paint-*

ing.) A frame on

which a painter sup-

ports his canvas on

which he is working.

In a slightly slanting

position. It consists

of three long legs con-

connected by hinges at

the top, which extend

and form a tripod.

Holes are bored in the

faces of the two legs

against which the

painter rests, in which

pegs are inserted,

which support the

picture, and afford the

means of raising or

lowering it to the

height and position

that may be desired.

E. pictures, among

painters, are the

smaller pieces which

are painted on the

E. as distinguished from those which are drawn upon

walls, ceilings, &c.

ase'l-piece, *n.* An easel-picture. See **EASEL**.

ase'less, *a.* Without ease; wanting ease.

ase'ment, (*ez'ment*) *n.* That which gives or permits

ease, relief, support, or assistance; privilege; conven-

ience; accommodation.

"He has the advantage of a free lodging, and some other *ease-*

ments." — *Swift*.

(*Law*.) A privilege which the owner of one adjacent

tenement hath of another, existing in respect of their

several tenements, by which that owner against whose

tenement the privilege exists is obliged to suffer or not

to do something on or in regard to his own land for the

advantage of him in whose land the privilege exists.

The tenement to which the privilege is attached is

termed *dominant*, and that upon which it is imposed

servient. *E.* are as various as the exigencies of domestic

convenience or the purposes to which buildings and land

may be applied; as the right of pasture on other land,

of fishing in other waters, of carrying on an offensive

trade. All *E.* must originate in a grant or agreement,

express or implied, of the owner of the servient tenement.

The evidence of their existence, by the common

law, may be by proof of the agreement itself, or by pre-

scription, requiring actual and uninterrupted enjoyment

memorially, or for upwards of 20 years. *E.* are ex-

tinguished by release, by merge, by necessity, or by a

license to the servient owner to do some act inconsistent

with its existence; or by cessation of enjoyment, when

acquired by prescription.

asily, *adv.* In an easy manner; with ease; without

great effort, exertion, or labor; as, the thing is *easily*

done. — Tranquilly; without pain, anxiety, trouble, or

disturbance; as, to go through life *easily*. — Readily;

promptly; without reluctance. — Smoothly; regularly;

quietly; without jarring, discord, or irregular motion;

as, the machinery works *easily*.

"Not soon provok'd, she *easily* forgives." — *Prior*.

usiness, *n.* State of being easy; freedom from diffi-

culty; susceptible of bestowing or causing ease; flexi-

bility; facility. — Freedom or exemption from difficulty;

tranquillity. — Flexibility; facility; a yielding or dispo-

sition to yield without opposition or reluctance; as, *easi-*

ness of disposition. — Freedom from stiffness, constraint,

effort, or formality. — Act of moving with ease, or ap-

parent ease.

est, (*est*) *n.* [A.S.; Fris. *aest*; D. *oost*; Ger. *ost*; Gr. *ēōs*;

Fr. *est*.] That part of the heavens where the morning-

light appears, or where the sun is seen to rise at the

time of the equinoxes, or the corresponding point on

the earth; one of the four cardinal points. — The east-

ern parts of the earth, as regards Europe; Oriental coun-

tries generally; the Orient.

"The gorgeous *East* . . . pours on her kings barbaric pearl and

gold." — *Milton*.

East by North, or by South, that point of the compass

which lies $11\frac{1}{4}^{\circ}$ to the N. or S., respectively, of the point due E.—*East-north-east*, *east-south-east* (E.N.E.; E.S.E.), that point of the compass which lies $22\frac{1}{2}^{\circ}$ to N. or S. of east, or midway between N.E. or S.E. respectively. See **COMPASS**.

a. Toward the rising sun; or toward the point where the sun rises when in the equinoctial; as, the *east* wind.

r. n. To move or veer toward the east.

East, in *Ohio*, a township of Carroll co.; pop. abt. 1,350.

East Abington, in *Massachusetts*, a post-village of Abington township, Plymouth co., about 18 m. S.S.E. of Boston.

East Acworth, in *New Hampshire*, a post-office of Sullivan co.

East Albany, in *Vermont*, a post-office of Orleans co.

East Albany, in *Vermont*, a P.O. of Grand Isle co.

East Allen, in *Pennsylvania*, a township of Northampton co.

East Allentown, in *Pennsylvania*, a village of Lehigh co., on the Lehigh River, near Allentown.

East Alton, in *New Hampshire*, a village of Belknap co., abt. 30 m. N.E. of Concord.

East Amhurst, in *New York*, a post-office of Erie co.

East Amu chiy, in *Georgia*, a dist. of Walker co.

East Amwell, in *N. J.*, a twp. of Hunterdon co.

East Andover, in *New Hampshire*, a post-village of Merrimack co., abt. 25 m. N.N.W. of Concord.

East Anglia. See **WESSEX**.

East Arlington, in *Vermont*, a post-village of Arlington township, Bennington co., abt. 95 m. S.S.W. of Montpelier.

East Ashfield, in *Massachusetts*, a village of Franklin co., abt. 40 m. N.W. of Springfield.

East Ashford, in *New York*, a P.O. of Cattaraugus co.

East Auburn, or BENT'S MILLS, in *Maine*, a post-village of Androscoggin co., on the Androscoggin River, abt. 35 m. S.W. of Augusta.

East Aurora, in *New York*, a post-village of Aurora township, Erie co., on Cazanovia Creek, abt. 15 m. S.E. of Buffalo.

East Avon, in *New York*, a post-village of Avon township, Livingston co., abt. 220 m. W. by N. of Albany.

East Baldwin, in *Maine*, a post-village of Cumberland co., abt. 45 m. S.W. of Augusta.

East Barnard, in *Vermont*, a post-village of Windsor co., abt. 40 m. S. of Montpelier.

East Baton Rouge, in *Louisiana*, a S.E. central parish. Area, abt. 450 sq. m. Rivers, Mississippi and Amite rivers. Surface, level, or gently undulating; soil, fertile. Cap. Baton Rouge. Pop. (1890) 25,922.

East Beekmantown, in *New York*, a post-office of Clinton co.

East Bend, in *Illinois*, a twp. of Champaign co.

East Bend, in *North Carolina*, a P. O. of Yadkin co.

East Benton, in *Maine*, a post-office of Kennebec co.

East Benton, in *Penn.*, a P. O. of Lackawanna co.

East Berkshire, in *N. Y.*, a former P. O. of Tioga co.

East Berkshire, in *Vermont*, a post-village of Franklin co., abt. 50 m. N. by W. of Montpelier.

East Berlin, in *Connecticut*, a P. O. of Hartford co.

East Berlin, in *Michigan*, a village of St. Clair co., abt. 90 m. E. of Lansing.

East Berlin, in *Pennsylvania*, a post-borough of Adams co., on the Conewago creek, about 24 m. S. by W. of Harrisburg.

East Berne, in *New York*, a post-village of Albany co., abt. 19 m. W. of Albany.

East Beth'any, in *New York*, a post-village of Genesee co.

East Beth'el, in *Maine*, a village of Oxford co., abt. 50 m. W. of Augusta.

East Bethel, in *Vermont*, a post-village of Bethel township, Windsor co., abt. 38 m. S. of Montpelier.

East Beth'lehem, in *Pennsylvania*, a post-township of Washington co., on the Monongahela River, about 33 m. S. of Pittsburgh.

East Bir'mingham, in *Pennsylvania*, a borough of Alleghany co., on the Monongahela River, opposite Pittsburgh.

East Bloomfield, in *New York*, a post-village and township of Ontario county, abt. 8 m. W. of Canandaigua.

East Boston, in *Massachusetts*. See **BOSTON**.

East Boston, in *New York*, a P. O. of Madison co.

East Bowdoinham, in *Maine*, a post-office of Sagadahoc co.

East Bradford, in *Maine*, a post-village of Penobscot co., abt. 24 miles N. by W. of Bangor.

East Bradford, in *Massachusetts*, a manuf. village of Bradford township, Essex co., on the Merrimac River, abt. 28 m. N. of Boston.

East Brad'ford, in *Pennsylvania*, a township of Chester co.

East Branch, in *New York*, a post-office of Delaware co.

East Brand'ywine, in *Pennsylvania*, a township of Chester co.

East Brewster, in *Massachusetts*, a post-village of Barnstable co., abt. 50 m. S.E. of Boston.

East Bridge'water, in *Massachusetts*, a post-village and township of Plymouth co., abt. 20 m. S. by E. of Boston. Manf. Boots, shoes, carriages, castings, edged tools, &c.

East Bridgewater, in *Pennsylvania*, a former post-office of Susquehanna co.

East Brim'field, in *Massachusetts*, a post-office of Hampden co.

East Brook, in *Maine*, a township of Hancock co., abt. 30 m. E. by S. of Bangor.

East Brook, in *Pennsylvania*, a post-office of Lawrence co.

East Brook'field, in *Massachusetts*, a post-village of Worcester co., abt. 60 m. W. by S. of Boston.

East Brook'field, in *Vermont*, a post-village of Orange co., abt. 15 m. S. of Montpelier.

East Brook'lyn, in *Connecticut*, a village of Windham co., abt. 45 m. E. by N. of Hartford.

East Bruns'wick, in *New Jersey*, a township of Middlesex co.

East Bruns'wick, in *Pennsylvania*, a township of Schuylkill co.

East Bueks'fort, in *Maine*, a P. O. of Hancock co.

East Buf'falo, in *Pennsylvania*, a village and town-

ship of Union co., on the West Branch of the Susque-

hanna, just below Lewisburg.

East Burke, in *Vermont*, a post-village of Caledonia co., abt. 50 m. N.E. of Montpelier.

East Bur'lington, in *Illinois*, a post-office of Kane co.

East Burn'ham, in *Maine*, a village of Waldo co., abt. 40 m. N.E. of Augusta.

East Ca'bot, in *Vermont*, a post-office of Washington co.

East Calais, in *Vermont*, a post-village of Washington co., abt. 15 m. N.E. of Montpelier.

East Calu, in *Pennsylvania*, a township of Chester co.

East Cam'bridge, in *Ills.*, a former P. O. of Henry co.

East Cambridge, in *Massachusetts*, a post-office of Middlesex co. See **CAMBRIDGE**.

East Cam'bridge, in *Vermont*, a P. O. of Lamoille co.

East Ca'naan, in *Connecticut*, a post-village of Litch-

field co., abt. 40 m. N.N.W. of Hartford.

East Ca'naan, in *New Hampshire*, a village of Grafton co., 52 m. N. of Concord.

East Canada Creek, in *New York*, rises in Hamilton co., and flows S. between Fulton and Herkimer cos. into the Mohawk river.

East Can'dor, in *New York*, a village of Tioga co.

East Can'ton, in *Pennsylvania*, a P. O. of Braddock co.

East Centre, in *Missouri*, a township of Green co.

East Cen'tre, in *Pennsylvania*, a township of Chester co.

East Chain Lakes, in *Minnesota*, a P. O. of Martin co.

East Charle'mont, in *Massachusetts*, a post-village of Franklin co., on the Deerfield River, abt. 45 m. W.N.W. of Springfield.

East Charles'ton, in *Pennsylvania*, a post-office of Tioga co.

East Charles'ton, in *Vermont*, a post-village of Orleans co., abt. 60 m. N.N.E. of Montpelier.

East Chat'ham, in *New York*, a post-village of Columbia co., abt. 28 m. S.E. of Albany.

East Ches'ter, in *New Hampshire*, a post-village of Rockingham co., abt. 25 m. S.E. of Concord.

East Chester, in *New York*, a post-village and township of Westchester co., abt. 16 m. N.E. of New York city.

East Chickamin'ga, in *Georgia*, a district of Walker co.

East China, in *New York*, a village of Wyoming co., abt. 270 m. W. of Albany.

East Clar'ence, in *New York*, a P. O. of Erie co.

East Clar'ence, in *Vermont*, a post-village of Rutland co., abt. 60 m. S.S.W. of Montpelier.

East Clar'idon, in *Ohio*, a post-village of Geauga co., abt. 175 m. N.E. of Columbus.

East Clarks'field, in *Q.*, a former P. O. of Huron co.

East Clark'son, in *N. Y.*, a former P. O. of Monroe co.

East Cleveland, in *Ohio*, a post-village of Cuyahoga co., abt. 4 m. E. of Cleveland.

East Cob'leskill, in *New York*, a post-village of Schoharie co., abt. 38 m. W. of Albany.

East Cocal'ico, in *Pennsylvania*, a township of Lancaster co.

East Con'cord, in *New Hampshire*, a post-village of Concord township, Merrimack co., on the Merrimac River, abt. 2 m. from Concord.

East Con'cord, in *New York*, a post-office of Erie co.

East Conequeness'ing, in *Pennsylvania*, a township of Butler co.

East Con'stable, in *New York*, a P. O. of Franklin co.

East Cor'inth, in *Maine*, a post-vill. of Penobscot co.

East Cor'inth, in *Vermont*, a post-village of Orange co., abt. 25 m. S.E. of Montpelier.

East Corn'wall, in *Connecticut*, a P.O. of Litchfield co.

East Cov'entry, in *Pennsylvania*, a township of Chester co.

East Cov'entry, in *Vermont*, a P. O. of Orleans co.

East Crafts'burg, in *Vermont*, a post-village of

East Do'ver, in *Vermont*, a post-office of Windham co.
East Dur'ham, in *New York*, a post-village of Greene co., about 40 m. S. by W. of Albany.

East Earl, in *Pennsylvania*, a post-township, of Lancaster co.

East E'den, in *Maine*, a former P. O. of Hancock co.

East Eden, in *New York*, a post-office of Erie co.

East Ed ington, in *Maine*, a post-village of Penobscot co., abt. 75 m. N.E. of Augusta.

East El'ba, in *New York*, a post-office of Genesee co.

East El'iott, in *Maine*, a village of York co., abt. 45 m. W.S.W. of Portland.

East El'more, in *Vermont*, a post-office of Lamoille co.

East'er, in *Massachusetts*, a village of Pittsfield township, Berkshire co., abt. 115 m. W. by S. of Boston.

Easter Island, or TEAPY ISLAND, a small island in the Pacific Ocean, abt. 2,300 m. W. of Chili; Lat. 20° 6' S., Lon. 109° 7' W. It is of volcanic origin, and rises to the height of 1,200 feet.

East'er, East'er-day, *n.* [This term has been variously derived—some taking it from the Saxon *oster*, "to rise," and others from the name of a heathen goddess, *Eostre* or *Ostara*, whose rites the Saxons were accustomed to celebrate at this time of the year, and on account of which the month of April was styled *Eostermōnath* in their calendar.] A Christian festival, held in commemoration of the resurrection of our Saviour—called *Pascha* by the Roman and Greek churches. It is a movable feast, occurring at any date between March 21 and April 25; and by it the other movable feasts throughout the ecclesiastical year are regulated. It is held about the same time as the Jewish Passover, or Paschal feast, although it very seldom happens that the Christian and Jewish festivals are observed on the same day. In the early Church this festival lasted for some days, and catechumens were then usually admitted to the rite of baptism. At present, its celebration is confined, in the Church of England, to Easter-eve, Easter Sunday, and the Monday and Tuesday in Easter week. In the Roman Catholic Church it is a time of enjoyment, because the restrictions imposed during the preceding period of Lent are no longer to be observed. Some ascribe its institution to the apostles, but the more general opinion is, that it was first observed by their immediate successors, about 65. The Council of Arles, in 314, and the Council of Nicea, in 325, decreed that the day for keeping this festival should be the 14th day of the March moon. By the alteration of the calendar by Gregory XIII., in 1582, the first Sunday after the full moon immediately following the 21st of March, was fixed as the day for observing this festival.

Easter egg, *n.* An egg used as a gift at Easter. See SECTION II.

East'er-giant, *n.* (*Bot.*) See POLYGONUM.

East'er-gift, *n.* A present or gift bestowed at Easter.

East'erling, *n.* A native of some country eastward of another; specifically applied by the English to persons belonging to countries on the Baltic. — A piece of money coined in the East by Richard II. of England.

—A species of water-fowl.

—*a.* See STERLING.

East'erly, *a.* Coming from the eastward; as, an *east'erly* wind. — Toward the east; situated in or near the east; on the east part; in an easterly direction; as, the *easterly* course of a ship.

—*adv.* On the east; in the direction of east.

East'ern, *a.* [A. S.] Oriental; being or dwelling in the east; situated toward the east; on the east part; as, an *Eastern* people. — In an eastward direction; as, to make an *eastern* voyage.

East'ern, in *Illinois*, a township of Greene county.

Eastern Archipelago. See ARCHIPELAGO (EASTERN).

Eastern Empire. See GREEK EMPIRE.

Eastern Point, or GLOUCESTER POINT, in *Massachusetts*, at the entrance of Cape Ann Harbor. It exhibits a fixed light, Lat. 42° 34' 40" N., Lon. 70° 39' W.

East Eu'clid, in *Ohio*, a village of Cuyahoga co., abt. 10 m. N.E. of Cleveland.

East Ev'ans, in *New York*, a hamlet of Erie co.

East Ex'eter, in *Maine*, a hamlet of Penobscot co.

East Fair'field, in *Ohio*, a post-village of Columbiana co., about 150 m. E. N. E. of Columbus.

East Fairfield, in *Vermont*, a post-village of Franklin co., about 45 m. N. N. W. of Montpelier.

East Fal'lowfield, in *Pennsylvania*, a township of Chester co.

—A township of Crawford co.

East Fal'mouth, in *Massachusetts*, a post-village of Barnstable co., about 60 m. S. E. of Boston.

East Farm'ington, in *Michigan*, a village of Oakland co., about 20 m. N. W. of Detroit.

East Felician'a, in *Louisiana*, a E. central parish. Area, about 480 sq. m. Rivers, Mississippi, Amite, and Comite rivers, and several creeks. Surface, undulating. Soil, fertile. It contains an insane asylum and a college. Cap. Jackson. Pop. (1890) 17,903.

East Find'ley, or FINLEY, in *Pennsylvania*, a post-township of Washington co., about 38 m. S. W. of Pittsburgh.

East Fishkill, in *New York*, a post-town of Dutchess co., about 75 m. S. of Albany.

East Flor'ence, in *New York*, a P. O. of Oneida co.

East Ford, in *Connecticut*, a post-town and township of Windham county, about 35 miles E. N. E. of Hartford.

East Fork, in *Illinois*, a post-village of Montgomery co., abt. 50 m. S. S. E. of Springfield.

East Fork, in *Kentucky*, a post-office of Metcalf co.

East Fork, in *Missouri*, a former P. O. of Barton co.

—A village of Macon co., about 110 m. N. by W. of Jefferson City.

East Fox'borough, in *Massachusetts*, a post-village of Norfolk co., about 25 m. S. by W. of Boston.

East Frank'lin, in *Vermont*, a post-village of Franklin co., about 60 m. N. N. W. of Montpelier.

East Free'dom, in *Pennsylvania*, a post-village of Blair co., on a branch of the Juniata river, about 130 m. W. of Harrisburg.

East Free'town, in *Massachusetts*, a post-office of Bristol co.

East Fryeburgh, in *Maine*, a post-office of Oxford co.

East Gaines, in *New York*, a post-office of Orleans co.

East Gainesville, in *New York*, a former post-office of Wyoming co.

East Gale'na, in *Illinois*, a township of Jo Daviess county.

East Gal'way, in *New York*, a P. O. of Saratoga co.

East Genesee, in *Michigan*, a township of Genesee co.

East Gen'oa, in *New York*, a post-village of Cayuga co., about 20 m. S. of Auburn.

East Geor'gia, in *Vermont*, a post-village of Franklin co., about 48 m. N. W. of Montpelier.

East Ger'man, in *New York*, a P. O. of Chenango co.

East Gib'son, in *Wisconsin*, a P. O. of Manitowoc co.

East Gil'ead, in *Michigan*, a P. O. of Branch co.

East Glas'tonbury, in *Connecticut*, a post-office of Hartford co., about 9 m. S. of Hartford.

East Glen'ville, in *New York*, a post-office of Schenectady co.

East Gloucester (*glos'ter*), in *Massachusetts*, a former post-office of Essex co.

East Go'shen, in *Pennsylvania*, a township of Chester county.

East Granby, in *Connecticut*, a post-village of Hartford co., about 20 m. N. N. W. of Hartford.

East Granger, in *New York*, a P. O. of Allegany co.

East Gran'ville, in *Massachusetts*, a village of Hampden co., about 100 m. E. S. E. of Boston.

East Granville, in *Vermont*, a P. O. of Addison co.

East Greene, in *New York*, a former P. O. of Chenango county.

East Greene, in *Pennsylvania*, a P. O. of Erie co.

East Green'bush, in *New York*, a post-town of Rensselaer county, on the Hudson river, opposite Albany.

East Greens'borough, in *Vermont*, a former P. O. of Orleans co.

East Green'ville, in *Ohio*, a post-village of Stark co., about 110 m. N. E. of Columbus.

East Green'wich, in *New York*, a post-office of Washington co.

East Green'wich, in *Rhode Island*, a post-town, cap. of Kent co., on the W. shore of Narragansett bay, about 14 m. S. by W. of the city of Providence.

East Green'wood, in *Ohio*, a P. O. of Muskingum county.

East Gris'wold, in *Connecticut*, a village of New London co., about 35 m. E. by S. of Hartford.

East Grove, in *Iowa*, a village of Henry co., about 66 m. S. of Iowa city.

East Grove, in *New York*, a former P. O. of Chemung county.

East Grove'land, in *New York*, a P. O. of Livingston county.

East Guil'ford, in *New York*, a post-village of Chenango co., about 100 m. W. of Albany.

East Guil'ford, in *Vermont*, a village of Windham co., about 115 m. S. S. E. of Montpelier.

East Had'dam, in *Connecticut*, a post-town of Middlesex co., on the Connecticut river, about 30 m. S. S. E. of Hartford.

East Had'dam Landing, in *Connecticut*, a village of Middlesex co., on the Connecticut river, about 35 m. S. by E. of Hartford.

East'ham, in *Massachusetts*, a post-town and township of Barnstable co., on the peninsula of Cape Cod, about 70 m. S. E. of Boston.

East Ham'burg, in *New York*, a post-town and township of Erie co., about 12 m. S. E. of the city of Buffalo.

East Ham'ilton, in *New York*, a post-village of Madison co.

East Hampden, in *Maine*, a P. O. of Penobscot co.

East Hamp'ton, in *Connecticut*, a post-village of Middlesex co., about 18 m. S. E. of Hartford.

Easthampton, in *Massachusetts*, a post-town and township of Hampshire co., on the Connecticut river, about 80 m. W. by S. of Boston.—About 2 m. E. S. E. of the village is Mount Tom, which rises abruptly to a height of 1,214 ft. Pop. of twp. (1897) about 4,450.

East Hamp'ton, in *New York*, a town and post-town of Suffolk co., on Long Island, about 110 m. E. by N. of the city of New York.

East Han'over, in *Pennsylvania*, a township of Dauphin co.

—A post-township of Lebanon co., about 20 m. N. E. of Harrisburg.

East Hard'wick, in *Vermont*, a post-village of Caledonia co., about 20 m. N. N. E. of Montpelier.

East Hart'ford, in *Connecticut*, a post-town and township of Hartford co., on the Connecticut river, opposite Hartford.

East Har'wich, in *Massachusetts*, a post-village of Barnstable co., about 65 m. S. E. of Boston.

East Haven, in *Connecticut*, a post-town and township of New Haven co., on Long Island Sound, about 4 m. E. of New Haven. The township contains Lake Saltonstall.

East Ha'ven, in *Vermont*, a post-township of Essex co., about 45 m. S. E. of Montpelier.

East Ha'verhill, in *Massachusetts*, a former P. O. of Essex co., about 33 m. N. of Boston.

East Ha'verhill, in *New Hampshire*, a post-village of Grafton co., about 15 m. N. N. W. of Concord.

East Haynes'ville, in *Maine*, a former P. O. of Aroostook county.

East He'bron, in *Maine*, a post-village of Oxford co., about 45 m. N. N. W. of Portland.

East He'bron, in *Pennsylvania*, a P. O. of Potter co.

East Hemp'field, in *Pennsylvania*, a township of Lancaster co.

East Her'rick, in *Pennsylvania*, a village of Bradford co., about 110 m. N. N. E. of Harrisburg.

East Hick'ory, in *Pennsylvania*, a P. O. of Forest co.

East High'gate, in *Vermont*, a post-village of Franklin co., about 53 m. N. N. W. of Montpelier.

East Hill, in *New York*, a village of Nunda township of Livingston co., about 225 m. W. of Albany.

East Holden, in *Maine*, a post-office of Penobscot co.

East Hol'iston, in *Massachusetts*, a post-village of Middlesex co., about 23 m. W. S. W. of Boston.

East Ho'mer, in *New York*, a P. O. of Cortland co.

East Homer, in *Pennsylvania*, a former P. O. of Potter co.

East Honn'ds'field, in *New York*, a post-office of Jefferson co.

East Hub'bardon, in *Vermont*, a P. O. of Rutland co.

East Huntingdon, in *Pennsylvania*, a township of Westmoreland co.

East India Company, a celebrated joint-stock association, originally established to carry on the trade between Great Britain and the East Indies, or rather with the countries to the eastward of the Cape of Good Hope. It was constituted by royal charter in 1600, a continued, notwithstanding repeated efforts to open trade, to enjoy the exclusive privileges conceded in 1688. At that period, the power of the crown to restrict the freedom of trade without the sanction of Parliament having been denied, a rival association obtained an Act of Parliament in its favor; but after a variety of negotiations, which it is unnecessary to specify, the two corporations were joined in 1702, under the name of *United Company of Merchants trading to the East Indies*, an appellation which has been continued to the present day. In 1708 the United Company was secured by Parliament in the exclusive privilege of trading to all places eastward of the Cape of Good Hope to the straits of Magellan; and this privilege, with some modification was confirmed and prolonged by successive Acts of Parliament down to 1814. By the Act 53 Geo. III. c. 11 passed 1813, the East India Company's charter was renewed for twenty years; but it then received some important modifications, by which a restricted intercom with the whole of the Company's Indian possessions was permitted to all British merchants; the monopoly the trade between England and China being, however retained in the hands of the East India Company. The concessions paved the way for the Act of 1833, by which though the Company's charter was continued till 1858 not only was the monopoly of the China trade abolished but an end wholly put to the Company's original character as a commercial association. But it is not a commercial association so much as a great territorial power that the East India Company became distinguished. The first establishments of the English in India, as other European nations, arose out of the alleged necessity of providing armed factories or strongholds, where the adventurers might warehouse their goods, and res in safety for the purpose of carrying on their intercourse with the natives; but the factories speedily degenerated into fortifications, and the garrisons into armies. For while, the power of the English and French was pre nearly balanced in India; but the talents and victory of Lord Clive gave to the British a decided superiority over every other competitor, foreign or native, and tended their sway over some of the largest and finest portions of the Mogul empire. The immense power wielded by the East India Company, lessening and overshadowing the prerogative of the Crown, obliged the latter to eventually rescind the Company's charter (in spite of a strenuous resistance) in 1858, and to transfer to the Imperial govt. the sole political control of the affairs of India. In that year, accordingly, by Act of Parliament, the entire power hitherto vested in the Company became transferred to the home govt., which since assumed the whole and undisputed rule of that country. The East India Company still exists, but little other purpose than to receive and pay the dividends of those individuals of the popular community who vested their money in its stock.

East'ing, *n.* (*Navig. and Surveying*.) The distance eastward from a given meridian.

East-in'sular, *a.* Relating or pertaining to the Eastern Islands.

East Jaffrey, in *New Hampshire*, a post-village of Cheshire co., abt. 36 m. S.W. of Concord.

East Ja'va, in *New York*, a P. O. of Wyoming co.

East Jew'ett, in *New York*, a P. O. of Greene co.

East Johnson, in *Vermont*, a P. O. of Lamoille co., the Eden Branch of Lamoille river.

East Ken'dall, in *New York*, a former P. O. of Lewis county.

East Kent, in *Connecticut*, a P. O. of Litchfield co.

East Killingly, in *Connecticut*, a post-village of Windham co., about 30 m. N. N. E. of Norwich.

East Kings'ton, in *New Hampshire*, a post-town of Rockingham co., about 40 m. S. E. of Concord.

East Knox, in *Maine*, a post-office of Waldo co.

East Koy Creek, in *New York*, joins the West Koy Creek, and flows into the Genesee River in Alleghany co.

East Lackawan'oc, in *Pennsylvania*, a township of Mercer co.

- Eastlake**, SIR CHARLES LOCK, R.A., an eminent English artist, born at Plymouth, 1795. He commenced his career as a portrait-painter, and after visiting Italy and Greece he began exhibiting in the Royal Academy in 1823. In 1828 his painting entitled *Peasants on a Pilgrimage to Rome*, attracted much praise. His greatest work, *Christ Weeping over Jerusalem*, next appeared, and placed him at the head of his profession. His *Christ Blessing Little Children*, and his *Hagar and Ishmael*, though both excellent, are not considered equal to the former. E. became successively secretary to the Royal Commission of Fine Arts, keeper of the National Gallery, president of the Royal Academy, and director of the National Gallery. Died 1865.
- East Lampeter**, in *Pennsylvania*, a township of Lancaster co.
- Eastland**, in *Texas*, a N.E. central co.; area, about 900 sq. m.; surface, diversified; soil, fertile; products, corn, rye, barley, sorghum, &c. Pop. (1890) 10,343. Cap. Eastland.
- East Lansing**, in *New York*, a post-office of Tompkins co.
- East Laport**, in *North Carolina*, a P. O. of Jackson co.
- East Lebanon**, in *New Hampshire*, a post-village of Grafton co., about 50 m. N.W. of Concord.
- East Lee**, in *Massachusetts*, a P. O. of Berkshire co.
- East Lemps'ter**, in *New Hampshire*, a post-office of Sullivan co.
- East Le'on**, in *New York*, a P. O. of Cattaraugus co.
- East Leroy'**, in *Michigan*, a post-office of Calhoun co.
- East Lew'istown**, in *Ohio*, a P. O. of Mahoning co.
- East Lexington**, in *Massachusetts*, a post-village of Middlesex co., about 11 m. N.W. of Boston.
- East Liberty**, in *Indiana*, a village of Allen co., about 22 m. E.S.E. of Fort Wayne.
- East Lib'erty**, in *Ohio*, a post-village of Logan co., about 126 m. N.N.E. of Cincinnati.
- East Lib'erty**, in *Pennsylvania*, a village of Collins twp., Allegheny co., now a part of Pittsburgh and comprising that fashionable residence portion known as "East End." It is a sub-station of the Pittsburgh post-office and is connected with the business section of the city by the Penna. R. R. and several trolley lines.
- East Li'ma**, in *Indiana*, a township of La Grange co.
- East Lim'ington**, in *Maine*, a post-village of York co., near the junction of the Little Ossipee and Saco rivers, about 65 m. S.W. of Augusta.
- East Lincoln** (*link'n*), in *Maine*, a post-office of Penobscot co.
- East Line**, in *New York*, a post-village of Saratoga co., about 20 m. N. by W. of Albany.
- East Litchfield**, in *Connecticut*, a post-office of Litchfield co.
- East Liver'more**, in *Maine*, a post-village and township of Androscoggin co., on the Androscoggin river, about 25 m. W. by N. of Augusta.
- East Liver'pool**, in *Ohio*, a city of Columbiana co., on the Ohio river, about 48 m. N.W. of Pittsburgh, Pa. It is noted for its important industry in pottery, having, next to Trenton, N. J., the most extensive works in America. Pop. (1897) about 15,300.
- East Long Mead'ow**, in *Massachusetts*, a post-village of Hampden co., about 5 m. S.S.E. of Springfield.
- East Low'ell** (*lo'el*), in *Maine*, a post-office of Penobscot co.
- East Ly'man**, in *New Hampshire*, a village of Grafton co., about 80 m. W. by N.W. of Concord.
- East Lyme**, in *Connecticut*, a post-village and township of New London co., about 43 m. E. of New Haven.
- East McDon'ough**, in *New York*, a post-office of Chenango co.
- East Machi'as**, in *Maine*, a post-township of Washington co., on Machias Bay, at the mouth of E. Machias river, about 130 m. E. by N. of Augusta.
- East Ma'eon**, in *Georgia*, a village of Bibb co., on the Ocmulgee river, opposite Macon.
- East Mad'ison**, in *Maine*, a post-village of Somerset co., about 40 m. N. of Augusta.
- East Mad'ison**, in *New Hampshire*, a post-office of Carroll co.
- East Mad'ison**, in *New Jersey*, a village of Morris co.
- East Maho'ning**, in *Pennsylvania*, a township of Indiana co.
- East-Main**, or SLADE RIVER, rises in Lake Nipigon, near the S.E. border of Labrador, and flows nearly W. into James Bay, in Lat. 52° 15' N., Lon. 78° 41' W. Length about 400 m.
- East Maine**, in *New York*, a post-office of Broome co.
- East'man**, in *Wisconsin*, a post-township of Crawford co., about 80 m. N.E. of Prairie du Chien.
- East'mansville**, in *Michigan*, a post-village of Ottawa co., on Grand river, abt. 18 m. W. by N. of Grand Rapids.
- East Mar'ion**, in *Michigan*, a village of Livingston co., about 40 m. E.S.E. of Lansing.
- East Mar'ion**, in *New York*, a post-office of Suffolk co.
- East Marl'borough**, in *Pennsylvania*, a township of Chester co.
- East Marshfield**, in *Massachusetts*, a village of Plymouth co., about 20 m. S.E. of Boston.
- East Ma'sonville**, in N. Y., a P. O. of Delaware co.
- East Manch' Chunk**, in *Pennsylvania*, a post-borough of Carbon co.
- East Mays'ville**, in *Maine*, a former post-office of Aroostook co.
- East Med'way**, in *Massachusetts*, a former post-office of Norfolk co., about 20 m. S.W. of Boston.
- East Mel'rose**, in *Iowa*, a former P. O. of Monroe co.

- East Or'rington**, in *Maine*, a post-village of Penobscot co., about 65 m. E.N.E. of Augusta.
- East Ot'isfield**, in *Maine*, a P. O. of Cumberland co.
- East Ot'to**, in *New York*, a post-town of Cattaraugus county.
- East Paint'ed Post**, in *New York*, a village of Steuben co., about 210 m. E. by S. of Albany.
- East Paler'mo**, in *Maine*, a post-office of Waldo co.
- East Paler'mo**, in *New York*, a P. O. of Oswego co.
- East Pal'estine**, in *Ohio*, a post-village of Columbiana co., about 16 m. E.N.E. of Columbus.
- East Palmy'ra**, in *New York*, a post-village of Wayne co., about 195 m. W. by N. of Albany.
- East Par'sonfield**, in *Maine*, a P. O. of York co.
- East Paw-Paw**, in *Illinois*, a P. O. of DeKalb co.
- East Pem'broke**, in *New York*, a post-village of Genesee co., about 6 m. from Batavia.
- East Penn'field**, in *New York*, a P. O. of Monroe co.
- East Penn.**, in *Pennsylvania*, a township of Carbon co., on the Lehigh river, about 90 m. E. by N. of Harrisburg.
- East Penns'borough**, in *Pennsylvania*, a village and township of Cumberland co., on the Susquehanna river opposite Harrisburg.
- East Pep'perell**, in *Massachusetts*, a post-village of Middlesex co., about 40 m. N.W. of Harrisburg.
- East Peru'**, in *Maine*, a post-office of Oxford co.
- East Pharsa'lia**, in *New York*, a post-village of Chenango co., about 100 m. W. by S. of Albany.
- East Pier'pont**, or COXE'S MILLS, in *New York*, a village of Pierpont twp., St. Lawrence co., on Rackett river, abt. 4 m. S. of Potsdam. *Manuf.* Starch, lumber, &c.
- East Pike**, in *New York*, a village of Wyoming co., about 250 m. W. of Albany.
- East Pike**, in *Pennsylvania*, a vill. of Washington co.
- East Pike'land**, in *Pennsylvania*, a township of Chester co.
- East Pike Run**, in *Pennsylvania*, a township of Washington co.
- East Piteairn**, in *New York*, a post-office of St. Lawrence co.
- East Pitts'field**, in *Maine*, a village of Somerset co., about 40 m. N.N.E. of Augusta.
- East Pitts'ton**, in *Maine*, a post-village of Kennebec co., about 15 m. S.S.E. of Augusta.
- East Plain'field**, in *New Hampshire*, a post-village of Sullivan co., about 45 m. N.W. of Concord.
- East Plymouth**, in *Ohio*, a post-village of Ashtabula co., about 212 m. N.E. of Columbus.
- East Po'estenkill**, in *New York*, a post-office of Reusselaer co.
- East Point**, in *Georgia*, a post-office of Fulton co.
- East Poland**, in *Maine*, a post-village of Androscoggin co., about 35 m. S.W. of Augusta.
- East'port**, in *Iowa*, a former post-office of Fremont co.
- East'port**, in *Maine*, a port of entry and post-town of Washington co., on the S.E. shore of Moose Island, about 234 m. N.E. of Portland. Lat. 44° 54' N., Lon. 66° 56' W. It has a considerable commerce, besides a most extensive lumber trade. The port is defended by Fort Sullivan. The township comprises Moose Island, and several other small islands in Passamaquoddy Bay, with an aggregate area of about 2,000 acres. Pop. of township (1897) about 4,900.
- East'port**, in *Mississippi*, a village of Tishomingo co., on the Tennessee river, about 270 m. N.N.E. of Jackson.
- East'port**, in *Ohio*, a village of Tuscarawas co., about 100 m. E.N.E. of Columbus.
- East Por'ter**, in *New York*, a post-office of Niagara co.
- East Poul'tney**, in *Vermont*, a post-village of Rutland co., about 65 m. S.W. of Montpelier.
- East Prai'rieville**, in *Minnesota*, a former post-office of Rice co.
- East Princeton**, in *Massachusetts*, a post-village of Worcester co., about 45 m. W. by N. of Boston.
- East Providence**, in *Pennsylvania*, a township of Bedford co.
- East Prov'idence**, in *Rhode Island*, a post-township of Providence co.
- East Put'nam**, in *Connecticut*, a post-village of Windham co.
- East Ra'u'dolph**, in *Massachusetts*, a post-village of Norfolk co., about 15 m. S. of Boston.
- East Randolph**, in *New York*, a post-village of Cattaraugus co., about S. by W. of Buffalo.
- East Randolph**, in *Vermont*, a post-village of Orange co., about 25 m. S. by E. of Montpelier.
- East Ray'mond**, in *Maine*, a P. O. of Cumberland co.
- East Read'field**, in *Maine*, a post-village of Kennebec co., about 8 m. N.N.W. of Augusta.
- East River**, in *New York*, a strait connecting N. Y. bay with Long Island sound, communicating with Hudson river by a narrow channel called Harlem river, which forms the N. boundary of Manhattan Island, and is about 20 m. in length. It is navigable for vessels of the largest size, and has a pass called Hell Gate, 7 m. from Castle Garden, the navigation of which was very dangerous. The U. S. government, in 1870, decided to free the channel of its obstructions. Engineers, under the direction of General Newton, were engaged for six years drilling the principal rocks and charging them with nitro-glycerine, and in the summer of 1876, that portion known as Hallett's Reef was blown up. On Oct. 10, 1885, after years of preparation, the large central portion known as the Middle Reef, or Flood Rock, was shattered by a second blast, with the result that the entire channel is now sufficiently clear to be safely navigated at all times. See HELL GATE.
- East Roume'lia**, or **Eastern Rummelia**, a province of Turkey, formed S. of the Balkans, under the Berlin treaty (q. v.), and under the direct political authority of the Sultan, having administrative autonomy and a Christian governor appointed by the Porte, with the assent of the European powers; full religious liberty to be enjoyed. Area, about 13,800 sq. m. Pop. (1895), 835,413. See BULGARIA.
- East Rox'bury**, in *Vermont*, a P. O. of Washington co.
- East Rumford**, in *Maine*, a post-office of Oxford co.
- East Ru'pert**, in *Vermont*, a p.v. of Bennington co.
- East Rush**, in *Pennsylvania*, a P. O. of Susquehanna co.
- East Rush Creek**, in *Ohio*, a P. O. of Perry co.
- East Rushford**, in *New York*, a post-village of Allegany co.
- East Saginaw**, in *Michigan*, formerly a separate and distinct city of Saginaw co., but, in March, 1890, incorporated with the city of Saginaw by an act of the legislature of 1889. See SAGINAW.
- East Sa'tem**, in *New York*, a post-village of Washington co., about 50 m. N.N.E. of Albany.

East Salem, in *Pennsylvania*, a P. O. of Juniata co.
East St. Louis, in *Illinois*, a city on the Mississippi river, opposite St. Louis, Mo., and connected with it by a great steel bridge. It has extensive breweries, machine works and mills. The National Stock Yards, 1 m. out, are the second largest in the U. S. Pop. (1890) 15,169.
East Salisbury, in *Massachusetts*, a village of Essex co., abt. 36 m. N.E. of Boston.
East Sanborn, in *New Hampshire*, a village of Belknap co., abt. 30 m. N. of Concord.
East Sandwich, in *Massachusetts*, a post-village of Barnstable co., abt. 60 m. S.E. of Boston.
East Sanddy, in *Pennsylvania*, a P. O. of Venango co.
East Sanddy Creek, in *New York*, a village of Oswego co.
East Sangerville, in *Maine*, a post-office of Piscataquis co.
East Scho'dak, in *New York*, a P. O. of Rensselaer co.
East Schuyler, in *New York*, a P. O. of Herkimer co.
East Scott, in *New York*, a post-office of Cortland co.
East Setauket, in *New York*, a P. O. of Suffolk co.
East Sha'ron, in *Massachusetts*, a village of Norfolk co., abt. 20 m. S.S.W. of Boston.
East Sharon, in *Pennsylvania*, a P. O. of Potter co.
East Sharpsburg, in *Pennsylvania*, a post-office of Blair co.
East Sheffield, in *Massachusetts*, a village of Berkshire co., abt. 32 m. W. of Springfield.
East Shelburne, in *Massachusetts*, a post-office of Franklin co.
East Shelby, in *New York*, a post-village of Orleans co., abt. 140 m. W.N.W. of Albany.
East Shel'don, in *Vermont*, a P. O. of Franklin co.
East Sidney, in *Ohio*, a village of Shelby co., on the Miami river, opposite Sidney, the county-seat, abt. 72 m. N.W. of Columbus.
East Smithfield, in *Pennsylvania*, a post-office of Bradford co.
East Somerville, in *Massachusetts*, a former P. O. of Middlesex co.
East Springfield, in *New Hampshire*, a post-office of Sullivan co.
East Springfield, in *New York*, a post-village of Otsego co., abt. 60 m. W. of Albany.
East Springfield, in *Ohio*, a post-village of Jefferson co., about 120 m. E.N.E. of Columbus.
East Springfield, in *Pennsylvania*, a post-office of Erie co.
East Springhill, in *Pennsylvania*, a former P. O. of Bradford co.
East Springwater, in *New York*, a village of Livingston co., abt. 215 m. W. of Albany.
East Stoneham, in *Maine*, a P. O. of Oxford co.
East Stoughton, in *Massachusetts*, a village of Norfolk co., abt. 17 m. S. of Boston.
East Suffield, in *Connecticut*, a village of Hartford co., about 18 m. N. of Hartford.
East Sullivan, in *Maine*, a P. O. of Hancock co.
East Sul'tivan, in *New Hampshire*, a post-office of Cheshire co.
East Sumner, in *Maine*, a post-office of Oxford co.
East Tann'ton, in *Massachusetts*, a P. O. of Bristol co.
East Ta'was, in *Michigan*, a post-office of Iosco co.
East Templeton, in *Massachusetts*, a post-office of Worcester co.
East Tennessee University. See KNOXVILLE.
East Thom'aston, in *Maine*. See ROCKLAND.
East Thomp'son, in *Connecticut*, a post-office of Windham co.
East Tole'do, in *Ohio*, a post-office of Lucas co.
East town, in *Pennsylvania*, a township of Chester co.; pop. (1897) about 1,900.
East Town'send, in *Ohio*, a P. O. of Huron co.
East Town'send, in *Vermont*, a village of Windham co., about 95 m. S. of Montpelier.
East Traverse Bay, in *Michigan*, a former P. O. of Grand Traverse co.
East Tren'ton, in *Me.*, a former P. O. of Hancock co.
East Troups'burgh, in *New York*, a post-office of Steuben co.
East Troy, in *Pennsylvania*, a P. O. of Bradford co.
East Troy, in *Wisconsin*, a post-village and township of Walworth county, about 32 miles S.W. of Milwaukee.
East Turn'bull, in *Ohio*, a P. O. of Ashtabula co.
East Turner, in *Maine*, a P. O. of Androscoggin co.
East Unadilla, in *New York*, a former post-office of Otsego co.
East Union, in *Ohio*, a village of Coshocton co., about 18 m. W. of Coshocton.
 —A post-township of Wayne co., about 100 m. N.E. of Columbus.
East Un'ity, in *New Hampshire*, a post-village of Sullivan co., about 40 m. W. by N. of Concord.
East Var'iek, in *New York*, a P. O. of Seneca co.
East Vas'salborough, in *Maine*, a post-village of Kennebec co., about 16 m. N.E. of Augusta.
East Ven'ice, in *New York*, a P. O. of Cayuga co.
Eastville, in *Alabama*, a village of Randolph co., abt. 160 m. E. of Tuscaloosa.
Eastville, in *Virginia*, a post-village, cap. of Northampton county, about 180 miles E. by S. of Richmond.
East Vin'cent, in *Pennsylvania*, a township of Chester co.
East Vir'gil, in *New York*, a post-village of Cortland co., about 130 m. W. of Albany.
East Wake'field, in *New Hampshire*, a post-office of Carroll co.
East Wales, in *Maine*, a P. O. of Androscoggin co.
East Wall'ingford, in *Vermont*, a P. O. of Rutland co.

East Wal'pole, in *Massachusetts*, a P. O. of Norfolk co.
East Wal'ton, in *Michigan*, a village of Eaton co.
Eastward, adv. Toward the east; in the direction of east from some point or place.

"Eastward . . . I saw descending light." — Milton.

East Ware'ham, in *Massachusetts*, a post-village of Plymouth co., about 50 m. S. by E. of Boston.

East War'ren, in *Vermont*, a P. O. of Washington co.

East Wash'ington, in *New Hampshire*, a post-village of Sullivan co., about 33 m. E. by S. of Concord.

East Waterborough, in *Maine*, a post-office of York co.

East Wa'terford, in *Pennsylvania*, a post-village of Juniata co., on Tuscarora Creek, about 50 m. N.W. of Harrisburg.

East Weare, in *New Hampshire*, a post-village of Hillsborough co., about 16 m. N.W. of Manchester.

East Westmoreland, in *New Hampshire*, a post-village of Cheshire co., abt. 13 m. S.S.E. of Bellows Falls.

East West'ville, in *Ohio*, a village of Mahoning co., about 150 m. N.E. of Columbus.

East Wey'mouth, in *Massachusetts*, a post-village of Norfolk co., about 15 m. S.S.E. of Boston.

East White'ty, in *Massachusetts*, a post-village of Franklin co., about 80 m. W. of Boston.

East Wheat'field, in *Pennsylvania*, a township of Indiana co.

East Wheat'land, in *Illinois*, a P. O. of Will co.

East White'land, in *Pennsylvania*, a township of Chester co.

East Wil'son, in *New York*, a P. O. of Niagara co.

East Wil'ton, in *Maine*, a post-village of Franklin co., about 4 m. S.S.W. of Farmington.

East Wil'ton, in *New Hampshire*, a village of Hillsborough co., about 15 m. N.W. of Nashua.

East Wind'ham, in *Maine*, a P. O. of Cumberland co.

East Wind'ham, in *New York*, a P. O. of Greene co.

East Wind'sor, in *Connecticut*, a post-town of Hartford co., on the Connecticut river, abt. 10 m. N.N.E. of the city of Hartford. See EAST WINDSOR HILL.

East Wind'sor, in *Massachusetts*, a post-office of Berkshire co.

East Wind'sor, in *New Jersey*, a township of Mercer co.

East Windsor Hill, in *Conn.*, a p.-v. of Hartford co., 9 m. from Hartford. The Connecticut Theological Institute, until its removal to Hartford, was located here.

East Win'throp, in *Maine*, a P. O. of Kennebec co.

East Wo'burn, in *Massachusetts*, a village of Middlesex co., about 8 m. N.N.W. of Boston.

East Wood'mill, in *N.Y.*, a former P. O. of Steuben co.

East Wood'stock, in *Connecticut*, a post-office of Windham co.

East Worcester, (woos'ter), in *New York*, a post-village of Otsego co., about 53 m. W. by S. of Albany.

East Wright'stown, in *Wisconsin*, a post-office of Brown co.

Easy, (ē'ze), a. [From *ease*.] Being at ease or rest; quiet; calm; free from pain, disturbance, or annoyance; as, an easy condition of body. — Tranquil; free from anxiety, care, solicitude, or peevishness; as, an easy state of mind. — Free from constraint, formality, or stiffness; smooth; not harsh; as, an easy style of writing. — Not difficult; that gives or requires no great labor, exertion, fatigue, or discomfort; that presents no great obstacles; as, an easy task. — Giving ease or rest; affording relief or comfort from mental cares or trials; affluent; as, a person in easy circumstances. — Gentle; moderate; yielding with little or no resistance; compliant; ready; credulous; as, an easy temper, an easy mood. — Freeing from exertion, turmoil, or difficulty; causing repose, or a sensation of pleasure or relief; as, an easy-chair. — Not pinched, straitened, or embarrassed; as, the money-market is easy. (Opposed to *tight*.)

(Naut.) Applied to a ship that moves over the sea without jerking or straining. In steamboats it is also the word of command to the engineer, when a less degree of speed is required; in this sense it is also pronounced *ease her*.

Easy-chair, n. A luxurious, padded, or cushioned arm-chair, adapted for ease or rest.

Eat, v. a. (imp. EAT or ATE; pp. EATEN.) [A. S. *etan*; D. *eten*; Ger. *essen*; Gr. *ēdō*; Sansk. *ad*.] To bite, or chew, and swallow, as food; as, to eat a good dinner. — To wear away; to separate parts of a thing gradually; to gnaw; to corrode; to consume by degrees; to prey upon; sometimes followed by *up*; as, *eaten up* with cares, *rust eats up* iron, &c.

To eat one's words, to retract words uttered; to take back or withdraw an assertion. — To eat out, to consume; to cause to disappear entirely.

—v. n. To take food; to feed; to take a meal, or to board; to consume solid — as opposed to liquid — nourishment.

"He hath eaten me out of house and home." — Shaks.

—To taste; to relish; to have appetizing or digestive quality; as, "the flesh of the hedge-hog eats like chicken." — To corrode; to gnaw; to wear away gradually; often preceding *in* or *into*.

"A prince's court eats too much into the income of a poor state." Addison.

Eat'able, a. That may be eaten; suitable or fit to be eaten; proper food; edible; as, *eatable* beef.

—n. Anything that may be eaten; that which is fit or proper for food; any edible substance; that which is used for food; opposed to *drinkable*.

Eat'age, n. See EDDISH.

Eat'er, n. One who eats; that which eats or corrodes; a corrosive.

E'at in'de si'ne die. [Lat.] (Law.) Words used on

the acquittal of a defendant, or when a prisoner is to be discharged, that he may go thence without a day, i. e. without any further continuance or adjournment.

Eat'ing, n. The act of chewing and swallowing.

Eat'ing-house, n. A house where provisions are sold ready dressed for consumption on the premises; a dining place; a restaurant. (In England, sometimes called *cook-shops*.)

Eat'on, in *Illinois*, a post-office of Crawford co.

Eaton, in *Indiana*, a post-office of Delaware co.

Eaton, in *Maine*, a post-office of Washington co.

Eaton, in *Michigan*, a S. central co.; area, 580 sq. m. Rivers. Grand river, and Thornapple and Battle creeks. Surface, undulating; soil, fertile. Cap. Charlotte. Pop. (1894) 32,612.

—A village of Benton township, Eaton co., on Thornapple creek, about 20 m. S.W. of Lansing.

—A township of Eaton county, about 18 miles S.W. of Lansing.

Eaton, in *Missouri*, a village of Cedar co.

Eaton, in *New Hampshire*, a township of Carroll co., about 60 m. N.N.E. of Concord.

Eaton, in *New York*, a post-village and township of Madison county, about 100 miles W. of the city of Albany.

Eaton, in *Ohio*, a village of Fayette co., about 160 m. N.N.E. of Jackson.

—A township of Lorain co.

—A post-village of Washington township, and the cap. of Preble co., on the Seven Mile Creek, 46 m. N. of Cincinnati.

Eaton, in *Pennsylvania*, a post-township of Wyoming co., on the N. Branch of the Susquehanna River, opposite Tunkhannock.

Eaton, in *Tennessee*, a post-village of Gibson co., on the Forked Deer river, about 143 m. W. of Nashville.

Eaton, in *Wisconsin*, a township of Brown co., about 8 m. E.S.E. of Green Bay.

—A post-township of Manitowoc co., about 16 m. W.S.W. of Manitowoc.

—A township of Clark co.

Eat'on Cen'tre, in *New Hampshire*, a post-village of Carroll co., about 60 m. N.E. of Concord.

Eat'on Rap'ids, in *Michigan*, a fine city and township of Eaton co., on Grand river, 18 m. S.W. of Lansing. Manuf. of edge tools, &c. Pop. (1897) abt. 1,400.

Eat'on's Cor'ners, in *New York*, a village of Schenectady co., about 30 m. N.W. of Albany.

Eaton's Neck, in *New York, on the E. side of the entrance to Huntington's Bay, Long Island. It has a fixed light, 134 feet above the sea-level; Lat. 40° 57' 5" N., Lon. 73° 24' 12" W.*

Eat'onton, in *Georgia*, a city, cap. of Putnam co., about 22 m. N.N.W. of Milledgeville. Pop. (1897) abt. 1,725.

Eat'ontown, in *New Jersey*, a post-township of Monmouth co., about 11 m. E. of Freehold. Pop. about 800.

Eat'onville, in *New York*, a village of Herkimer co., about 75 m. W. by N. of Albany.

Eau Claire, in *Michigan*, a post-office of Berrien co.

Eau Claire, in *Pennsylvania*, a P. O. of Butler co.

Eau Claire, in *Wisconsin*, a W. co.; area, about 641 sq. m. Rivers. Chippewa and Eau Claire rivers, and Otter creek. Surface, uneven; soil, fertile. Cap. Eau Claire. Pop. (1895) 33,172.

—A thriving city, cap. of Eau Claire co., at the junction of the Eau Claire and Chippewa rivers, on 4 railroad lines 84 m. E. of St. Paul, Minn. Has very extensive water power and important lumbering interests, consuming over 300,000,000 feet of lumber annually; besides numerous other manufactures. Pop. (1897) abt. 20,000.

—A village of Eau Claire co., on the Chippewa River, opposite Eau Claire, the county-seat.

Eau Claire River, [Fr., Clear Water,] in *Wisconsin* rises in Clark co., and after flowing first S., then W. to the Chippewa River, it enters the latter near the village of Eau Claire.

Eau-de-Cologne, (ō-de-ko-lōn') n. [Fr. *eau*, water and *Cologne*.] Cologne water; a favorite perfume named from the city of Cologne, where its manufacture is extensively carried on. Its inventor and most famous maker was Jean Marie Farina. It consists of alcohol perfumed with essential oils. Numerous recipes are given for this grateful and refreshing perfume, most of which are very complicated, from the great number of ingredients. Lebeand and Fontenelle give the following: dried rosemary, thyme, sweet marjoram, wormwood, balm, and hyssop, 1 oz. each; cloves, cinnamon, angelica root, juniper-berries, anise, cummin, fennel and caraway-seeds, fresh orange-peel, and oil of bergamot, 1 oz. each; cardamoms, lavender-flowers, and bruised nutmegs, each 2 oz.; the whole to be digested in 10 quarts of alcohol several days, and then distilled dryness by water-bath. Purity of the ingredients, and freedom especially of the alcohol from fusel-oil, are essential to the perfection of the perfume.

Eau-de-Luce, (ō-de-lūs), n. [Fr. *eau*, and *Luce*, name of the chemist who invented it.] (Med.) A strong solution of ammonia, scented and rendered milky by the addition of a little mastic and oil of amber. It is considered an effective remedy in India against the bite of poisonous snakes.

Eau-de-vie, n. [Fr., water of life.] The name given by the French to BRANDY, q. v.

Eau Galle, in *Wisconsin*, a post-township of Dunn co., abt. 10 m. S.W. of Menomonie.

—A village of Pepin co., on the Eau Galle River, abt. m. N.N.E. of Pepin.

—A township of St Croix co.

Eau Pleine, in *Wisconsin*, a post-township of Portage co., abt. 12 m. N.W. of Stanton.

aux Bonnes, ("good waters,") a town of France, dep. Pyrénées. 20 m. S.S.E. of Oloron, celebrated for its thermal springs, considered beneficial in pulmonary diseases.

aves, (*eevz*), *n. pl.* (*Arch.*) The lower edge of a sloping roof which overhangs the face of a wall, for the purpose of throwing off the water.

aves'board, **Eaves'catch**, **Eaves'lath**, *n.* (*Arch.*) An aris fillet, or thick, feather-edged board, laced at the eaves of a roof, for raising the bottom of the first course of slates above the sloping plane of the side of the roof, so that the next course may be properly eaded.

Eaves'drop, *v. n.* To stand under the eaves or near the windows of a house, to listen to what is spoken by persons within-doors:—hence, to watch and wait for chances of hearing the private conversation of others.

Eaves'dropper, *n.* One who listens to that which is not intended for his ears. (See the verb.)

"Under our tents I'll play the eavesdropper."—*Shaks.*

Elys'town, in *New Jersey*, a post-village of Burlington co., on the S. branch of Raucocas Creek, abt. 4 m. of Mount Holly.

Eb, *n.* [*A.S.*, *Ger.*, and *Dan.* *ebbe*; *Fris.* *ebba*; *D.* *ebbe*; *apo.*; *Sansk.* *apa*, down.] The reflux of the tide; a return of tide-water toward the sea;—correlative *flood*; as, the tide is at *ebb*.—A falling from a better to a worse state; decay; decline.

"Painting was then at its lowest *ebb*."—*Dryden*.

Ebb, *n.* [*A.S.* *ebban*.] To recede; to flow back, as the water of a tide toward the ocean.

"It *ebb'd* much faster than it flowed before."—*Dryden*.

Ebb, *v.* To retrograde; to return or fall back from a better to a worse state; to decrease; to decline; to decay; to sink lower; as, "The hours of life *ebb* fast."—*Blackmore*.

Ebb-tide, *n.* The retiring tide; the reflux of tide-water.

Eed Mel'lech, ("servant of the King,") an Ethiopian officer of King Zedekiah, noted for his piety.

Eena'ceæ, *n.* [From *Arab.* *abnous*; *Lat.* *ebenus*; *Sp.* *mo*, ebony.] (*Bot.*) The Ebony family, an order of plants, alliance *Gentianales*.—*DIAG.* No stipules, and simple sessile radiating stigma. They are trees or shrubs, without milk and with heavy wood; leaves alternate. Flowers polygamous; calyx 3-7 parted; inferior, persistent corolla 3-7 parted; stamens equal in number to the divisions of the corolla, or twice, or in times as many, and attached to the corolla, or pogynous; anthers 2-celled, introrse, opening longitudinally; ovary 3-12-celled, each cell with one or two ovules suspended from the apex; style usually having as many divisions as there are cells to the ovary, fruit fleshy; seeds large, albuminous. Many of the *E.* are remarkable for the hardness of their timber, which is known under the names of ebony and iron-wood. Many species have edible fruits, and some have astringent barks. The ord. includes 9 genera and 160 species.

Ebenus, (*Heb.*, the stone of help.) The field in which the Israelites were defeated when the ark of God was taken (1 *Sam.* iv. 1);—so called from the memorial stone or monument set up by Sammel to commemorate the defeat of the Philistines at Mizpeh, when God imposed for their deliverance (1 *Sam.* vii. 5-12).

Eben'zer, in *Georgia*, a village of Effingham co., on Savannah River, abt. 25 m. above Savannah.

Eben'zer, in *Mississippi*, a village of Holmes co.

Eben'zer, in *Missouri*, a post-office of Greene co.

Eben'zer, in *New York*, a post-office of Erie co.

Eben'zer, in *Ohio*, a post-office of Preble co.

Eben'zer, in *Pennsylvania*, a P. O. of Indiana co.

Eben'zer Creek, in *Georgia*, enters the Savannah river from Effingham co., abt. 9 m. E. of Springfield.

Eben'zerville, in *S. Carolina*, a village of York dist., 80 m. N. of Columbia.

Ebn'burg, in *Pennsylvania*, a post-borough, cap. of Ebnria county, about 74 miles E. by N. of Pittsburgh.

Ebn'bach, a village of Nassau, Germany, 3 m. from Hattenheim, famed for producing one of the best wines in the district.

Ebn'hard, JOHANN AUGUST, a German philosopher, b. Halberstadt, 1739. He studied at Halle, and entered the Church, but his advance was hindered by suspicious of his orthodoxy. The influence of Frederick the Great secured him the post of preacher at Charlottenburg, afterwards became professor at Halle, and for some distinguished himself by his opposition to the philosophy of Kant. E. was a follower of Leibnitz. His philosophical works are, a *Neue Apologie des Sokrates*; *Ueber das Denken und Empfinden*; *Sittenlehre der Vernunft*; *Theorie der schönen Künste und Wissenschaften*.

He was also author of a valuable dictionary of synonyms, *Versuch einer Allgemeinen Deutschen Synonymik*, and contributed numerous papers to periodical literature. He was a privy councillor of the King of Prussia, and a member of the Academy of Berlin. D. 1809.

Ebn'lee, in *Indiana*, a village of Putnam co., about 7 N.E. of Greencastle.

Ebn'leville, in *Pennsylvania*, a vill. of Lancaster co.

Ebn'ly's Mill, in *Pennsylvania*, a post-office of Cumberland co.

Ebn'burg, a village in the Bavarian Palatinate, 20 S.W. of Mayence; noted on account of the ruins of a castle, which formerly belonged to the knight Franz Sickingen. His stronghold, which was once reputed most impregnable, afforded a secure retreat to Melancthon, Bucer, Occolampadius, and Ulrich von Hutten.

Ebersbach, Upper and Lower, a town of Saxony, one of the chief seats of the linen manufacture in that country; *pop.* 6,480.

Ebersberg, a town of Upper Austria, on the Traun, 8 m. from Ens. The French defeated the Austrians here, May 3, 1809.

Ebionites, *n. pl.* (*Eccl. Hist.*) A sect (referred by Mosheim to the second century) who believed in Christ as an inspired messenger of God, but considered him to be at the same time a mere man, born of Joseph and Mary. They maintained, also, the universal obligation of the Mosaic law, and rejected the authority of St. Paul. The origin of their name is uncertain, some deriving it from that of their supposed founder; others deduce it from a Hebrew word signifying *poor*, and suppose the title to be given to them in reference either to the poverty of the class to which they mostly belonged, or the meanness of their doctrine. The sect was in existence in the 4th century.

Eb'lanine, *n.* (*Chem.*) A yellow crystalline substance, resulting from the action of potash on wood-spirit.

Eb'lis, *n.* (*Eastern Myth.*) Among Orientals, an evil genius, spirit, or devil; as, the halls of *Eblis*.

Eboli, a town of S. Italy, 16 m. E.S.E. of Salerno; *pop.* 8,167.

Eb'ony, *a.* Consisting of ebony; like ebony; black; as, "night's *ebony* throne."—*Gay*.

Eb'onist, *n.* A worker in ebony.

Eb'onize, *v. a.* To make black; to stain like the color of ebony.

Eb'ony, *n.* [*Fr.* *ébène*; *Lat.* *ebenus*; *Gr.* *ebēnos*; *Heb.* *hob-nim*, from *eben*, a stone.] The hard wood of various species of *Diospyros*, q. v. It is heavier than water, gives off an aromatic odor when burnt, and takes a good polish. It is used for cabinet, mosaic, and turnery work, for flutes, handles of doors, knives, and surgical instruments, and for pianoforte keys, &c.

Ebor'ans, *n.* [*Lat.*] A term applied by the Romans to a kind of ivory work.

Ebonlement, (*â-bôol'mong*), *n.* [*Fr.*] (*Mil.*) The crumbling of a wall or rampart.

Ebrac'teate, *a.* [*Fr.* *ebracteé*.] (*Bot.*) Having no bracts.

Ebrac'teolate, *a.* (*Bot.*) Without bracteoles.

Ebri'ety, *n.* [*Lat.* *ebrietas*, from *ebrius*, intoxicated.] Drunkenness; intoxication by alcoholic liquors; inebriety.

Ebri'lade, *n.* [*Fr.*] (*Man.*) A check of the bridle, by a jerk of one rein when a horse refuses to turn.

Ebrios'ity, *n.* [*Lat.* *ebriositas*. See *EBRIETY*.] Habitual drunkenness.

Ebri'ous, *a.* [*Lat.* *ebrius*.] Inclined to drink to excess.

Ebro, (*ai'bro*), (anc. *Iberus*), one of the largest rivers in Spain, which rises in the prov. of Santander, Lat. 43° N., Lon. 4° W., and after a S.E. course of 350 m., terminates by a delta in the Mediterranean, between the promontories of Del Fangal and De los Alfaques, Lat. 46° 40' N., Lon. 0° 55' E.

Ebullience, **Ebulliency**, (*e-bul'yens*), *n.* A boiling over.

Ebullient, *a.* Boiling over, as a liquor.

Ebullition, (*ê bul-lish'un*), *n.* [*Fr.*, from *L. Lat.* *ebullitio*, from *ebullio*—*e*, *ex*, and *bullio*, to boil. See *BOIL*.] The agitation of liquids when they are heated to their boiling-point. On heating water gradually in a glass flask, by means of a spirit-lamp, the air in the water expands and forms minute bubbles, which escape through the liquid with great rapidity. Larger bubbles of steam are then formed on the bottom of the vessel, which rise a little way in the liquid and are condensed, disappearing with a hissing or simmering sound. When these bubbles rise through the surface and escape, the liquid is said to be in a state of *ebullition*. The temperature at which ebullition takes place varies with the pressure of the atmosphere and the nature of the liquid. When the barometer stands at 30 inches, water boils at 212° Fahr., because at this temperature the elastic force of steam will support 30 inches of mercury, and its bubbles, consequently, have the power of breaking through the surface of the heated liquid.—See *BOILING-POINT*.

—A sudden burst of mental feeling; a pouring forth; outbreak of disposition; effort; as, an *ebullition* of ill-temper.

Ebur'na, *n.* [From *Lat.* *ebur*, ivory.] (*Zool.*) A genus of marine Mollusca, found in the Indian and Chinese seas, inhabiting an oval, thick, smooth, umbilicated shell.

Ebur'neau, *a.* [*Lat.* *eburneus*.] Made of ivory.

Eburnification, *n.* [From *Lat.* *ebur*, ivory, and *facere*, to make.] Act of converting into the substance or resemblance of ivory.

Ecarté, *n.* [*Fr.*, discarded.] (*Games*.) A game at cards for two persons, played with a pack of 32 cards, all from the 6 to the 2 being excluded. It has been long very popular in France. The object is to win tricks, as at Whist, and the play being regulated in the same manner, except that the second player must win the trick if he can, either by a higher card, or by trumping, if he cannot follow suit.

Ecaudate, *a.* [*Lat.* *ecaudatus*. See *CAUDATE*.] (*Bot.*) Having no tail;—said of plants.

Ecbatium, *n.* [*Gr.* *ekballo*, I cast out, expel.] (*Bot.*) A genus of plants, order *Cucurbitacea*. The species *E. officinarum* is commonly called the squirting cucumber, from the fruit separating when ripe, from its stalk, and expelling its seeds and juice with much violence. It is a native of the S. of Europe. The feculence deposited from the juice of the fruit, when dried, constitutes the drug called elaterium, or extract of elaterium, which is

a powerful hydragogue cathartic. It is given when pure in doses of from $\frac{1}{15}$ th to $\frac{1}{8}$ th of a grain. In improper doses it is an irritant poison. Elaterium owes its properties to a bitter principle named *elaterin*.

Ec'basis, *n.* [*Gr.*, from *ekbaino*, to go out from.] (*Rhet.*) A figure by which the orator treats of things according to their issue or consequence.

Ecbatana, (*ek-bâl'a-na*), (*Anc. Geog.*) The capital of Media. This city is said to have been founded by Semiramis, though Herodotus mentions Dejeos as its founder. An account of the building of the city by Arphaxad is given in the Book of Judith (i. 2-4). It was the summer residence of Cyrus and the succeeding kings of Persia. It is mentioned by Ezra under the name of Achmetha, and the modern Hamadan occupies its site.

Ec'bole, *n.* [*Gr.* *ekbolē*.] (*Rhet.*) A digression or figure by which the narrator introduces another person speaking his own words.

Eccaleo'bion, *n.* [*Gr.* *ekkalein*, to call out of, and *bios*, life.] An apparatus for the artificial incubation of eggs.

Ecce homo, (*ek'se ho'mo*), [*Lat.*, behold the man.] (*Fine Arts.*) A term applied to those pictures which

Fig. 901. — ECCE HOMO.
(From a painting by Guido.)

represent Christ wearing the crown of thorns, and bound ready for execution. Many of the greatest painters have employed their highest efforts upon this subject.

Eccentric, **Eccentric**, (*ek-sen'trik*), *a.* [*Fr.* *excentrique*, from *L. Lat.* *eccentricus*—*ex*, and *centrum*, centre. See *CENTRE*.] Deviating or departing from the centre; not having its axis in the centre, as any revolving motion or wheel; as, an *eccentric* orbit.—Not having the same centre, as circles, or spheres: in contradistinction from *concentric*.—Not terminating in the same point, or governed by the same principle; as, "*eccentric* ends." (*Bacon*).—Deviating from stated methods, usual practice, or established customs, forms, or laws; departing from the usual course; irregular; anomalous; singular; odd; wayward; strange; whimsical; as, *eccentric* habits.

—*n.* A circle not having the same centre with another circle, when one lies within the other.

—He who, or that which, deviates from settled form or established usage, or from regularity of method; an anomalous person or thing; as, that man is quite an *eccentric*.

(*Astron.*) The supposed circular orbit of a planet about the earth, but with the earth not in its centre, in the Ptolemaic system.—A circle described about the centre of an elliptical orbit, with half the major axes for radii.

(*Mach.*) A sort of wheel, or revolving disc, in which the axis, or centre of motion, does not coincide with the geometrical centre. There are a great variety of eccentrics, and they are very useful in converting one kind of motion into another. By this means, continuous circular motion can be converted into alternating or intermitting rectilinear motion, or into curvilinear, but not rotary motion. Eccentrics may be driven by straps or bands; the bands, however, require to be extremely elastic, or it will be necessary to apply a stretching pulley or roller, which can be pressed against the strap by the action of a weight. By this means a uniform degree of tension is attained.

Eccen'trically, *adv.* In an eccentric manner; with eccentricity.

(*Bot.*) Disposed irregularly; deviating from the centre.

Eccen'tric-chuck, *n.* (*Mach.*) A chuck for a lathe, so constituted that the work performed by it may be produced in combinations of eccentric circles.

Eccen'tric-gear, (*jî'er'*) *n.* (*Mach.*) The gear involved in the working of an eccentric, as in its application to a steam-engine.

Eccen'tric-hook, *n.* (*Mach.*) See V-HOOK.

Eccen'tric-hoops, *n. pl.* (*Mach.*) Bands fitted round the projecting part of the eccentric sheaves of a locomotive-engine, to strengthen them.

Eccentricity, (*ek-sen-tris'i-ti*), *n.* [*Fr. excentricité.*] State of having a centre differing from that of another circle; as, the sun's *eccentricity* to the earth. — Departure or deviation from that which is stated, regular, or usual; irregularity; oddness; singularity; whimsicalness.

"Swift was a man of undoubted ability, but of singular *eccentricity*." — *Davies.*

(*Astron.*) The difference of the centre of a planet's orbit from the centre of the sun, or the distance between the centre of an ellipse and either of its foci.

Eccen'tric-rod, *n.* (*Mach.*) The rod connecting the eccentric-strap to the lever which moves the slide-valve.

Eccen'tric-rod and Strap, *n.* (*Mach.*) The rod, the strap-end of which encircles the eccentric-sheave, while the other end connects it with the quadrant, or *rocking-shaft*, according to the class of a locomotive-engine. In some engines the end is forked to go on the stud of the *rocking-shaft*, and opens out something like the letter V; or when only one rod is used for both back and forward movements, it resembles the letter X. In other engines it is attached to the quadrants by a bolt, one rod for forward gear, and another rod for backward gear.

Eccen'tric-strap, *n.* (*Mach.*) A brass ring formed by two pieces bolted together, and fixed to the eccentric-rod of a steam-engine; the ring fits a grooved part in the circumference of an eccentric.

Ecce signum, [*Lat.*] See the sign of proof.

Ecchymosis, (*ek-ke-mo'sis*), *n.* [*Gr. ek*, out of, *chumos*, juice.] (*Surg.*) Any discoloration of the skin, caused by the effusion of blood into the cellular tissue below it. The most intelligible explanation of an ecchymosis is in the familiar instance of a black eye. Ecchymosis is in general produced by a blow, fall, or a bruise, which, rupturing some small vein beneath the cuticle, the blood escapes into the cells of the membrane, and, showing through the transparent cuticle, gives the livid appearance which forms the character of the injury. Sometimes in cases of great constitutional debility and physical relaxation, as in scurvy or typhus, the small superficial vessels give way without violence or injury, causing those purple patches on the body so serious a symptom of the disease, and known as *petechia*.

Ecclesia, *n.* [*Lat.*, from *Gr. ekklesia*.] (*Greek Hist.*) Among the Greeks, the public assembly in which the Athenians met to legislate and deliberate. — An ecclesiastical body, society, or assembly.

Ecclesiarch, (*ek-kle'zi-ark*), *n.* [*Fr. ecclésiarque*, from *Gr. ekklesia*.] An ecclesiastical ruler or dignitary.

Ecclesiast, *n.* An ecclesiastic.

Ecclesiastes, or THE PREACHER, (*ek-kle-ze-as'teez*), *n.* (*Scrip.*) The name of one of the canonical books of the Old Testament, placed after Proverbs and before the Song of Solomon. These names are a translation of the Hebrew title *Koheleth*, the former of the two being adopted from the Greek Septuagint. There is no room to doubt the canonicity of this book. It has occupied a place in the Jewish Canon from the earliest times, and has been universally received by the Christian Church. From some passages in the Talmud, however, some seem to have questioned the expediency of placing it among the Scriptures that were read publicly, on account of its containing "words tending to heresy," and "words contradictory to each other." According to tradition, this book was among the Scriptures which were not allowed to be read by any one under the age of thirty. Numerous questions have been started regarding the authorship, date, design, and plan of this book. Many critics contend that it could not have been written by Solomon, which is the generally received opinion, on account of numerous foreign and modern words that occur in it. In favor, however, of the common opinion, there is the unqualified testimony of the book itself, the author speaking of himself as the son of David, king of Israel, and the greatest possessor of wealth and wisdom in Jerusalem. The long intercourse of Solomon, too, with the representatives of foreign nations, and his foreign wives, would necessarily lead to the introduction of numerous foreign words and phrases in his writings. The book is generally believed to have been written in his old age, after he had experienced all the pleasures and follies of life, and was able to testify to their being all vanity and vexation of spirit. The plan and scope of the book are very obscure, and have given much trouble to commentators. Some have regarded it as a series of dialogues and disjointed narratives, rival poems, literary discussions, ethical aphorisms, and unfinished practical essays. The most plausible ground for regarding it as the work of a variety of authors arises from the frequency and abruptness of its transitions, and the apparent want of any fixed plan. The great theme of the book is the vanity of all earthly things and labor; with this it begins and with this it closes. It is as far removed as possible from the character of a formal treatise, — being the confessions of a man of wide experience, — being the searches after truth and happiness, of his many disappointments, and of his ultimate success.

Ecclesiast'ic, **Ecclesiast'ical**, *a.* [*Gr. ekklesiastikos*, from *ekklesia*, an assembly, a church, from *ekhalō* — *ek* or *ex*, out, out of, and *halō*, to call. See CALL.] Pertaining or relating to the church; not civil or secular; as, *ecclesiastical* affairs.

"Is discipline an *ecclesiastical* matter or civil?" — *Hooker.*

Ecclesiast'ic, *n.* A person consecrated to the service of the church and the ministry of religion; a person in holy orders; a priest; a divine; a clergyman.

"The ambition of the *ecclesiastics* destroyed the purity of the Church." — *Bishop Burnet.*

Ecclesiast'ically, *a.* In an ecclesiastical or sacerdotal manner; according to ecclesiastical rules and regulations.

Ecclesiast'ical States, *n. pl.* (*Geog.*) See STATES OF THE CHURCH.

Ecclesiast'icism, *n.* Fixed inclination or attention to ecclesiastical matters generally.

Ecclesiast'icus, *n.* (*Script.*) A book of the Apocrypha, *q. v.*, called in the Septuagint, "The Wisdom of Jesus the son of Sirach," the date of whose life is not known. It was translated into Greek, according to some authorities, about B. C. 230, though others assign it to B. C. 130. Its name is derived, not from the profession of the author, which is unknown, but from the fact that it was the chief of the *ecclesiasti libri*, or uninspired books, which, from their edifying nature, were accepted as proper to be read in churches. Numerous commentaries were published in the 16th and 17th centuries; Linde's German translation appeared in 1785, and his Greek text in 1795. The more complete version of Bretschneider was published in 1806.

Ecclesiological, (*ek-kle-si-o-log'i-kl*), *a.* Pertaining to ecclesiology.

Ecclesiologist, *n.* One learned in ecclesiology.

Ecclesiology, (*ek-kle-si-o-lo'je*), *n.* [*Gr. ekklesia*, church, and *logos*, discourse.] Science and doctrine of ecclesiastical architecture and decoration.

Eccope, (*ek'ko-pē*), *n.* [*Gr.*] (*Surg.*) The cutting off of any part.

Eccoprot'ic, *a.* [*Fr. eccoprotique.*] (*Med.*) Slightly purgative. (*R.*)

— *n.* (*Med.*) An opening medicine, the operation of which is very gentle, such as manna, senna, &c.

Eccrinology, *n.* [*Gr. ekkrineia*, to select, and *logos*, treatise.] (*Med.*) A treatise on the secretions of the human body.

Ec'crisis, *n.* [*Gr. ekkrisis.*] (*Med.*) A secretion of any kind.

Ec'dysis, *n.* [*Gr. ekdysis.*] Act of moulting or putting forth, as pupæ.

Echacoon'ee, or Tschocun'no, in *Georgia*, a creek, tributary of the Ocmulgee River, which it enters at the S. extremity of Bibb co.

Echacoon'ee, in *Georgia*, a village of Bibb co., on Echacoon'ee Creek.

Echelles (Les), (*ai-shel'*) a village of France, in Savoy, 12 m. from Chambéry. Here a road in the mountains was begun by Napoleon I., and finished by the king of Sardinia in 1817. The place takes its name from a flight of stairs [*Fr. échelles*], formerly the only mode of communication with Chambéry, which this road replaced.

Echelon, (*esh'e-lon*), *n.* [*Fr.*] (*Mil.*) In tactics, a term used to denote the position of an army, when the divisions of which it is composed are marched in parallel lines, but all differently advanced, with the object of bringing one part of them into action and reserving the others.

Ech'iales, *n. pl.* (*Bot.*) An alliance of Peryginous Exogen plants. *DIAG.* Dichlamydeous, monopetalous, symmetrical, or unsymmetrical flowers; nucamentaceous fruit consisting of one-seeded nuts, or of clusters of them separate or separable, and a large embryo with little or no albumen. — The *E.* are separated into the orders *Jasminaceæ*, *Salvadoraceæ*, *Elætiaceæ*, *Nolana-ceæ*, *Boraginaceæ*, *Brunoniaceæ*, *Lamiaceæ*, *Verbenaceæ*, *Myoporaceæ*, and *Selaginaceæ*.

Echidna, (*ek'id'na*), (*Myth.*) A celebrated monster, represented as a lovely woman to the waist, and with the form of a serpent below. By her union with the Typhon she is reported to have been the parent of all the fearful monsters that were afterwards sent by the gods to appall the wicked, and confound the guilty: such as the three-headed dog Cerberus; the water-snake, with her fifty heads, Hydra; the lion-headed dragon, the terror of the Lycian peasant, the Chimæra; the artful virgin with her azure wings hiding her wolfish stomach, and with her subtlety beguiled the Theban youth, the Sphinx; and all the grotesque, hideous, and disgusting monstrosities that the ancient poets have attached to the history of their heroes, are fabled to have sprung from Typhon and *E.*, like Milton's "yelling monsters," begot of Sin and Death.

(*Zoöl.*) The *Porcupine ant-eater*, a curious animal, order *Edentata*, family *Monotremata*. It is a native of Australia, and is a striking instance of that beautiful gradation, so frequently observed in the animal king-

Fig. 902. — PORCUPINE ANT-EATER, (*Echidna hystrix*.)

dom, by which creatures of one tribe or genus approach to those of a very different one. It has the external coating and general appearance of the porcupine, with the mouth and peculiar generic characters of the ant-

eaters. It is about a foot in length; the upper part of the body and tail are thickly coated with strong, very sharp spines, of a yellowish white with black, and thicker in proportion to their length than those of a porcupine. The head, legs, and under parts of body are of a deep brown, and thickly set with bristles; the tail is very short, and covered with spines pointing perpendicularly upwards. The snout is short and tubular, the mouth small, and the tongue long, lumbriciform, as in other ant-eaters. The legs are short and thick, and are each furnished with rounded, broad toes; on the forefeet are five very strong, long, and blunt claws; but on the hind feet there are only four claws, the thumb being destitute of a claw. The first claw on the hind feet is extremely long, curved, and sharp-pointed; the next shorter, but of similar appearance; the two remaining ones are short and blunt; it has great strength, and burrows with wonderful celerity. Two species are known, *E. hystrix* (fig. 902), and *E. setosa*.

Echinacea, *n.* [*Gr. echinos*, the hedge-hog; from character of the paleæ.] (*Bot.*) A genus of plants, *Asteraceæ*. They are annual, herbaceous plants, with alternate leaves, rays purple, pendulous. Two species, *E. purpurea*, the Purple Cone-flower, or Comb-flower, and *E. angustifolia*, are found in the S. and W. States.

Echinades, (now *Kurzolari Islands*), (*Anc. Geog.*) group of islands in the Adriatic, on the coast of Acarnania, and opposite the mouth of the Achelous. According to Pliny they were 9, and to Ovid, 5 in number. They are actually of little importance.

Echin'ate, **Echin'ated**, *a.* [*Lat. echinatus*, with prickles.] (*Zoöl. and Bot.*) Set with spines or prickles, like a hedgehog; having the surface covered with pustules produced into spines.

Echin'eis, *n.* (*Zoöl.*) See SUCKERS.

Echin'idan, *n.* [*Fr. échinide*.] (*Pal.*) A fossil animal resembling the echinus.

Echin'ital, *a.* Having the appearance or properties of an echinite.

Echinite, (*ek'e-nit*), *n.* [*Fr.*] A fossil echinus.

Echinocae'tus, *n.* [*Gr. echinos*, hedge-hog, *cactos*, spiny plant.] (*Bot.*) A genus of plants, ord. *Cactæ*. The stem is nearly globular, and is furrowed with longitudinal grooves, varying in number and depth. The flowers appear on the salient angles of the stem, in the centre of little tufts of bristles and spines. Many species of this genus are in cultivation as stove or greenhouse plants.

Echinodermata (*ek-in-o-dir'ma-ta*), *n. pl.* [*Gr. echinos*, spine, and *derma*, skin.] (*Zoöl.*) A well-defined division of invertebrate animals, including several classes, kuowu familiarly as the Sea Urchins, Starfishes, &c.

Fig. 903.—SEA-URCHIN.

Cucumbers, Battle Stars, Feather Stars, and the extinct Cystoidea and Blastoidea. They are characterized by possessing a well-organized skin, under which are attached to it, are frequently found plates of matter constituting a kind of skeleton. They have a digestive and a vascular system, and a circular nervous system has been detected in many of the species. A muscular system is constantly present. The nutritive apparatus of the *E.* is very simple, presenting in the center of the lower surface of the body, performing the functions both of the mouth and anus; but in some presenting a digestive cavity, with an orifice for the evacuation of its contents, distinct from that by which the food is taken in. The muscular motion is generally present in these animals, but the organs of motion are various, the principal ones being the branched tubes, which can be protruded at will through the ambulacral apertures, and which have been termed the feet. They are all marine animals, and are widely distributed. See ANATOMY, COMPARATIVE.

Echinodermatous, *a.* Belonging or having reference to the echinoderms.

Echinoids, *n. pl.* (*Zoöl.*) An order of the class *Echinodermata*; the SEA-URCHINS, *q. v.*

Echinoph'ora, *n.* (*Bot.*) A genus of plants, ord. *Apiaceæ*, including the Sea-parsnips.

Echinosp'er'mm, *n.* [*Gr. echinos*, sea-urchin, *sperma*, seed.] (*Bot.*) A genus of plants, order *Umbellales*. They are annual herbs, erect, leaves oblong-linear, racemes bracted, pedicels short, erect. One species, *E. lappula*, the Burr-seed, is found in dry soil along road-sides in the N. States.

Echin'ulate, *a.* Covered with minute prickles or processes.

hinnus, (-kī'nus,) *n.*; *pl.* ECHINI. [Lat.] A hedge-hog. (Bot.) The prickly head of a plant, or the cover of a seed.

(Zool.) The SEA-URCHIN, *q. v.*

(Arch.) The egg and anchor, or egg and tongue ornament, found carved on the ovolo in classical architecture. **himm**, *n.* [Gr. *echis*, a viper, from the spotted stem of some species.] (Bot.) A genus of plants, order *Boraginaceae*. They are annual herbs or shrubs; flowers irregular, in spike, panicled racemes; corolla cyanic. An American species, *E. vulgare*, is a rough plant, with large, handsome violet-colored flowers, found in fields and waste grounds.

imiadzin, (-ek-me-ad-zin') the ecclesiastical capital of Armenia, in the Russian dominions, 25 m. from Mt. Ararat. It is the seat of the primate of the Armenian church.

io, (ek'o.) (Myth.) A daughter of the Air and Tellus, who chiefly resided in the vicinity of the Cephissus. She is once one of Juno's attendants, but her loquacity displeased Jupiter, when she was deprived of the power of speech by Juno, and only permitted to answer the questions which were put to her. After she had been punished by Juno, she pined away through love of Actæon.

Acoustics, (*ak-oo-stiks*) *n.* A sound reflected from a distant surface, and repeated to the ear. Sound is produced by waves of pulses of the air. When these waves come in contact with a cliff or wall, or other opposing surface, they are reflected like light or heat. When the sound is so reflected as to come back to the observer's ear, it is called *echo*. In order that the echo may be heard at the place where the sound originated, it is necessary that the reflecting surface should be at right angles to the line drawn to the point where the observer stands. An oblique wall throws off the echo so that it can be heard by others, but not by the originator of the sound. The most perfect echoes come from surfaces that are either plane, or curved so as to be in the form of a concave mirror. This, however, is not necessary; for a very faint echo is often returned from the edge of a wood. Sound travels at the rate of 1,125 feet in a second; consequently it is necessary, in order to obtain an echo, to be at least 62 feet from the reflecting surface, and 1-9th of a second must be allowed to elapse in order to distinguish the sound from the echo. When nearer than this distance, the echo blends with the original sound, making both indistinct. In many churches and public halls, where the principles of acoustics have not been considered, the multitudinous echoes drown the speaker's voice. The distribution of sound in public buildings, so that the echoes may assist in strengthening the original sound, is a subject of great importance. An ingenious clergyman of Cambridge invented a parabolic reflector, which had the effect of stunning him while he preached, however impartially the subject of his discourse was imparted to his congregation. When several objects reflect sound, the number of echoes is multiplied, the sounds growing weaker and weaker until they die away. In order to produce many sounds, the reflecting plane must be at a considerable distance. At a distance of 100 feet there is an echo that repeats about twenty syllables, and the Swiss mountaineers sing their songs, especially the *Ranz des Vaches*, in such a manner that the echo forms an accompaniment to the air. The number of syllables that an echo will repeat depends, of course, on the distance of the reflecting surface from the origin of the sound. At the tomb of Metella, in the Campagna, near Rome, there is an echo which, according to tradition, is able to repeat an hexameter line requiring 21½ seconds to utter it. The echoes of Killarney, Ireland, are celebrated, and also those of some of the lakes, more especially that of Llyn Idwal. Near this lake there is an echo which repeats the report of a gun sixty times. Dr. Chas. G. Page, in the *Am. Jour. Science*, 1839, mentions a locality in Fairfax co., Va., where three reflections are given, and 13 syllables can be distinguished. The same article mentions an echo observed between two barns at Belvidere, Alleghany co., N. Y., which repeats a word of 3 syllables distinctly 11 times. In an ellipse every sound proceeding from one focus, and impinging against the curve, is reflected to the other focus; whence two persons placed in the foci of an elliptical chamber may converse with each other in a whisper, and their voices not be heard by those who are in the other parts of the room.

To reverberate or send back, as sound.

"The echoed woes from distant rocks resound"—Prior.

To respond woeingly; to repeat, as adoption.

"Separatists do but echo the same note."—Decay of Piety

[Gr. *ēchōō*.] To peal; to resound; to reflect sound; to sound back.

"Her mitted voices hear the echoing noise."—Blackmore.

Canon, in Utah, a gorge of striking grandeur and beauty, in Summit co., 975 m. from Omaha, and visible from the Union Pacific R.R.

less (ek'o-less), *a.* Without echo or response.

ols, in Georgia, a S. co., bordering on Florida. Area, 400 sq. m. Rivers. Allapaha river. Surface, level; sandy. Cap. Statenville. Pop. (1890) 3,079.

m'eter, *n.* [Fr. *échomètre*.] (*Mus.*) A sort of scale or line, marked with lines which serve to measure the intervals of sounds, and to ascertain their intervals and

m'etry, *n.* [Fr. *échométrie*.] Act, art, or practice of measuring the duration of sounds.—Art of constructing m'etry, &c., in a manner to produce echoes.

Seville, a city of Spain, prov. of Seville, on the Zenil, 17 E.N.E. of Seville. *Munif.* Coarse cloth, serges, coats, friezes, and linen. Pop. abt. 30,000.

Eck'ermann, JOHANN PETER, a German author, B. at Wismen, 1792. He is chiefly known through his intercourse with Goethe. After the death of the patriarch of German literature, E. published his *Gespräche mit Goethe* (Conversations with Goethe), which have been translated into all European languages. D. 1854.

Eck'ernförde, a town of Denmark, on an inlet in the Baltic, 10 m. from Schleswig; pop. 4,962.

Eck'ford, in Michigan, a post-township of Calhoun county, about 45 miles South by West of Lausling. Pop. (1897) about 1,150.

Eck'ley, in Ohio, a former P. O. of Carroll co.

Eck'ley, in Pennsylvania, a post-village of Luzerne co., about 12 m. N.W. of Mauch Chunk.

Eck'mansville, in Ohio, a post-village of Adams co., abt. 16 m. N. of the Ohio River.

Eckmühl, (ek'mool,) a town of Bavaria, 13 miles from Ratisbon, celebrated for being the scene where the Austrians were defeated by the French in 1809. Davoust showed great bravery in this action, and was named by Napoleon Prince of Eckmühl.

Eck'ing Choo, a river of Thibet, is supposed to be the head-stream of the Indus. It rises on the N. side of the Himalaya, near the sources of the Sutlej. The actual locality of its sources has been assigned to the Kailas Mountains, in Lat. 31° 25' N., and Lon. 81° 40' E. Flowing to the N.W., E. C. reaches Lon. 79° E. before it assumes the name of Indus.

Eclaircissement, (-ek-lar'sis-mong,) *n.* [Fr.] An explaining or act of clearing anything that is obscure or mysterious.

Eclaircize, (-ek-lar'siz,) *v. a.* [Fr. *éclaircir*.] To make clear; to render lucid; to explain that which is obscure, vague, or mysterious.

Eclampsy, *n.* [Lat. *eclampsia*, from Gr. *eklampō*, to shine.] (*Med.*) A splendor, brightness, effulgence, flashing of light, scintillation. It is a flashing light, as those sparklike lights which strike the eyes of epileptic patients, or that very formidable of convulsions to which women are subject in cases of severe labor, or as a consequence of excessive flooding after delivery. At whatever stage it arrives, or whether the result of irritation or exhaustion, E. is always a most alarming condition.

Eclat, (-ek-lā') *n.* [Fr.: O. Fr. *esclater*, to break forth; from Gr. *klaō*, to break off in pieces.] A bursting forth, as of light; show; splendor; pomp; renown; as, the "eclat of Homer's battles."—Pope.

—A burst of applause; acclamation; approbation; as, his speech was received with *eclat*.

Eclectic, (-ek-lek'tic,) *a.* [Gr. *eklektikos*—*ek* or *ex*, and *legō*, to choose.] Selecting; choosing; relating to the Eclectics, certain philosophers of antiquity.

"Cicero was of the eclectic sect."—Watts.

n. (Phil.) One of those philosophers who, without attaching themselves to any particular system, or forming one of their own, professed to select from the various existing systems what they believed to be true, and thus to construct a new and complete whole. The name originated with the Alexandrian philosophers, or Neoplatonists, who professed to gather and unite into one body whatever was true in all the systems of philosophy. The chief representatives of this school are Plotinus, Porphyry, Iamblichus, Proclus, and Clemens Alexandrinus. Modern eclecticism is considered to have taken its rise in the 17th century with Bacon and Des Cartes; but it has in this century received a fresh impetus through the labors of the German philosopher Hegel, and of Victor Cousin, perhaps the most able and ingenious thinker of modern France.

Eclectically, *adv.* By way of choosing or selecting; in the manner of the eclectic philosophers.

Eclecticism, *n.* [Fr. *éclectisme*.] The art or practice of selecting from different systems; the doctrine of the Eclectics.

Ecligm, (-ek-līm') *n.* [Lat. *écligma*.] (*Med.*) A medicine made by the incorporation of oils with syrups, and which is to be taken upon a liquorice stick.

Eclipsa'reon, *n.* An apparatus for illustrating and demonstrating the phenomenon of solar eclipses.

Eclipse, *n.* [Fr. *éclipse*; Gr. *ekleipsis*, from *ekleipo*, I faint away or disappear.] (*Astron.*) The entire or partial obscuration of a heavenly body. Eclipses may be divided into two kinds, according to the circumstances under which they occur:—1. When the obscuration is caused by an interception of the light received by the body from the sun; as in the cases of E. of the moon, E. of Jupiter's satellites, &c. 2. When the obscuration is caused by an interception, either totally or partially, of the light transmitted from the luminary to the spectator; this latter class embraces E. of the sun, occultations of stars and planets by the moon, the transits of Mercury and Venus over the disc of the sun, and of the satellites of Jupiter and Saturn over the discs of those planets. The eclipses of Jupiter's moons, which can be calculated long beforehand, afford an extremely convenient method of determining longitude. The earth and moon cast their shadows in directions opposite to the sun. As the sun is larger than either the moon or the earth, and they are nearly spherical in shape, their shadows must be very nearly conical in form. The moon is eclipsed when it passes into the shadow of the earth (Fig. 904). If only a part of the moon's disc enters the earth's shadow, the obscuration is, of course, only partial, and is called a *partial eclipse*; but if the whole disc enters the earth's shadow, the obscuration is complete, and is called a *total eclipse*. E. of the moon can take place only at full moon, that is, when the moon is in opposition to the sun. The sun is eclipsed when the earth passes into the shadow of the moon. When the dark disc of the moon entirely covers the sun, the eclipse is *total*; when only a portion or one

side of the sun is covered by the moon, the eclipse is *partial*; and when the disc of the moon does not cover the whole disc of the sun, but leaves a luminous ring around its own body, the eclipse is *annular*. The cone of pure shade of the earth or the moon is called the *umbra*; those portions of space which receive light only from a part of the sun, one side of which is obscured by the disc of the opaque body, are called the *penumbra*. Owing to the varying distance of the moon from the earth, her *umbra* sometimes reaches the earth, and sometimes does not. In the former case, there is a total E. of the sun to all parts of the earth within it, and a partial E. to all parts within the penumbra. In the latter case there will be an annular eclipse in those places which are in the direction of the axis of the cone, and a partial eclipse to those which are only within the penumbra.—E. of the sun can take place only when the moon is *new*, or in conjunction. "By reference to Fig. 904, the phenomena of E. can be readily understood. S represents the sun, E the earth, and M the moon, when in conjunction or *new*, and causing an E. of the sun. M', the moon, in opposition or *full*, and being herself eclipsed. In all other positions of the moon, M''M'', her cone of shade is projected into space away from the earth and the sun, while the other halves are in the shade. The illuminating body is itself a sphere of much greater size. Not only, therefore, have the earth and the moon always one of their hemispheres dark, but each of these bodies throws behind it, in a direction opposite from the sun, a shadow of conical form, the length and diameter of which depend upon the distance and diameter of the illuminating body, and the diameter of the illuminated body." Rolfe & Gillet.—The breadth of the moon's umbra at the distance of the earth is about 160 miles. It is only within this narrow tract that a total eclipse of the sun can be seen; but owing to the rotation of the earth, this tract has considerable length. The great solar eclipse of Aug., 1869, became total first upon the earth in Siberia at sunrise, was total at Alaska at noon, and thence the line of total eclipse ran southeasterly, through British America, Minnesota, Iowa, Illinois, Kentucky, and North Carolina, and ending in the ocean at sunset. The orbit of the moon is inclined to that of the earth about 5°. This is the reason why eclipses do not occur during every lunar revolution. In the course of a year there may be three eclipses of the moon, and four of the sun, which are the greatest numbers that can happen to each respectively; but there must always, necessarily, be two of the sun and two of the moon. In describing an E. it is usual to divide the diameter of the body into twelve *digits*; and the E. is said to be so many digits according to the proportion of the diameter which is obscured. E. of the sun and moon were generally regarded by the ancients as omens of some terrible public calamity that was about to happen; and although the theory of E. is said to have been known to the Chinese about 150 B. C., yet to this day the lower orders in China imagine that these phenomena are caused by the attempts of a dragon to devour the sun and moon, and they assemble with drums and other instruments, believing that with the noise they may prevent him from accomplishing his object. The first E. that is placed on record is one of the moon, observed at Babylon 721 B. C. Thales showed the true cause of lunar E. about 600 B. C.; but Calippus was the first who calculated their occurrence about 275 years later. Among the most remarkable E. of the sun that are recorded in history may be mentioned those of 1191 and 1715, when the darkness was so great that the birds went to roost, and flowers closed their petals as at nightfall, and the stars shone brightly at midday; which assertions, however, must be taken with some allowance.

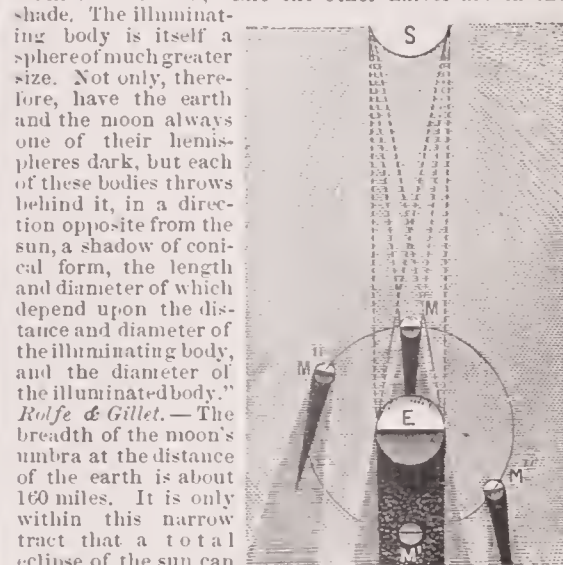

Fig. 904.

side of the sun is covered by the moon, the eclipse is *partial*; and when the disc of the moon does not cover the whole disc of the sun, but leaves a luminous ring around its own body, the eclipse is *annular*. The cone of pure shade of the earth or the moon is called the *umbra*; those portions of space which receive light only from a part of the sun, one side of which is obscured by the disc of the opaque body, are called the *penumbra*. Owing to the varying distance of the moon from the earth, her *umbra* sometimes reaches the earth, and sometimes does not. In the former case, there is a total E. of the sun to all parts of the earth within it, and a partial E. to all parts within the penumbra. In the latter case there will be an annular eclipse in those places which are in the direction of the axis of the cone, and a partial eclipse to those which are only within the penumbra.—E. of the sun can take place only when the moon is *new*, or in conjunction. "By reference to Fig. 904, the phenomena of E. can be readily understood. S represents the sun, E the earth, and M the moon, when in conjunction or *new*, and causing an E. of the sun. M', the moon, in opposition or *full*, and being herself eclipsed. In all other positions of the moon, M''M'', her cone of shade is projected into space away from the earth and the sun, while the other halves are in the shade. The illuminating body is itself a sphere of much greater size. Not only, therefore, have the earth and the moon always one of their hemispheres dark, but each of these bodies throws behind it, in a direction opposite from the sun, a shadow of conical form, the length and diameter of which depend upon the distance and diameter of the illuminating body, and the diameter of the illuminated body." Rolfe & Gillet.—The breadth of the moon's umbra at the distance of the earth is about 160 miles. It is only within this narrow tract that a total eclipse of the sun can be seen; but owing to the rotation of the earth, this tract has considerable length. The great solar eclipse of Aug., 1869, became total first upon the earth in Siberia at sunrise, was total at Alaska at noon, and thence the line of total eclipse ran southeasterly, through British America, Minnesota, Iowa, Illinois, Kentucky, and North Carolina, and ending in the ocean at sunset. The orbit of the moon is inclined to that of the earth about 5°. This is the reason why eclipses do not occur during every lunar revolution. In the course of a year there may be three eclipses of the moon, and four of the sun, which are the greatest numbers that can happen to each respectively; but there must always, necessarily, be two of the sun and two of the moon. In describing an E. it is usual to divide the diameter of the body into twelve *digits*; and the E. is said to be so many digits according to the proportion of the diameter which is obscured. E. of the sun and moon were generally regarded by the ancients as omens of some terrible public calamity that was about to happen; and although the theory of E. is said to have been known to the Chinese about 150 B. C., yet to this day the lower orders in China imagine that these phenomena are caused by the attempts of a dragon to devour the sun and moon, and they assemble with drums and other instruments, believing that with the noise they may prevent him from accomplishing his object. The first E. that is placed on record is one of the moon, observed at Babylon 721 B. C. Thales showed the true cause of lunar E. about 600 B. C.; but Calippus was the first who calculated their occurrence about 275 years later. Among the most remarkable E. of the sun that are recorded in history may be mentioned those of 1191 and 1715, when the darkness was so great that the birds went to roost, and flowers closed their petals as at nightfall, and the stars shone brightly at midday; which assertions, however, must be taken with some allowance.

Eclipse, *v. a.* To darken or hide, as a luminous body, in whole or in part, and intercept its rays; to obscure; to darken by intercepting the rays of light which render luminous.

"Let the eclipsed moon her throne resign."—Sandys.

—To cloud; to darken; to obscure; to veil.

"His death eclipsed the gaiety of nations."—Dr. Johnson.

—*v. n.* To become eclipsed or overshadowed.

Ecliptic, *n.* [Gr. *ekleptikos*, belonging to an eclipse, from *ekleipo*, to fail or be defective.] (*Astron.*) The apparent path of the sun through the heavens. It is called *ecliptic* because eclipses happen only when the moon is in the plane of this great circle, or very near it. The ecliptic is conceived to be divided into twelve equal parts, called *signs*. The signs of the ecliptic—also called parts of the Zodiac—being reckoned from the intersection of the equator and ecliptic, which is not a fixed point, are carried backwards by the precession of the equinoxes through the constellation. The ecliptic is the circle to which longitudes and latitudes in the heavens are referred, as right ascensions and declinations

are referred to the earth's equator. The angle which the plane of the ecliptic makes with the plane of the equator is called the *obliquity of the ecliptic*. It is about $23\frac{1}{2}^\circ$, but from the action of the other planets, especially Jupiter, Mars, and Venus, on the mass of the earth, and from other causes, it is liable to variation. This inclination is at present diminishing, and were it to continue to diminish, the ecliptic and equator would at last coincide, and the earth would have no change of seasons. The decrease has a limit, however, and the inclination oscillates between two definite bounds which it cannot pass.

(*Geog.*) A great circle on the terrestrial globe, answering to, and falling within, the plane of the celestial ecliptic.

—*a.* Pertaining to or described by the ecliptic.

—Relating or pertaining to an eclipse.

Eclougue, (*ek'log*), *n.* [Gr. *eklo-gē*, from *eklegō*—*ek*, and *legō*, to choose.] (*Lit.*) A pastoral poem, in which shepherds are introduced conversing with one another; a bucolic poem; an idyl.

Ecole Polytechnique, (*ai'kolē po-le-tek-neek*), *n.* [Fr. *école*, school; Gr. *polus*, many, *techna*, an art.] (*French Hist.*) In 1794, a school for the education of young men in military, naval, and civil engineering, called the *École Centrale des Travaux Publics*, was established at the Palais Bourbon. In 1795 the name was changed to *École Polytechnique*, and the pupils were required to wear a uniform, and were instructed in artillery; and in 1804 the organization was made more strictly military by Napoleon I. In consequence of the strong political demonstrations of the students, the school was dissolved for a time in 1816, 1830, and 1832. It was reorganized Nov. 1, 1852, and is now called *L'École Polytechnique*.

Econom'ic, **Econom'ical**, *a.* [Fr. *économique*, from Gr. *oiko-nomikos*. See *ECONOMY*.] Pertaining to economy, or to the regulation of household concerns.—Managing domestic or public pecuniary concerns with frugality; saving of waste and needless expense; as, “*economic art*.” (*Davies*).—Not wasteful or extravagant; frugal; careful; sparing; thrifty;—with reference to acts; as, he is *economical* with his money.—Careful in expenditure; guarding against lavishness or waste;—with reference to character, &c.; as, an *economical* system.—Relating or pertaining to the science of economics.

Econom'ically, *adv.* With economy or frugality.

Econom'ies, *n. sing.* The science of domestic management; doctrine of careful arrangement of household affairs.

—The science of *POLITICAL ECONOMY*, *q. v.*

Econ'omist, *n.* [Fr. *économiste*.] One who practises economy; one who manages domestic or other concerns with methodical care and frugality; as, a close *economist*.

—One versed in the doctrine and practice of political economy.

Economiza'tion, *n.* The act of methodizing the use of things to the best advantage.

Economize, *v. a.* [Fr. *économiser*; Gr. *oikonomēō*. See *ECONOMY*.] To use prudently, as money, time, &c.; to expend with methodical frugality; as, to *economize* one's earnings.

—*v. n.* To manage or conduct pecuniary concerns with a view to frugality; to use money prudently, as the means of saving or acquiring property; as, to *economize* towards gaining a competency.

Econ'omy, *n.* [Fr. *économie*; Lat. *œconomia*; Gr. *oikonomia*—*oikos*, a house, and *nomos*, law, rule, from *nēmō*, to deal out, to distribute.] The management, regulation, and government of household or domestic affairs; management of pecuniary concerns, or the expenditure of money; as, they practise a systematic *economy*.

—A frugal and judicious use of money; frugality in the necessary expenditure or laying out of money.

—A system of rules, regulations, ceremonies, or rites; orderly system regulating the distribution and proper uses of properties and parts, &c.; regular operations of nature in the generation, nutrition, or preservation of animals or plants; as, the animal *economy*.—Judicious and frugal management of public affairs; general regulation and disposition of the affairs of a state or nation, or of any department of government; as, political *economy*.

Econ'omy, in *Indiana*, a post-village of Wayne co., on a branch of the Whitewater River, about 14 m. N.W. of Centerville.

Econ'omy, in *Missouri*, a post-office of Macon co.

Econ'omy, in *Pennsylvania*, a post-borough and township of Beaver co., on the Ohio River, about 17 miles N. W. of Pittsburg. Pop. (1897) about 1,100.

Ecorché, (*ai'kor'shai*), *n.* [Fr., from *écortcher*, to skin or flay, from Lat. *corium*, a hide, and *cortex*, bark.] (*Fine Arts*.) The name given to a figure used by artists in the study of anatomy, in which the muscles are exposed to view by the removal of the outer skin. In parts of the figure the upper muscles are also removed, to exhibit those that lie nearer the bone. These figures are made for the use of artists in plaster or *papier mâché*. There are also series of drawings which serve the same purpose, and in which the muscles of the human frame are represented from every point of view.

Ecorse', in *Michigan*, a township of Wayne co., on the Detroit River, about 80 miles east-south-east of Lansing.

Ecossaise', (*ai'ko-sāzē*), *n.* [Fr.] (*Mus.*) A dancing-tune in the Scotch style.

Ecostate, *n.* [From Lat. *costa*, a rib.] (*Bot.*) Applied to leaves which have no central rib or costa.

Ecoute, (*ai'kōt*), *n.* [Fr., a place for listening, from *écouter*, to listen.] (*Mil.*) A name given to small galleries, excavated at regular distances, and going out beneath

and beyond the glacis, towards the lines and batteries of the besiegers. Their purpose is to enable the garrison to hear and estimate the works being carried on by the sappers and miners of the enemy.

Ecphasis, (*ek'fa-sis*), *n.* [Gr. *ekphasis*.] A declaration made in an explicit manner.

Ecphone'ma, *n.* [Gr. *ekphonema*.] (*Rhet.*) A breaking out of the voice with some interjectional particle.

Ec'phonome, *n.* [Gr.] (*Gram.*) A mark indicative of exclamatory effect; thus (!).

Ecphone'sis, *n.* [Gr. *ekphonesis*.] (*Rhet.*) An animated interjectionary exclamation.

Ec'phora, *n.* (*Arch.*) The projection of any member or moulding before the face of the member or moulding next below.

Ecphrac'tic, *a.* [From Gr. *ekphrasso*, to remove obstructions.] (*Med.*) That which has the property of attenuating tough humors, so as to promote their discharge.

—*n.* An attenuating medicine.

Ecphyse'sis, *n.* [Gr.] (*Med.*) A quick breathing.

Ec'physis, *n.* [Gr., from *ekphyo*, to produce.] (*Surg.*) An apophysis or appendix; a process.

Eerhythm'us, *n.* [Gr., from *ek*, from, and *rythmos*, harmony.] (*Med.*) An irregular pulse.

Ec'estasied, *a.* Filled with ecstasy; as, “an *ecstasied* soul.”

Ec'stasy, *n.* [Fr. *extase*; Gr. *ekstasis*, from *existēmi*—*ek*, or *ex*, and *histēmi*, a stand. See *STAND*.] A fixed state; a trance; a state in which the mind is arrested and fixed, or lost; a state in which the functions of the senses are suspended by the contemplation of some extraordinary or supernatural object.—Excessive joy or transport; rapturous delight of the senses.—Enthusiasm; excessive elevation and absorption of the mind.

“Hands that waked to ecstasy the living lyre.”—Gray.

—Loss of mastery over the mental powers; madness; distraction; insanity.

“Now we see that noble and most sovereign reason . . . blasted with ecstasy.”—Shaks.

Ecstat'ic, **Ecstat'ical**, *a.* [Fr. *extatique*; Gr. *ekstatis-kos*.] Causing ecstasy or absorption of the faculties; arresting the mind; suspending the action of the senses.—Exhilarating; rapturous; transporting; ravishing; delightful beyond measure; as, “*ecstatic dreams*.” Pope.

Ecstat'ically, *adv.* In an ecstatic or blissful manner.

Ec'tasis, *n.* [Gr. *ektasis*.] (*Pros.*) The lengthening out of a syllable from short to long.

Ecthlip'sis, *n.* [Gr. *ekthlipsis*.] (*Lat. Pros.*) The elision of the final syllable of a word ending in *m*, when the next word begins with a vowel.

Ecthy'ma, *n.* (*Med.*) A pustule or cutaneous eruption.

Ec'toblast, *n.* [Gr. *ektos*, exterior, and *blastos*, a bud.] (*Anat.*) The membrane of a cell, as distinguished from the membrane of the mesoblast, of the entoblast, and of the entostoblast.

Ec'toderm, *n.* (*Anat.*) The external skin or outer layer.

Ectoderm'ic, *n.* Pertaining to the ectoderm.

Ecto'pia, **Ectopy**, *n.* [Gr. *ek*, out, and *topos*, place.] (*Med.*) Morbid displacement of parts.

Ectozoa, *n.* [Gr. *ectos*, without, *zōos*, living.] (*Zool.*) A term applied by some naturalists to designate animals living upon the external parts of other animals, and distinguished from those which live in the interior, called *Entozoa*. It is a term which merely designates the habitation of the animals, and does not express any affinity amongst the animals included in it.

Ectro'pinnum, *n.* [From Gr. *ektrepo*, to avert.] (*Surg.*) An eversion of the eyelids so that their internal surface is outermost.

Ectrot'ic, *a.* [Gr. *ektrotikos*, from *titresko*, I wound.] Applied to methods of preventing the development or causing the abortion of any disease.

Ectypog'raphy, *n.* [Gr. *ektypos*, done in relief, and *graphein*, to draw.] A system or method of etching in relief.

Ecuador, or **EQUADOR** (*ek-wah-dor'*), republic of South America, so called from its position under the equator, lying between Lat. $1^\circ 23'$ N. and $4^\circ 45'$ S., and between about 73° and 81° E. long. It lies in a wedge-like form between Colombia and Peru, its eastern boundary being Brazil, its western the Pacific ocean, on which it has a seaboard of about 400 miles. Interiorly its limits are not well defined, while territory formerly claimed by it is now held by Colombia and Peru. As thus reduced in area it contains about 120,000 square miles, about two-fifths the area usually assigned to it. In addition it possesses the Galapagos Islands, of about 2,940 sq. miles. The population is slightly over 1,000,000, not including the savage Indians of the Eastern province, estimated at 100,000 to 150,000; the number is really unknown. The principal cities are Quito, the capital, with a population of about 60,000; Guayaquil, the principal port, 40,000; Cuenca, 30,000; Riobamba, 18,000; Latacunga, 15,000, and Ambato, 12,000. The three last named cities have been the seats of earthquakes of great violence.—*Gen. Desc.* *E.* is intersected by the great chain of the Andes, which here throws off three distinct ranges or spurs, of which that lying *E.* is at once the loftiest and has the widest ramifications. The middle range has a mean elevation of from 10,000 to 12,000 feet, and toward the *E.* stretches out into an elevated plateau, with numerous peaks of very high degrees of altitude. Chimborazo, the loftiest summit (save one) on the American continent, rises here to the height of 21,420 ft., above sea-level; while only second to this peak is that of Cotopaxi, attaining an altitude of 19,000 ft., and forming one of the most remarkable volcanoes in the known world. Soil, &c. The soil of *E.*, generally speaking, is sterile, and the climate sickly; but in the table-lands among the mountains the land is of the highest fertility, and the climate temperate and delightful. At Quito perpetual spring

prevails, and rain is almost unknown. *Rivers.* *E.* is watered by the Amazon and its numberless affluents. Streams, of a minor rank, flowing W. into the Pacific, are for the most part mere mountain torrents. *Veget.* The mineral and vegetable wealth of this country, together with its zoological aspect, are so entirely contrasted with those of Colombia (*q. v.*) that any further expatiation here would be needless. Few roads in *E.*, save a few mule-tracks, which, on the table-lands connect some of the principal trading centers.—*&c.* *E.* is a republic, liberal in its constitution, but

Fig. 905.—ERUPTION OF COTOPAXI, 1741.

long continued in a state of anarchy, social convulsions, and revolution, the character and formation of government having, in consequence, suffered various changes. As at present constituted the executive consists of president and vice-president, elected for years, and not eligible for immediate re-election. The term of the vice-president begins in the middle of the presidential term, so that he serves two years with the president, and two years with another president. Congress consists of senate and assembly. There is a constitutional state of five members, chosen for six years, and the power of the president is much restricted. Education is backward, though it shows signs of improvement. The University of Quito, established in 1684, is partially devoted to the education of priests. Several colleges and seminaries exist, and about 2,000 common schools. *E.* possesses a single railroad, 57 miles in length, and something over a thousand miles of telegraph line.—*Religion.* The state religion is the Roman Catholic, but a certain amount of tolerance is extended toward other sects.—*Com.* Foreign trade is mainly with England; the commercial interests with the U. S. are unimportant.—*Exp.*—cacao, Peruvian bark, ivory, &c. Guayaquil is the principal sea-port.—*Hist.* *E.* in former times a part of the empire of the Incas, conquered by Pizarro, and held by Spain until 1822, when a successful revolt took place, leading to independence in 1822, in which year it united with Grenada and Venezuela to form the republic of Colombia, under the presidency of Bolivar. It withdrew from this union in 1831, when Quito, with its associated departments, took the name of the Republic of Ecuador, under the presidency of General Flores, who continued in office until 1845. Since then political squabbles and revolutions have been almost incessant, and few presidents have served a full term. From 1852 to 1859 the relations prevailed with Peru, and in 1863 *E.* was declared by New Grenada; while from 1869 to 1875 civil war prevailed with little intermission. This culminated in 1878 in the formation of a new constitution, the government under which was subservient to priestly influence. In 1883 this government was deposed, and a liberal government substituted. Under its recent presidents, Flores (1883), Condors (1892), and Alfaro (1896), the country has become more peaceful and has made some progress.

Ecumen'ic, **Ecumen'ical**, *a.* [Fr. *œcumenique*, Gr. *oikoumenikos*, of or from the whole world, from *oikos*, a house, and *menē*, the inhabited world, from *oikos*, a house, and *menē*, the inhabited world.] (*Eccles.*) General; universal; œcumenical. **ECUMENICAL COUNCIL.**

Ecure, (*ek'yuri*), *n.* [Fr.] A stable; a covered do for horses.

Ecureuls, (*a-ku-rul'*), a vill. of Canada, Portneuf co., N. B.

Ec'zema, *n.* [Gr. from *eczeo*, I boil or break out.] A disease of the skin, known by an eruption of vesicles, generally very close together; but littleness is at first produced, although irritation of the skin. The heat of a summer sun sometimes produces the eruption, which has then been called *eczema*. Under irritation, *E.* may become partly pustular.

the irritating fluid discharged from the vesicles reddens and inflames the skin, producing great distress. Bakers, grocers, and other persons whose hands come in contact with irritant matters, sometimes suffer severely. One painful form of the disease is *E. rubrum* or *mercuriale*, frequently seen in those who have used mercury freely, though it may also occur without any such especial cause. It affects every part of the body, and sometimes the entire skin becomes diseased. The treatment of *E.* consists in improving the secretions, and supporting the system by good diet and tonics. The irritation of the skin is often greatly relieved by lukewarm baths and mild fomentations.

Edacious, (*-la shus*.) *a.* [Lat. *edax*, *edacis*, from *edo*, to eat, to eat up; Sansk. *ad*. See *EAT*.] Eating; given to eating; voracious; gluttonous; greedy; ravenous.

Edaciously, *adv.* Greedily; with a keen appetite; voraciously.

Edacity, *n.* [Lat. *edacitas*. See *EDACIOUS*.] Greediness; ravenousness; voracity of appetite; rapacity.

"The wolf is a beast of great edacity and digestion."—*Bacon*.

Edam, a town of the Netherlands, 12 m. from Amsterdam, near the Zuyder Zee; *pop.* about 4,530.

Edam, an island near the N. coast of Java, used as a penal settlement by the Dutch.

Edda, (*ed'dä*.) *n.* [NORSE, the mother of poetry.] (*Scand. Myth.*) The ancient collection of Scandinavian poetry in which the national mythology is contained. There are two Eddas; the older is believed to have been reduced to writing, from oral tradition, in Iceland, between A. D. 1050 and 1133. It was recovered and published in Denmark in 1643. The new Edda, supposed to have been composed 200 years after the former, is an abridgment of it, with a new arrangement of its parts. It was translated by Resenius in 1640, and is thence called the Resenian Edda. The authenticity of these monuments of an early age has been doubted in recent times; but the latest researches of critics (the brothers Grimm and others) seem to go far towards establishing it.

Ed'der, *n.* An English provincialism for the *ADDER*, *q. v.*

Ed'dington, in *Maine*, a post-village and township of Penobscot co., on the Penobscot River, about 70 m. N.E. of Augusta.

Eddington, in *Pennsylvania*, a P. O. of Bucks co.

Ed'dish, *n.* [A. S. *edisc*.] The aftermath, after the removal of the first crop.—Stubble of corn or grass.

Ed'dy, *n.* [A. S. *ed*, backward, again, and *ed*, a stream, a river; Dan. *aa*; Icel. *á*, a river, *yda*, a boiling of waters.] A current of water running back, or in a direction contrary to the main stream; the tide on the turn of the ebb.—A whirlpool; a vortex of waters; a current of water or air in a circular direction.

"And smiling eddies dimpled on the main."—*Dryden*.

—*v. n.* To move circularly, or as an eddy.

"Eddying round and round, they sink."—*Wordsworth*.

—*v. a.* To gather together and form, as an eddy.

—*a.* Whirling around; moving in a circular form.

"And chaff with eddy winds is whirled around."—*Dryden*.

Ed'dy, an island of Ireland, in Galway Bay, about 5 m. S.E. of Galway. *Area*, about 95 acres. It contains the ruins of an ancient castle.

Eddy's Creek, in *Kentucky*, joins the Cumberland River in Caldwell co., near Eddyville.

Ed'dystone Rocks, a reef of dangerous rocks in the English Channel, on which is the well-known light-house of that name, 14 miles from Plymouth break-water; Lat. 50° 10' 54" N., Lon. 4° 15' 53" W. It was erected in 1759, and replaced by a new one in 1879, with a lantern 130 ft. above high water. The new *E.* is constructed of granite, of which 4,668 tons were used against but 988 in the old one, and the light is visible 17½ nautical miles. It is located 120 ft. from the old site.

Ed'dytown, in *N. Y.*, a p. v. of Yates co., abt. 190 m. W. of Albany.

Ed'dyville, in *Iowa*, a p. v. of Wapello co., on the Des Moines R.; in *Ky.*, a p. v., cap. of Lyon co., on the Cumberland R., about 15 m. W. of Princeton.

Ed'dyville, in *New York*, a post-village of Cattaraugus co., abt. 300 m. W. of Albany.

A village of Ulster co., on the Rondout Creek, near its entrance into the Hudson River, abt. 55 m. S. of Albany.

Ed'dyville, in *Pennsylvania*, a post-village of Armstrong co., on Mahoning Creek, about 18 m. N.E. of Kittanning.

Ed'elite, *Ed'elith*, *n.* (*Min.*) Same as *PRETINITE*.

Edem'atons, *Edem'atose*, *a.* [Gr. *oiedema*, a tumor.] Pertaining to edema.

eden, *n.* [Heb., the garden of paradise.] (*Script.*) "It would be difficult," says a writer in *Smith's Dictionary of the Bible*, (i. 482,) "in the whole history of opinion,

to find any subject which has so invited, and at the same time so completely baffled, conjecture, as the Garden of Eden. The three continents of the Old World have been subjected to the most rigorous search; from China to the Canary Isles, from the Mountains of the Moon to the coasts of the Baltic, no locality which in the slightest degree corresponded to the description of the first abode of the human race has been left unexamined. The great rivers of Europe, Asia, and Africa, have in turn done service as the Pison and Gihon of Scripture, and there remains nothing but the New World wherein the next adventurous theorist may bewilder himself in the mazes of this most difficult question." Philo Judæus (flourished about 20) first broached the allegorical theory of interpretation, teaching that paradise shadowed forth the governing faculty of the soul, and that the tree of life represented religion, the true means of immortality. Origen (circ. 186—253 or 254), adopting a somewhat similar view, regarded Eden as heaven, the trees as angels, and the rivers as wisdom; and Ambrosius (333 or 340, April 4, 397) considered the terrestrial paradise and the third heaven, mentioned by St. Paul (2 Cor. xii. 2-4), as identical. Luther (Nov. 10, 1483—Feb. 18, 1546) taught that Eden was guarded by angels from discovery and consequent profanation until the Deluge (*q. v.*), when all traces were destroyed. Swedenborg (Jan. 29, 1689—March 29, 1772), who regarded the first 11 chapters of Genesis as constituting a divine allegory, taught that Eden represented the state of innocence in which man was originally created, and from which he degenerated in consequence of the Fall.

Ed'en, in *California*, a thriving township of Alameda co.

Ed'en, in *Georgia*, a village of Bryau co., abt. 50 m. N. of Darien.

—A post-office of Effingham co.

Ed'en, in *Illinois*, a prosperous township of La Salle co.

—A village of Randolph co.

—A post-village of Peoria co.

Ed'en, in *Indiana*, a village of Daviess co., on the W. Fork of White river, about 16 m. E. of Vincennes.

—A post-village of Hancock co., on Sugar creek, about 26 m. E. N. E. of Indianapolis.

—A township of La Grange co.

Ed'en, in *Iowa*, a township of Benton co.

—A township of Clinton co.

—A township of Decatur co.

—A prosperous township of Fayette co., about 10 m. W. N. W. of West Union.

—A township of Marshall co.

Ed'en, in *Kansas*, a post-office of Atchison co.

Ed'en, in *Maine*, a post-town of Hancock co., on Mount Desert Island, about 35 miles S. S. E. of the city of Bangor.

Ed'en, in *Michigan*, a post-office of Ingham co.

Ed'en, in *North Carolina*, a village of Eden co.

Ed'en, in *New York*, a post-town of Erie co., about 16 m. S. of Buffalo.

Ed'en, in *Ohio*, a village of Delaware co., about 28 m. N. of Columbus.

—A township of Licking co.

—A township of Seneca co.

—A village of Trumbull county, about 150 m. N. E. of Columbus.

—A township of Wyandott co.

Ed'en, in *Oregon*, a precinct of Jackson co.

Ed'en, in *Pennsylvania*, a township of Lancaster co.

—A post-office of Bucks co.

Ed'en, in *Vermont*, a post-town and township of Lamoille county, about 30 miles N. of the city of Montpelier.

Ed'en, in *Wisconsin*, a post-township of Foud du Lac co., about 70 m. N. E. of Madison.

Ed'enburg, in *Virginia*, a post-town of Shenandoah county, on Stony Creek, about 5¼ miles S. W. of Woodstock.

Eden Mills, in *Vermont*, a P. O. of Lamoille co.

Eden Prairie, in *Minnesota*, a post-township of Hennepin co., on the Minnesota River, abt. 16 m. W. S. W. of St. Paul.

Eden's Ridge, in *Tennessee*, a P. O. of Sullivan co.

Eden'tata, *n. pl.* [Lat. *edentatus*, from *e*, priv., and *deus*, *dentis*, a tooth.] (*Zoöl.*) An order of quadrupeds, which, although it includes many animals differing from each other widely in habits, and also in certain points of structure, yet agree in so many essential characters, and are connected together by so many intermediate links as to require being associated in the same group. They all agree in the absence of teeth in the front of the jaws; all resemble each other in the great claws which encompass the ends of their toes; and they are all distinguished by a certain slowness, or want of activity, obviously arising from the peculiar organization of their limbs. The armor-clad, insectivorous *Armadillos* (fig. 189), of South America; the tree-inhabiting *Sloths* (fig. 69), and hairy, toothless *Ant-eaters*, of the same continent; the gigantic *Megatherium*, which formerly inhabited it; and the *Mammoth*, whose lizard-like body, defended by an impenetrable coat of mail, excites our wonder,—all belong to the order *EDENTATA*; which constitute the last group of *unguiculated* animals, and are severally described in the course of this work.

Ed'enton, in *Kentucky*, a P. O. of Madison co.

Edenton, in *N. Carolina*, a post-town, port of entry, and the cap. of Chowan co., at the Edenton Bay, which opens into Albemarle Sound abt. 150 m. E. of the city of Raleigh.

Edenton, in *New York*, a P. O. of St. Lawrence co.

Edenton, in *Ohio*, a post-village of Clermont co., abt. 30 m. E. N. E. of Cincinnati.

Eden'tulous, *a.* [Lat. *e*, priv., and *deus*, *dentis*, a tooth.] Toothless.

Eden Valley, in *New York*, a post-office of Erie co.

Eden Village, in *Penn.*, a village of Lancaster co.

Ed'enville, in *Iowa*, a village of Marshall co.

Edenville, in *Michigan*, a post-office of Midland co.

Edenville, in *New York*, a post-village of Orange co., about 119 m. S. by W. of Albany.

Edenville, in *Penn.*, a post-office of Franklin co.

Ed'es Falls, in *Maine*, a post-office of Cumberland co.

Edes'sa, in Mesopotamia. See *ÆDESSA*.

Ed'ford, in *Illinois*, a thriving township of Henry co.

Edfm, or **Edfoa**, (*ed'foo*.) (anc. *Atbo* of the Egyptians, and *Apollonopolis Magna* of the Romans,) a village of mud-huts on the W. bank of the Nile, in Upper Egypt, 52 m. S. by E. of Thebes; Lat. 24° 58' 43" N., Lon. 32° 54' E. It is scattered amidst and around the ruins of two temples considered to be the finest remains of antiquities in Egypt. *Manuf.* Earthenware and blue cotton cloth. *Pop.* abt. 2,000.

Ed'gar, king of England, was the younger of the two sons of Edmund I. During the reign of his brother Edwy he was chosen king of Mercia and Northumbria, and succeeded Edwy in 958. He recalled Dunstan, made him bishop of Worcester, of London, and, on the death of Odo, archbishop of Canterbury, gave himself up to his direction. The reign of Edgar was peaceful, the Northmen making no descents on England, perhaps in consequence of the large fleet kept up by the king. Monasteries were restored, and many new ones built; the married clergy expelled, and church power raised to a higher point than before, which made Edgar a favorite, and got him a good name with monkish historians. His character was nevertheless feeble, selfish, and sensual. Edgar was not crowned till 973, and the same year took place the stately ceremonial on the Dec. when six or eight subject kings attended him. Edgar is said to have imposed on the Welsh an annual tribute of 300 wolves' heads, instead of a money tax. D. 975. He left two sons, Edward and Ethelred, who both succeeded to the crown.

Edgar, the 87th king of Scotland, was son of Malcolm III., by the sister of Edgar Atheling of England. D. 1107.

Edgar Atheling, called also *EDWARD THE OUTLAW*, an Anglo-Saxon prince, grandson of Edmund Ironsides. He was probably born in Hungary, and in 1057 followed his father to England, at whose death he became heir to the throne. After the battle of Hastings, and death of Harold, he was proclaimed king, but was too feeble to maintain his position, and soon submitted to William the Conqueror. Date of death unknown.

Edgar, in *Illinois*, an E. co., bordering on Indiana; *area*, abt. 600 sq. m. *Rivers*, Little Embarras River, and Brulette and Clear creeks. *Surface*, generally level; *soil*, fertile. *Pop.* (1890) 26,787. *Cap.* Paris.

—A township of Edgar co.

Ed'gard, in *Louisiana*, a P. O. of St. John Baptist parish.

Edgar Springs, in *Missouri*, a P. O. of Phelps co.

Edgartown, in *Massachusetts*, a post-town and township, port of entry, and seat of justice of Dukes co., on the S. E. part of Martha's Vineyard, abt. 75 m. S. by E. of Boston. The harbor is one of the safest in the world, and averages 4½ fathoms in depth. At its entrance is a fixed light, 50 feet above sea-level, Lat. 41° 25' N., Lon. 70° 27' W.

Edge, (*ej*.) *n.* [A. S. *ecg*; Ger. *ecke*; Dan. *eg*; W. *awch*; Gr. *akē*, a point, an edge; root *ac*, sharp; Sansk. *asi*, the point of a sword.] The extreme border, rim, or point of anything; brink; brim; margin; border; as, the *edge* of a precipice, the *edge* of a table, the *edge* of a book, &c.

"Truth stands trembling on the edge of law."—*Pope*.

—The sharp border, or thin cutting extremity, or side of an instrument; that which cuts, penetrates, wounds, or injures; as, the *edge* of a knife, the *edge* of a sarcasm, &c.

"Slanderer's edge is sharper than the sword."—*Shaks*.

—A narrow part rising from a broader; commencement or early part.

"Some harrow their ground over, and then plough it upon an edge."—*Mortimer*.

—Sharpness of mind or appetite; keenness; intenseness of desire; fitness for action or co-operation; sharpness or acrimony.

"Cloy the hungry edge of appetite."—*Shaks*.

—*v. a.* [A. S. *eggian*, to egg, to incite.] To bring to an edge; to furnish with an edge; to sharpen; to give sharpness to; as, to *edge* a razor.

"It made my sword, though *edg'd* with flint, rebound."—*Dryden*.

—To border; to skirt; to fringe; to furnish with an ornamental margin; as, to *edge* a garden-plot.

"Hills, whose tops were *edged* with groves."—*Dryden*.

—To make sharp; to exasperate; to embitter; to incite; to provoke; to urge on; to instigate; to goad.

"By such reasonings the simple were blinded, and the malicious *edged*."—*Haywood*.

—To move, as with the edge turned forward; to move sideways; to move by little and little; as, "*edging* by degrees their chairs forwards."—*Locke*.

To set the teeth on edge, to cause a tingling uneasiness in the teeth by the taste or proximity of some repellent or obnoxious substance, or object.

"A harsh grating tune setteth the teeth on edge."—*Bacon*.

—*v. n.* To move sideways; to move gradually.

(*Naut.*) To sail close-hauled.

To *edge away*. (*Naut.*) To increase, by degrees, the distance between a ship and the land, or between it and another vessel. — To *edge in with*. (*Naut.*) To close in with a coast or vessel, by degrees.

Fig. 906.

OLD EDDYSTONE LIGHT-HOUSE.

Edge'-bone (sometimes written *itch-bone*), *n.* A portion of the rump of dressed beef, presented edgewise to view.

Edge'-comb, in *Maine*, a post-township of Lincoln co. on a peninsula extending into the Atlantic Ocean, about 30 m. S. by E. of Augusta.

Edge'-comb, in *N. Carolina*, a N. E. co.; area, 520 sq. m. Rivers, Tar river, and Fishing, Sandy, and Contenting creeks. Surface, generally level; soil, fertile. Cap. Tarborough. Pop. (1890) 24,113.

Edge'-cumbe Bay, an inlet in the Pacific Ocean, in E. Australia, Lat. 20° S., Lon. 147° 30' E.

Edge'-field, in *S. Carolina*, a W. co.; area, 775 sq. m. Rivers, Savannah, Saluda, Edisto, and Little Saluda rivers. Surface, hilly; soil, fertile. Cap. Edgefield Court-House. Pop. (1890) 49,259.

Edgefield, or **EDGEFIELD COURT-HOUSE**, in *S. Carolina*, a post-town, cap. of Edgefield co., 50 m. W. by S. of Columbia. Pop. (1897) about 1,260.

Edge'-field, in *Tennessee*, a post-village of Davidson co., on the Cumberland river, opposite the city of Nashville.

Edge'-hill, an elevated ridge in England, co. Warwick, 7 m. N. W. of Banbury, where the first battle between Charles I. and the Parliamentary Army was fought. It proved very disastrous to both armies, though the losses were so nearly equal that neither could claim a decisive victory.

Edge Hill, in *Virginia*, a P. O. of King George co.

Edge'-less, *a.* Blunt; obtuse; having no edge; and hence, unable to cut; as, *edgeless* weapons.

Edge'-play, *n.* A fencing-bout with swords.

Edge'-rail, *n.* A rail set edgewise.

Ed'-gerton, in *Ohio*, a post-village of Williams co., about 64 m. W. by S. of Toledo.

Ed'-gerton, in *Wisconsin*, a city of Rock co., on C. & M. & St. P. R. R., 25 m. S. E. of Madison. In the center of an important tobacco-raising district, of which product large quantities are shipped. Pop. (1897) about 2,100.

Edge'-tool, *n.* A tool or instrument possessing a sharp edge; also used figuratively.

"There must be no jesting with *edge-tools*.—*L'Estrange*."

Edgewise (*ē-wīz*), *adv.* With the edge turned forward, or toward a particular point; in the direction of the edge; sideways; with the side foremost.

Edge'-wood, in *Illinois*, a post-town of Effingham co.

Edge'-wood, in *Maryland*, a post-office of Harford co.

Edge'-worth, in *Penna.*, a former P. O. of Bucks co.

Edge'-worth, MARIA, a celebrated Irish novelist, born in Berkshire, 1766. She was the daughter of Richard Lovell E., an author of some merit, and was greatly assisted by him in her early literary efforts. The famous *Essay on Irish Bulls*, the joint production of herself and her father, was published in 1801. Her *Castle Rackrent* abounds in admirable sketches of Irish life and manners, for which most of her tales and novels are distinguished. In 1804 she published her *Popular Tales*, 3 vols.; and two years afterwards, *Leonora*, a novel in 2 vols. In 1809 she issued 3 vols. of *Tales of Fashionable Life*, of a more powerful and varied cast than any of her previous productions. Three other vols. of *Fashionable Tales* appeared in 1812, and fully sustained the high reputation which she had attained. In 1814 her novel of *Patronage*, in 4 vols., was published. Its object is to show the miseries resulting from a dependence on the great, and she paints the manners and characters of high life with her usual vigor and fidelity. In 1817 appeared two tales, named *Harrington* and *Ormond*. In 1822, Miss Edgeworth published a work of a different kind, namely, *Rosamond*, a sequel to *Early Lessons*, which had been previously published, being tales for the young. In 1825 she issued 4 vols. of similar tales, under the title of *Harriet and Lucy*, being a continuation of that course of moral instruction for youthful readers on which she had so successfully entered, and in which she had so few equals. Miss Edgeworth's last work of fiction, a novel entitled *Helen*, in 3 vols., appeared in 1834. It is not inferior to any of her other works. Besides those already mentioned, she also wrote *The Modern Gracilda*, *Frank*, *Garry Owen*, *Laurent le Paresseux*, *Little Plays*

Fig. 907. — EDGEWORTH'S-TOWN.

for *Young People*, *Moral Tales*, *Parents' Assistant*, *Patronage*, and *Comic Dramas*, &c. Sir Walter Scott, with whom she lived in the closest friendship, has acknowledged that to her descriptions of Irish character and manners we are indebted, in a great measure, for the "Waverley Novels." "The rich humour, pathetic tenderness and admirable tact" of her Irish delineations, he declared, led him first to think that something might be attempted for his own country of the same kind. In private life, Miss Edgeworth was highly beloved and re-

spected by all who knew her; and in her intercourse with society she was most unaffected and agreeable. But she had long ceased to take an active part in life, or in the world of literature of which she was once so bright an ornament, her last years being passed in tranquillity at the family seat at Edgeworth's-town. D. 1849.

Edge'-worth, in *Tennessee*, a post-village of Sullivan co., abt. 16 m. N. of Jonesborough.

Edge'-worth's-town, a parish of Ireland, in Leinster co., and abt. 7 m. E.S.E. of Longford. It was the residence of Miss Maria Edgeworth, *q. v.*

Edg'-ing, *n.* That which is added on the edge or border, or which forms the edge; a border; a fringe; a trimming; as, the *edging* to a cap, *edging* of a garden-bed, &c.

Edg'-ing-machine, *n.* An instrument used for making edges.

Edg'-mont, in *Pennsylvania*, a post-township of Delaware co., abt. 10 m. from Chester; pop. abt. 800.

Edgy, *a.* Easily set on edge; quick; sharp; as, a woman's *edgy* temper.—Angular; presenting sharply defined outlines; as, an *edgy* pediment.

Edibility, *n.* Suitability for eating; edibleness.

Edible, *a.* [From Lat. *edo*, to eat. See *EAT*.] Eatable; fit for to be eaten, as food; esculent;—opposed to *potable*; as, *edible* roots.

"The *edible* creation decks the board."—*Prior*.

Ed'-ibleness, *n.* Edibility; state of being edible or eatable.

Edict, *n.* [Lat. *edictum*, from *edico*; *e*, ex, and *dico*, *dic-tum*, to speak.] (*Hist.*) An instrument signed and sealed to serve as a law.—In ancient Rome the name was given to the ordinances of the magistrates, but especially of the two prætors, *prætor urbanus* and *prætor peregrinus*, who on their accession to office published *edicts* or rules for regulating the practice of their courts, as well as for their own guidance in the decision of doubtful cases. Under the emperor Hadrian, a digest of the best decisions of the prætors from the earliest times was made by Sylvius Julianus, collected into a volume called *Edictum Perpetuum*, or Perpetual Edict, ratified by the emperor and senate, and fixed as the invariable standard of civil jurisprudence. (Gibbon's *Roman Empire*, ch. xlv.)—The *Edict of Milan* was a proclamation issued by Constantine after the conquest of Italy (A. D. 313), to secure to the Christians the restitution of their civil and religious rights, of which they had long been deprived, and to establish throughout his extended dominions the principles of a wise and enlightened toleration.—The most famous edict of modern history is the Edict of Nantes, issued by Henry IV. in 1598, to secure to the Protestants the free exercise of their religion. This act, after continuing in force for nearly a century, was repealed by Louis XIV.; and, as is well known, its revocation led to a renewal of the persecutions against the Protestants. The depopulation caused by the sword was also increased by emigration. Above half a million of her most useful and industrious subjects deserted France, and exported, together with immense sums of money, those arts and manufactures which had chiefly tended to enrich the kingdom.

Edictal, *a.* Relating or pertaining to an edict or edicts.

Edificant, *a.* [Lat. from *edificare*.] Constructing; erecting; building.

Edification, *n.* [Lat. *edificatio*. See *EDIFY*.] A building up, in a moral or religious sense; instruction; improvement and progress of the mind, in knowledge, in morals, or in faith and holiness; improvement of the mind in any species of useful knowledge.

Edifice, (*ed-i-fis*), *n.* [Fr. from Lat. *edificium*. See *EDIFY*.] A fabric; but appropriately a large or splendid building.

"God built an *edifice* too large for man to fill."—*Milton*.

Edificial, (*ed-i-fish'al*), *a.* Pertaining to edifices, or to structures.

Edifier, *n.* One who instructs or improves another.

Edify, *v. a.* [Fr. *edifier*, from Lat. *edifico*—*ædes*, a building, and *facio*, to make.] To build up, in a moral sense; to instruct and improve the mind in knowledge generally, and particularly in moral and religious knowledge, as faith, holiness, &c.; as, an *edifying* conversation.

—*v. n.* To be built up, in a moral or religious sense; to be instructed or improved; to become wiser or better.

Edifyingly, *adv.* In an edifying manner.

Edifyingness, *n.* Quality of being edifying.

Edile, *n.* See *EDILE*.

Edin, in *Ohio*, a village of Delaware co., abt. 30 m. N. of Columbus.

Edi'-na, in *Missouri*, a post-village and township, cap. of Knox co., on the South Fabius river, 125 m. N. of Jefferson city. Pop. (1897) about 1,650.

Edinborough, in *North Carolina*, a former post-office of Montgomery co.

Edinborough, in *Pennsylvania*, a post-borough of Erie co., on Connettee creek, 20 m. S. of Erie. Pop. (1897) about 1,350.

Edinburgh, the capital of Scotland, situated 357 m. N.N.W. from London, and 2 miles S. from the Frith of Forth; Lat. 55° 57' 24" N., Lon. 3° 11' W. It stands on high, uneven ground, being built on three ridges running E. and W. The central ridge, on which the city was originally built, terminates abruptly, on the W., in a precipitous rock nearly 400 feet above the level of the sea, on which is the castle, (Fig. 908.) while to the E. it inclines to a plain or valley. On the rising ground to the N. of this valley stands the new town of E. In the old town, covering both sides of the central ridge, the buildings are crowded together in the closest array. The new town is built on the lower and northernmost of

the ridges, and is connected with the old town by the North Bridge and the Earthen Mound. Its streets and squares are of great beauty and regularity. E. is connected with the Calton Hill and Prince's Street by a elegant bridge, called Waterloo Bridge, and with Leith by a broad and fine road, called Leith Walk. The scenery around the city is very fine, and much has been done by art to develop its natural advantages. The Castle is the most remarkable of its public buildings. The date of its foundation is unknown. Queen Margaret widow of Malcolm Caenmore, died in this fortress in 1093; and James VI. of Scotland, afterward James I. of England, was born in it in 1556. At the opposite or extremity of the old town stands the palace and abbey of Holyrood, *q. v.* Of the churches, the metropolitical church, dedicated to St. Giles, the tutelary saint of the

Fig. 908. — CASTLE OF EDINBURGH.

city, is the most ancient. It was erected into a collegiate church in 1466, but is said to have been founded nearly 600 years before. It was in old Greyfriars' church in 1638, that the Solemn League and Covenant was first signed, and subscribed in 1643, in St. Giles' church, by the English commissioners, the commission of the Church and the committee of estates of Parliament. The other churches are Trinity College Church, founded by Margaret of Guelderland in 1462; the Old and New Greyfriars the Tron, the Canongate, St. Cuthbert's, Lady Yester, St. Andrew's, and St. George's; and a number of other churches, chapels, and places of worship for the various sects and denominations of which the inhabitants consist. The university of Edinburgh has long since attained to general celebrity. It was originally founded in the year 1582. Besides the High School, there are other educational establishments, affording every facility to the highest class of instruction that can anywhere be obtained, in almost every department of knowledge. Among these may be named the Edinburgh Academy, the Scottish Naval and Military Academy, and the Royal Scottish Academy of Painting, Sculpture, and Architecture. Of literary associations, the principal is the Royal Society, instituted in 1782; the Royal Society of Antiquaries, the Wernerian Society, and the Astronomical Institution, for the purpose of promoting the science of astronomy, with an observatory on the Calton Hill; the Highland Society, established for advancing the interests of agriculture, manufactures, and arts in the Highlands of Scotland; the Faculty of Advocates, and the Royal Colleges of Physicians and Surgeons. The principal charitable institutions are Heriot's Hospital, and W. sou's Hospital. The prison and Bridewell stand on the Calton Hill, on the top of which is Nelson's monument and near to it other monuments to Dugald Stewart Playfair, and Burns. That of Sir Walter Scott is in Prince's Street, and is a very striking object. The places of public amusement are the theatre and the Assembly Rooms.—*Manuf.* Unimportant, and chiefly confined to the requirements of the citizens. The principal are household furniture, carriages, engraving, all its branches, musical instruments, glass, linen, silks, saracenets, and fine shawl-weaving. The trade of book-selling and printing is carried on to a great extent; a various periodical and other works of high celebrity published. Among these may be mentioned the *Edinburgh Review* (the first number of which appeared in 1802), and *Blackwood's Magazine*. E. was founded, the 7th century, and was described as a considerable village in the 8th. Pop. (1891) 261,260.

Edinburgh, in *Indiana*, a post-town of Johnson co. on Blue river, 10 m. N. of Columbus; on P., C., & St. L. R. R. Has considerable manufacturing interests and a good local trade. Pop. (1897) about 2,650.

Edinburgh, in *Maine*, a township of Penobscot co. about 25 m. N. E. of Augusta.

Edinburgh, in *Michigan*, a former P. O. of Hillsdale county.

Edinburgh, in *Mississippi*, a post-village of Leake co., about 76 m. N. E. of Jackson.

Edinburgh, in *Missouri*, a post-town of Grundy co.—A village of Scotland co., about 140 m. N. of Jefferson City.

Edinburgh, in *New Jersey*, a post-village of Mercer co., about 9 m. E. N. E. of Trenton.

Edinburgh, in *North Dakota*, a post-village of Walworth co., 22 m. W. by N. of Grafton.

Edinburgh, in *New York*, a post-town of Saratoga co., about 45 m. N. N. W. of Albany.

Edinburgh, in *Ohio*, a post-town and township of Portage co., about 140 m. N. E. of Columbus.

—A village of Wayne co., about 80 m. N. E. of Columbus.

Edinburgh, in *Texas*, a village and port of entry of Cameron co., on the Rio Grande.

—A post-village, cap. of Hidalgo co., on the Rio Grande, about 60 m. above Brownsville.

Edinburghshire, or **Midlothian**, a county of Scotland, having on the N. the Frith of Forth and the river Almond; E. the co. of Haddington; S. the cos. of Lanark, Peebles, and Berwick; and on the W. corner a part of the co. of Linlithgow. *Area*, 358 sq. m. *Surface*, pleasing, fertile, and highly cultivated, but intersected by the Moorfoot and Pentland hills. The Lothian farms are among the best in the world. *Rivers*, small; the chief are the Esk, the Almond, the Water of Leith, and the Tyne. *Prod.* Wheat, barley, and general crops. *Min.* Coal, iron, sandstone, and limestone. *Cap.* Edinburgh. *Pop.* (1897) 451,450.

Edington, in *Illinois*, a post-office and township of Rock Island co.

Edisto River, in S. C., formed by the union of the N. and S. Edisto, flowing S.E., enters the Atlantic Ocean.

edit, *v. a.* [Lat. *edo*, *edum*—*e*, *ex*, and *do*, to give.] To superintend a publication; to prepare a book, treatise, or newspaper for publication; to conduct or manage, as a periodical or literary publication.

edition (*ē-dish'on*), *n.* [Fr., from Lat. *editio*.] Properly, the indefinite number of copies of a book printed at one time. In bibliographical works, *editio princeps* signifies the earliest printed edition of an author; *editio optima*, the last edition, which is generally regarded as the best, &c.

editor (*ed'it-ēr*), *n.* [Fr. *éditeur*.] One who superintends, revises, corrects, and prepares a book for publication; one who supervises the publication of a newspaper, a magazine, or other periodical.

editorial, *a.* Pertaining to an editor; as, *editorial labor*.—Written by an editor; as, an *editorial article*.

n. A leading article from an editor in a newspaper or magazine; as, a spicy *editorial*.

editorially, *adv.* In the manner or style of an editor.

editorship, *n.* The business or avocation of an editor; as, the wear and tear of *editorship*.

Edmeston, in *New York*, a post-village and township of Otsego co., about 18 m. W. of Cooperstown.

Edmondson, in *Kentucky*, a S.W. central co.; *area*, about 225 sq. m. *Rivers*, Greene River, and Bear and Nolin creeks. *Surface*, undulating and hilly; *soil*, fertile. *Min.* Stone coal and cavernous limestone; in the latter formation is the celebrated Mammoth Cave. (See *KENTUCKY*). *Cap.* Brownsville.

Edmonton, in *Canada*, a post-village of the prov. of Alberta, terminus of a branch of the Can. Pac. R.R., 175 m. N. of Calgary. *Pop.* (1897) about 350.

Edmonton, or **Edmiston**, in *Kentucky*, a post-village, cap. of Metcalf co.

Edmund I., king of England, son of Edward the Elder, succeeded his brother Athelstan in 941. Killed in 946.

Edmund II., surnamed *Ironsides*, succeeded his father Ethelred, 1016; but being opposed by Canute, he agreed to share the crown with him. Died the same year.

Edom, or **Idumæa**. (*Anc. Geog.*) The name given to the country inhabited by the descendants of Esau, who was living there B. C. 1739 (*Gen.* xxxii. 3). It extended originally from the Dead Sea to the Elanitic gulf of the Red Sea. The inhabitants refused to allow the Israelites to pass through their territory on their retreat from Egypt, B. C. 1452 (*Num.* xx. 14–21). Saul made war upon them B. C. 1093; (1 *Sam.* xiv. 47); and David established garrisons in their land B. C. 1040 (2 *Sam.* viii. 14). Solomon built a navy at Ezion-geber, B. C. 992 (1 *Kings* ix. 26), and Amaziah, king of Judah, gained a great victory, and took Selah, B. C. 825. The Edomites subsequently extended their borders as far north as Hebron, where they were defeated by Judas Maccabeus, B. C. 163, and the country was overrun by the Arabs in the 7th century.

Edred, king of England, was son of Edward the I., named the Elder, and succeeded his brother Edmund in 46. E. was of feeble health, and inclined to an ascetic life. He had for chief adviser, during the latter part of his reign, the celebrated Dunstan. Died in 955.

Edsallville, in *Pennsylvania*, a post-village of Bradford co., about 125 m. N. of Harrisburg.

educate, *v. a.* [Lat. *educō*, *educatus*—*e*, *ex*, and *duco*, to lead, bring, or conduct.] To bring up, as a child; to rear; to nurture; to teach.

education, *n.* [Fr. *éducation*, from Lat. *educō*, I lead out.] Education, as we know it to-day, is open to one objection—it does not “educate.” It belies its etymology; it does not “lead out” the mind; it simply clogs it with a mass of undigested facts. The mental food is not converted into mental muscle.

There are two great things that education should do for the individual—it should train his senses, and teach him to think. Education, as we know it in our schools and colleges, does not truly do either; it gives the individual only a vast accumulation of facts, unclassified, undigested, seen in no true relations. Like seeds in a box, they may be retained, but they do not grow.

The greatest educational need of the individual is a trained mind—a mind that is ready on the instant, not on the next day. With most persons, the intellectual brilliancy, the proper thing to say or to do, comes as an after-thought. An after-thought is but a beautiful possibility designed to fit a lost opportunity. It is no more helpful to a man than a flattering epitaph on his tombstone. With most persons this wit is like a night telegram—it is not delivered until the next morning. One expects his hand to be instantly ready to perform any motion of which it is capable; but he is resigned to the fact that his mind does not act quickly. He says, “readiness is born with people; it cannot be acquired.” If man’s

heart, lungs, or stomach are weak, he consults specialists, and never gives up until he obtains relief. But if he cannot remember names or faces; if he is subject to that intellectual remorse known as after-thought; if he has no eye for color, or taste for music; if he has no command of language; if there is lack of power in any respect in his mind, he is perfectly resigned, and says, “I am as God made me, and so I must remain.” When man fails, he always does this. He says, “I am as God made me;” but when he succeeds, he proudly proclaims himself a “self-made man.” If education gave the individual the proper exercises in years of training, his mind would be ready on the instant. I wish in this article to show wherein lies the failure of the present education, what is the great need of the individual, and to outline “Mental Training by Analysis, Law, and Analogy,” a system upon which I have spent many years in originating, developing, and testing in lectures and in practical class-work.

The Training is to the mind what a gymnasium course is to the body. It aims to quicken, intensify and develop the working of the mind, toning and exercising all weak parts. By a system of exercises it would train every sense, every faculty, every memory, every power, part and phase of mind, every mental muscle, making it supple and instantly responsive, as a massage stimulates the body. It would reveal to man his power and his weakness; teach him to know himself. Man, whatever be his line in life, needs a trained mind—one quickened, and in best health and condition, to be used on the instant. An untrained mind is like a torch—flickering, uncertain, scattering, wasting, and losing its light. The trained mind is like a search light, that instantly can turn every ray of its energy in perfect concentration upon any one point. It is not the energy it takes to do a thing that tires men; it is the energy they waste. Most men waste every day enough energy to run a genius. The fault with most persons is, not that they have not good minds, that they are not naturally bright, but merely that their minds are not trained, not systematized, not reduced to order. This condition “education” does not give; but education should give it as the fulfillment of its first duty. If aught in condemnation in this article seem sweeping, I wish it understood as relating to the “system.” It is in no wise a criticism of the work of individual teachers, professors, and other educators who have been successful. Whatever success may have come to individual teachers, has been because they revolted against conventional, machine methods.

Medical science to-day tells us that a single fundamental weakness in one organ in the physical body may assert itself successively, in the course of years, under perhaps a dozen distinct phases in as many parts of the body. All may be traceable, if our diagnosis be sufficiently analytic to discover the unity masquerading beneath these disguises, to one disorder. To this “root” we must direct all our energies. So it is with the many weaknesses and failures in the education of to-day. The root-weakness is *constant impression without a corresponding expression*. Under a hundred phases is this basic failure shown in our present education.

The mind may be divided roughly into three parts, or faculties—Impression, Repression, and Expression. The first, Impression, receives all raw material through the senses—seeing, hearing, touching, smelling, tasting, and the muscular sense. The second is Repression or memory, which by cerebration analyzes all this raw material, combines, recombines, deepens and classifies it ready for expression. The third, or Expression, uses the material the senses have received and memory has classified—in writing, speaking, clear formulation of words, drawing, or some other form of outward activity. Any thought, expressed, becomes modified by meeting new thought, re-enters the mind, is again retained in memory, again expressed, and this three-fold process is endlessly repeated. In the perfect mind this process is constant and continuous; in all minds the tendency to this is as natural as the circulation of the blood. Our modern “education” forces material into the mind (and even this through untrained senses) and without a corresponding expression, the mental food becomes congested, clogged and unavailable. Impressions, instead of being classified for instant readiness, are buried under succeeding layers of impressions, as geologic strata overlap and conceal one another.

Does not all the inability of an ordinary college graduate lie in this matter of expression? Is his mind quick to analyze a new subject and to see it in its relations? To ask a good question? To give a quick illustration? To make a fair description? To be ready in conversation? To sum up, to epitomize, to formulate his own views? To make a generalization? He has information, but so has a library; he has a vocabulary, but so has a dictionary. To be of service to him in the battle of life, his information and vocabulary must ever be held in instant readiness. “Mental Training” recognizes these three divisions; gives each careful exercises to keep each in its best condition, and then trains the mind to pass every impression through the three-fold process—a training that soon results in automatic action. Perfect education in any line is but conscious training of mind or body to act unconsciously.

This system of “Mental Training by Analysis, Law, and Analogy” is seen in natural working in the mind of a child before it has been perverted by “education.” The mind of the child is constantly analyzing. It is constantly seeking to trace effects back to causes; to predict effects from causes; it then seeks constantly to know the how, the why, the reason, the law governing what it sees. Then the child, wiser than it knows,

grasps the great truth that all law is universal, and seeks to project the law discovered in the single instance into other fields by analogy, saying, “Well, if that’s so, then this must be so.” A short time in public school tends to weaken and almost stifle this process forever. Analysis is the basis of every phase of mental power. It is nature’s method of turning impressions into mental muscle, of getting strength from the mental food; it classifies impressions so accurately and perfectly that they come forth instantly when needed. The analogy between mental and physical food is remarkably close. When food enters the body the salivary glands with their secretions begin to act upon it, and in the stomach and the whole digestive tract that food is fully and completely analyzed. The myosin is carried to one part of the body, the casein to another, the fibrin to another; so with the other elements, each to the very part of the body needing that element. This represents but analysis, distribution, and storage. So it is in the true working of the mind. Every impression reaching the mind is analyzed into its elements, and these are classified for instant use under many different phases. In many minds the impression is not thus analyzed; it is retained whole as a unit; it is undigested. It is as if bodily food were not chewed or masticated, but bolted whole. This would, of course, bring indigestion as an inevitable consequent. Our schools and colleges are elaborate institutions for promoting mental indigestion. If they placed this before them as their specific aim and ideal, they could not devise a better way to attain it than the present method. Our best educators perceive the weakness of results, but they do not take sufficiently radical steps to change the system. Every year the list of studies increases, new burdens are added to the weight to be carried by the scholars, new dishes are interlined on the already overcrowded menu. Education says, practically: “If you cannot digest all this food, we will add more food, heavier, more taxing on your strength, more useless.” The list of studies really necessary for the individual is so small, the items are so few, that I would not challenge criticism and raise a storm of discussion by giving the list here. The subjects themselves are of little importance, it is the method that is of vital importance. It is the “how” that counts, not the “what.” I write this with instances in my mind of wondrous progress made in classes taught by this system of “Analysis, Law, and Analogy.”

The beginning of all true education should be the direct training of the senses of the individual. It is of vital importance that they, the instruments that bring to him all the raw material of thought, should be trained to bring clear, vivid impressions to the mind. Man may need his Latin, his Greek, or his calculus occasionally in daily life; but his trained senses he needs every moment. He needs to remember a face; to recall a date; to have some one’s name ready on the tongue in an instant. Hundreds of instances might be cited to show the constant call upon the senses, and man often condemns his mind as weak and unreliable when it is merely his senses that have been shamefully slighted and perverted. “Education” is long, hard, tedious, and a comparative failure in the end, even from the standpoint of mere memorizing, partly because of this fundamental neglect of the senses. The child at its geography lesson, in so simple a thing as bounding the states, wastes a terrific amount of energy with but little real permanent gain. With hard study he goes over the boundary by rote, rehearsing the combination of descriptive words until he has them “fixed in mind,” so that they may be glibly presented to the teacher on demand. This gives the child but the sequence of words, not a distinct idea of the situation of the state that is desired. This is the hard, tiresome method of most children. Were the child trained by exercises in the sense of sight, he would take a clear, vivid, and permanent mental picture of the map of the United States, which he would never forget, and which he could revive at will.

Many men fail in spelling, hopelessly surrendering to the belief that they “never can learn to spell,” because the power of visualizing words has never been developed. The study of language, and the power of the sounds of words and their correct pronunciation, must come through an appeal to the ear. There are few, relatively speaking, even among our best educated men and women who give the pure, true pronunciation of words in our own tongue. Often they cannot detect any difference between two distinctly different sounds of a vowel, showing that the ear has not been trained to delicate discrimination. This training is too vital, too far-reaching in its possibilities to be passed by with incidental, occasional exercises in color, form, and size. It should be the slow, careful, systematic training of all the senses—sight, hearing, touch, taste, smell, and the muscular sense. Beginning in the very lowest classes, with simple, easy, and interesting exercises and environments, this training should never be lost sight of during the whole school and college course of the individual. If modern education does no more than this, if it would do no more than give the individual command of his senses, and teach him to think—this alone would be great—infinitely better than making him a weak solution of a hundred text-books.

Constant training in words is a vital part of “Mental Training.” Words are but symbols for mental images. As we quicken the mind to analyze and to note delicate differences and shades of meaning, we are intensifying its powers of Expression to greater care and accuracy. This at once reacts upon the Impression, making the mind keener and clearer in its classification, and more quickly responsive in action. This is but one phase in

which this constant analysis in the mind is trained to higher and more accurate thinking. This one great need in education to-day is passed by with a trivial recognition that is a disgrace to education. Training in Expression in all its phases is the subject of a thousand exercises in this system—in definition, in description, in imagination, in questioning, in conversation, &c., through years of training, which of course cannot here be even suggested.

A single illustrative case from memories of mental clinics entering over several years will make my meaning clearer as to the practical use of "Analysis, Law and Analogy," in observation. To a gentleman taking a course in "Mental Training," I was speaking of the importance, in observation, of constant preparation for instant use, and of the value of passing every impression through this three-fold process. We were just leaving the Museum of Art in New York, when I asked him what he had observed, what he had classified in his mind from what we had seen; for we had gone to the gallery with the idea of "training" rather than for the mere æsthetic pleasure of the pictures. He said he could not recall anything special, but he gave a good list of statues and pictures as he had seen them, showing that his eye-memory was well developed. "This," I said, "is good so far as it goes. But in itself it is not observation. The mere use of the senses is not observation. They are but the instruments of observation, as the telescope is the instrument of the astronomer. Observation is impression *plus* deduction; impression *plus* individual interpretation; it is what we see, *plus* what we think of it. A photographic camera can retain what passes before it, but it cannot observe; the phonograph, that marvellous new ear of science, can hear and it can even repeat what it has heard, but it cannot observe. In every observation there should be a deduction, a judgment, a classification—the beginning of an attempt at generalization.

"Let us now test the gallery by our three-fold process of 'Analysis, Law, and Analogy.' First, what picture in the whole gallery did you like best?" This forced him to pass every picture that he remembered in the gallery through a process of analysis, more or less perfect, qualitative and quantitative. After a few moments he decided on "Thesmilda before the Court of Germanicus." You remember the painting—a tall, regal woman holding a child by the hand, and standing a captive in queenly contempt before a barbaric Roman court, lying at ease on skins of animals. "What is the focus of the picture?" was the first question. "Thesmilda." "Wherein is the great power of Thesmilda?" "Her face." "Now we have roughly analyzed it, let us seek the secret of the face, its force, its law. What does the face mean, what does it show?" In a few moments we decided that it was "the noble superiority of a great nature that, in the moment of its abasement, rises above its persecutors." "And now for the analogy. Where, in all your reading, conversation, or observation, can you recall a situation wherein such an expression would have come to the face of any individual?" "Galileo, when he said, 'but the earth *does* move'." "Another?" After a little hesitation he said, "John Huss at the stake, when they lighted the fagots." "Another?" "Regulus before the Carthaginians." "Another?" "The same expression, softened, purified, and sanctified, would appear on the face of Christ on Calvary." "That is enough. You have passed this picture through the process of 'Analysis, Law, and Analogy,' and formulated a clear expression for your impression. It may be years from now that you will again see such a face, or hear of it, or read of it. Your prepared formulation will spring forth of itself; you will not have to halt and stammer, and then build up a weak, tentative expression of it. At the same time, the instances of Thesmilda before the Court of Germanicus, Galileo before his persecutors, John Huss at the stake, Regulus before the Carthaginians, and Christ on Calvary, will be revived together. You have trained them to answer to a given call. You have made an appointment with them. You have started a new centre of localization in the brain, at which all similar instances later will be automatically classified. They are grouped, not by any accidental resemblance, but by the highest psychological basis of classification—law, the oneness of relation between cause and effect shown in all."

A few other pictures were then studied, with a remarkable increase noted in quickness and grasp. In these exercises it was all individual work; he was not repeating what he had heard—he was thinking for himself. Some one else might have given only one weak analogy, but the process would have been the same. It may be said that this would be an exceedingly tiresome process if one had to go through it every moment with each new impression. It would be tedious were it always conscious; but it is only a matter of effort for a few times, then, at the mere glance the mind carries out the process automatically. It would be hard if we always had the same difficulty in writing our names as we did at our first trial; if bicycle riding were always accompanied by the early "headers" and the delicate studies in equilibrium; but these efforts soon sink as processes below the horizon of consciousness, and become almost automatic. We are in this exercise, and in all others, only intensifying and quickening a process all minds go through. It may be but in a vague way, so misty as to seem only an emotion of pleasure; or a feeling of interest, without thought of process; or so almost simultaneous with the impression as to seem instant and indescribable. This deepened process would not blunt the æsthetic pleasure in the pictures, any more than a man's enjoyment of a banquet would

be lessened because the food was being perfectly digested.

One of the new type-setting machines has an ingenious mechanism for distributing the type after it is used. The ninety different pieces of type used have as many different kinds of nicking, all types of the same letter being nicked identically. A large cylinder, with longitudinal ribs extending from top to bottom, holds the type. These ninety ribs are bent to correspond to the nickings of the type, and these pieces of type fall in a continuous string as the keyboard is manipulated. In distributing the type after using, the "matter" is placed, just as it is taken from the press, on a revolving drum above the stationary cylinder, of the same diameter. As the upper drum revolves, each piece of type falls when it reaches the ridge to which it corresponds. In the same way, with a trained mind, the illustration, thought, word, or comment, drops down *automatically* at the pressure of need. This is not an artificial system of mental training to "teach one never to forget." It is not *memory* training, but *mental* training. It is training the mind so that each new impression calls out the classified activities of the mind on the instant. If you put a package on the pan of a grocer's scale, the index finger moves around on the dial and stops at the number indicating the weight. If you press in succession a number of buttons in an adding machine, instantly the sum of those numbers is flashed before you. So it should be with the mind; there should be an instant decision, not because the decision is given without thought, but because that decision represents years and years of thought and deep analysis of the principles and relations making up the decision. An impromptu is but the lightning revelation of stored memories, instantly and perfectly combined to fit a need.

This process of "Mental Training by Analysis, Law, and Analogy," is not a machine system to take in an ordinary man and turn him out a genius. It fully recognizes the differences in mental equipment; it does not believe that men are born equal. It aims only to give man power over the mental capital he has—no matter how little it may be—to make it instantly available; and it shows him how to ever increase this capital. It teaches man to have all his powers in mental cash; not in check, notes, or other forms of futures. This training is "education" gives. If man were to have the most complete education of our schools and colleges, with the additional polish of the best European universities; if he never forgot one single thing he had ever learned; with all this he would not have a trained mind! What, then, of the millions who have less than this? Man, at the end of this period of study, should have either the facts he has studied, or the mental quickness from those facts, to apply to any subject in life. I cannot see how "Education" can escape this dilemma. As the mere product of education, merely looking at man from the standpoint of what education has done for him rather than his natural abilities, he has neither! Few men, two or three years after graduating, can give a good, fair ten-minute outline, or résumé, of any subject they have studied—not ten minutes were talking here and there on the subject, but a clearly formulated grasp of its essentials. They have neither the facts nor the mental strength and quickness to coordinate those facts.

For the future of education there are many hopeful signs in the first rays of dawn of better training, that already warm and color the horizon. The kindergarten teachings and methods of Froebel, with his wondrous insight into the child mind, and the splendid work of the past few years, is already bearing rich fruit. Color-work, according to the Prang system, in the primary classes, is another step in the right direction; the extension of drawing is another; manual training another; the growing scientific spirit of education, the passing away of examinations, the broadening of options in studies in our colleges, and the growing, live, liberal spirit of education—are all hopeful, and great steps in advance. Many others might be noted if space permitted. Our psychologic discovery is far in advance of our educational methods; but every psychologic truth should be translated into the vernacular of educational activity.

"Mental Training" should step in where kindergarten ends. It is not intended to substitute "Mental Training" altogether for education, but the modification it would make in the list of studies, and the methods and the term of service, would so materially change our education, that it would be practically a revolution in a few years. A radical reform must work slowly, and cannot always begin at the bottom; but it should have recognition of its need there. One thing I would suggest is, that we have a Chair of "Mental Training" in our colleges, entirely distinct from the Chair of Psychology, so ably filled in many of our universities. The duty of such a professor would be to take charge of some such course as here suggested; a course to take, say four years, and to cover constant conversations and exercises on training the senses, memory, reading, observation, conversation, the study of nature, illustration, imagination, questioning, words, analysis, law, analogy, &c., &c.

The professor of "Mental Training" should also be consulting physician on the mind to the students of that college. A student could go to him and say, "I have studied my mathematics faithfully for five weeks, and make no headway. What is the matter with me?" The professor would examine into his methods of study, his standing in other branches; study his mind as a physician would the body, and discover the reason for the inability. It may be a failure to master the first

problem, and all that followed was impact, not progress; it may be that the student had an excellent eye-memory and studied all his mathematics aloud, taking it through his weaker sense—in fact, any of a dozen other elements may be the one at fault. This discovered, individual diagnosis would result in an individual treatment. And so months and years of wasted energy might be spared to students, who force their way through many studies as a gimlet cuts into wood. This training should be part of the normal training of all teachers; and gradually its effect would be felt in a wonderful simplifying and lessening of the list of studies; the leaven of reform would then begin to work in the lower grades, and gradually make itself felt throughout the system.

"But," Education claims, in answer to this charge, "I do not expect students to remember all they have learned; much is given only for mental discipline and training." Then Education must face the issue: results; its theory and its practice do not agree. It is in the position of the man of whom his young son said: "Yes, father is a Christian, but he is not working at it much now." When man has given the best of his early life—from five to twenty or twenty-five years of age—to education, he should surely have the mental quickness and control of his mind for the years. If Education cannot justify herself on an accounting for that time, cannot show an equivalent mental strength for those years of study, then she is that degree weak—unequal to her duty, her opportunity. As a mere business matter, man should be able to demand of education a settlement. He should dare say: "Education, I have given you fifteen years of faithful service to the course of study you have established—what have you given me?" And Education she cannot prove that she has been equal to her trust; must accept man's criticism; must listen in simple justice to his plea for special training in all that develops him as an individual. WILLIAM GEORGE JORDAN

Educational, *a.* Pertaining to education; having reference to education; derived from education.

Educationalist, *n.* One who is skilled in education; one who theorizes upon, or advocates, or promotes education, or any system or systems thereof.

Educator, *n.* [Lat.] One who educates; a teacher, an instructor in learning.

Educe, *v. a.* [Lat. *educō*, *eductum*—*e*, and *duco*, *ductus* to lead.] To extract, to elicit; to produce from a state of occultation.

Educible, *a.* That may be educed.

Eduction (*e-dūk'shōn*), *n.* [Lat. *eductio*.] Act of drawing out or bringing into view.

Eductive, *a.* Having a tendency to draw out.

Eductor, *n.* One who, or that which educts, or draws out or forth, elicits, or extracts.

Educorant, *a.* (*Med.*) That has the property of sweetening.

—n. (*Med.*) A medicine which purifies the fluids, depriving them of their acrimony.

Educorate, *v. a.* [Fr. *édulcorer*, from Lat. *e*, and *corare*.] To sweeten.

(*Chem.*) To deprive a substance of its acid and agreeable taste; to purify it from any soluble substance.

Educoration, *n.* Act of sweetening.

(*Chem.*) The cleansing of substances, especially of verulent precipitates, by the repeated affusion of water so as to remove all soluble matters, and render them free from taste and smell.

Educorative, *a.* Having the property of sweetening, or freeing from acids.

Educorator, *n.* An instrument for supplying small quantities of water to test-tubes, watch-glasses, &c. dropping-bottle.

EDWARD THE ELDER, king of England, succeeded his father, Alfred the Great, 901. His succession was disputed by his cousin, Ethelwald the Atheling, who obtained the help of the Danes. The conflict ended with the death of Ethelwald in battle, in 905. But Edward still carried on the war with the Danes; Mercia, Northumbria, and East Anglia were subdued by him; and he extended his dominions by conquests in Scotland and Wales. D. 925.

EDWARD THE MARTYR, son of Edgar, B. 962, crowned 969. He was murdered by order of his stepmother Elfrida at Corfe Castle, after a reign of 3 years.

EDWARD THE CONFESSOR, son of Ethelred, succeeded Harthacnute in 1041. Having been reared in Normandy brought over many of the natives of that country, who he preferred at his court, which gave great disgust to his Saxon subjects. Notwithstanding this, he kept possession of his throne, and framed a code which is supposed to be the origin of the common law of England. He abolished the tax of Danegelt, was the first who pretended to cure the king's evil by touch, and restored Malcolm to the throne of Scotland, which had been usurped by Macbeth. He consulted William of Normandy about the choice of a successor, and this afterwards furnished that prince with a plea for invading England after the death of Edward, in 1066.

EDWARD I. (*Norman line*), surnamed LONGSHANKS, B. 1155, succeeded his father, Henry III., in 1272. At the time of his father's death he was in Palestine, fighting against the Saracens for the recovery of Jerusalem, and when he returned, completed the conquest of Wales and subdued Scotland. To preserve Wales, he caused his son, who was born in Caernarvon, to be called the "Prince of Wales," which, ever since, has continued to be the title of the eldest son of the king of England. In endeavoring to break the spirit of the Scotch, he was unsuccessful, the patriotism of Wallace and his followers completely baffling his attempts at the entire subjugation.

tion of that people. D. 1307. — Whilst in the Holy Land, Eleanor, the wife of this sovereign, saved his life by sucking the poison from a wound which he received from

Fig. 909. — FEMALE COSTUMES, (time of Edward I.)

a vengeful assassin. She was the daughter of Ferdinand III., king of Castile. His second wife was Margaret, daughter of Philip the Hardy, king of France. The laws which he framed entitle him to the name of the English Justinian.

EDWARD II., son of the above, was created Prince of Wales in 1284, and after his accession to the throne suffered himself to be governed by his favorites, Gaveston and the Spencers, which occasioned the barons to rise against him. In his reign the battle of Bannockburn was fought near Stirling, in Scotland, which restored to that country whatever she had lost in the previous reign, of her independence. In 1327, he was deposed by his subjects, and his crown conferred on his son, when he was confined in Berkeley Castle, Gloucestershire, where he was murdered in 1327.

EDWARD III., eldest son of Edward II. and Isabella of France, b. 1312, succeeded to the throne on the deposition of his father, 1327. Although a regency was appointed, the chief power was held by the queen and her paramour, Roger Mortimer, earl of March. In 1330, E. assumed the government, had Mortimer seized and hanged, and imprisoned Queen Isabella. In 1333 he invaded Scotland, and defeated the regent at Halidon Hill. The greater war with France soon withdrew his attention from Scotland. He assumed the title of king of France, invaded the country from Flanders, but without any successful result, renewed the invasion in 1340, when he defeated the French fleet at Sluys, besieged Tournay, and concluded a truce. The war was renewed, and another truce made in 1343, to be broken the following year. In 1346 he won the great victory of Crecy, took Calais in 1347, and concluded another truce. During E.'s absence in France, the Scots invaded England, and were defeated at Nevil's Cross, David II. being taken prisoner. In 1356 E. the Black Prince invaded France, and gained the victory of Poitiers, taking the French king and his sons prisoners. The king was released after four years, on the conclusion of the peace of Bretigny. David of Scotland was released for a heavy ransom in 1357. War broke out again with France in 1369, and in 1373 John of Gaunt marched without resistance from Calais to Bordeaux. The long wars of Edward III., though almost fruitless of practical result, appear to have been

Fig. 910. — COSTUMES OF THE TIME OF EDWARD III.

popular; and his numerous parliaments granted liberal supplies for carrying them on, gaining in return confessions of the Great and other charters, and many valuable concessions. His victories raised the spirit and the fame of his country, and with the evident military power of England grew also her commerce and manufactures. In this reign Wickliffe began his assault on the Church of Rome; the Order of the Garter was instituted; cannon began to be used in war; and the

first English gold coin was struck. E. d. at Shene, now Richmond, June 21, 1377. By his queen Philippa, daughter of William III., count of Holland and Hainault, he had six sons and five daughters.

EDWARD IV., son of Richard, Duke of York, succeeded Henry VI. in 1461. E. came to the throne in the midst of the fierce struggle between the Yorkists and Lancastrians, in which he greatly distinguished himself by his courage and military skill. He won a great victory over the Lancastrians at Northampton, in July, 1460, and a second at Mortimer's Cross, in February, 1461; after which he marched on London, and was proclaimed. A few weeks after his accession he defeated them a third time at Towton, in Yorkshire. The war continued with varying fortunes till 1464. In the same year he married Lady Elizabeth Grey, which so disgusted the earl of Warwick, commonly called the king-maker, that he joined the Lancastrian party, and the civil war was recommenced. Warwick defeated Edward's forces near Banbury in 1469. Soon afterwards Warwick fled to France, from whence he returned with a supply of troops, and proclaimed Henry. E. escaped beyond sea, and Warwick released Henry from the Tower, and set him on the throne; but E. returned with succors, and marched to London, where he took Henry prisoner. He shortly after won the battle of Barnet, in which Warwick fell. Another victory at Tewksbury secured to him the quiet possession of the throne. Preparations were made for war with France, and an expedition sent, which was, however, fruitless. War broke out also with Scotland, but nothing of importance occurred. In 1478 Edward had his brother, the duke of Clarence, condemned and put to death as a traitor. Clarence had married Isabel, daughter of the earl of Warwick, and had taken part with him against the king. D. 1483, aged 41.

EDWARD V., son of the preceding, whom he succeeded at the age of 12 years, was smothered, with his brother, in the Tower, by order of their uncle and guardian, Richard, Duke of Gloucester, 1483.

EDWARD VI., the only son of Henry VIII., by his queen, Jane Seymour, 1537. He succeeded his father in 1547, but by reason of his tender age and early death, had little to do with the important measures that mark his reign. His uncle, the earl of Hertford, was named protector, and created duke of Somerset; but in 1549 his place was taken by Dudley, earl of Warwick, created duke of Northumberland; and Somerset, two years later, was charged with treason and felony, and beheaded. Both of these, however, carried on the work of the reformation. Somerset made an expedition into Scotland, and gained the victory of Musselburgh, or Pinkie, in 1547; Warwick defeated the insurgents under Ket, the Norfolk tanner, in 1549; a very severe law was passed against vagabonds, but had to be soon repealed. The Act of Six Articles was repealed, and the use of the Book of Common Prayer established. The great aim of Northumberland was to secure the succession to the throne of England for his family. With this view, he married his son, Lord Guildford Dudley, to Lady Jane Grey (q. v.), and obtained from the weak and dying E. a document settling the succession on Jane Grey, to the exclusion of Mary and Elizabeth. D. 1552.

EDWARD, PRINCE OF WALES, surnamed the BLACK PRINCE from the color of his armor, was the eldest son of Edward III., and was b. in 1330. In 1345 he accompanied his father in his expedition to France, and displayed unusual heroism at the battle of Crecy. In 1356 he gained

Fig. 911. — TOMB OF THE BLACK PRINCE AT CANTERBURY.

the battle of Poitiers, and brought the French king and his son prisoners to England. He died before his father, in 1376, leaving two sons, the elder of whom, Richard, was the successor of Edward III.

EDWARDS, JONATHAN, a celebrated American theologian and metaphysician. b. at Windsor, Conn., 1703. In 1722 he became a preacher at New York to a Presbyterian congregation, and in 1724 was chosen tutor of Yale College. In 1726 he resigned that station, and became assistant to his grandfather, who was a minister at Northampton. Here he continued till 1750, when he was dismissed for refusing to administer the sacrament to those who could not give proofs of their being converted. The year following he went as missionary among the Indians, and in 1757 was chosen president of the college of New Jersey, where he died in 1758. He wrote a *Treatise concerning Religious Affections*; the *Life of David Brainerd*, the *Missionary*; an *Inquiry into that Modern prevailing Notion of that Freedom of Will which is supposed to be essential to Moral Agency*, &c. The last-named work is that on which his fame rests, and is one of the most powerful expositions and defenses of the views known as Calvinistic. According to Robert Hall, E. "ranks with the brightest luminaries of the Christian Church, not excluding any country or any age since the apostolic."

EDWARDS, in *Illinois*, an E.S.E. co.; area, about 200 sq. m. *Rivers*, Wabash, and Little Wabash rivers, and Bon Pas Creek. *Surface*, undulating; *soil*, fertile. *Cap.* Albion. *Pop.* (1897) about 10,500.

EDWARDS, in *Kentucky*, a post-office of Logan co.

EDWARDS, in *New York*, a post-township of St. Lawrence co., on the Oswegatchie river, 22 m. S.S.W. of Canton. *Pop.* (1897) abt. 1,400.

EDWARDS, in *Texas*, a S. W. co.; area 2,620 sq. m. *Rivers*, Guadalupe and Rio Frio. *Pop.* (1890) 1,970.

EDWARDSBURG, in *Michigan*, a post-village of Cass co., on Pleasant Lake, abt. 140 m. S.W. of Lansing.

EDWARDSPORT, in *Indiana*, a post-village of Knox co., on the W. Fork of White river, about 40 m. S. by E. of Terre Haute.

EDWARDS STATION, in *Ill.*, a former P. O. of Peoria co. EDWARDSTOWN, a village of Lower Canada, co. of Beauharnais, abt. 54 m. S.E. of Montreal.

EDWARDSVILLE, in *Illinois*, a thriving city, cap. of Madison co., on the Cahokia creek and several lines of R.R., 20 m. N.E. of St. Louis, Mo. Has manuf. of bricks, flour, &c., and considerable business in mining and shipping coal. *Pop.* (1897) about 4,200.

EDWARDSVILLE, in *Indiana*, a P. O. of Floyd co.

EDWARDSVILLE, in *Kansas*, a P. O. of Wyandotte co.

EDWARDSVILLE, or THE NARROWS, in *New York*, a post-village of Norristown township, St. Lawrence co., on Black Lake, about 18 m. S.S.W. of Ogdensburg.

EDWARDSVILLE, in *Ohio*, a post-village of Warren co., about 80 m. S.W. of Columbus.

EDWINA, in *Ohio*, a post-office of Monroe co.

EDWY, king of England, son of Edmund I., succeeded his uncle Edred in 955. He married Elgiva, his relation within the prohibited degrees of kindred, which proved the ruin of both. Archbishop Odo seized the queen, and having branded her in the face with a hot iron, sent her to Ireland, after which she was put to a cruel death. E. was driven from the throne, and died under excommunication, 959.

EELCOO, (a'kloo,) a town of Belgium, 11 m. from Ghent. *Manuf.* Woollens, chocolate, and tobacco. *Pop.* 10,476.

EEL, n. [A.S. *æl*; G. *D.*, and Dan. *aal*; Lat. *anguilla*; Sansk. *ahī*, a serpent.] (*Zoöl.*) The *Anguillidae*, a family of fishes belonging to the apodal section of the *Mulacopterygii*. Their long and cylindrical bodies are covered by a thick and soft skin, in which the scales are so deeply imbedded as to be scarcely apparent. The gill-orifices are very small, and are situated far back, so that there is a long passage from the gill-chamber outwards; and hence, the gills not soon becoming dry, these fishes can remain a long time out of the water, some of them, indeed, leaving it of their own accord. Most of the eels are included in the Linnaean genus *Muraena*, and are divided by some naturalists into the families *Synbranchiæ*, *Muraenidæ*, *Anguillidæ*, *Congeridæ*, and *Ophiduridæ*. The *Synbranchiæ* have the gill-passages so united under a common integument as to present externally only a single orifice: they are almost destitute of fins. The species are few, and they are chiefly found in tropical seas. The *Muraenidæ* are also generally destitute of fins, or nearly so; they are all destitute of scales, and never found in fresh water. The *Anguillidæ* are freshwater fishes, though some of them occasionally visit the sea. They have pretty large pectoral fins, anal and dorsal fins extending to and encompassing the tip of the tail, and numerous longish scales imbedded in groups in the skin, so as to resemble lattice-work. *Ophiduridæ*, or snake-eels, are distinguished by the tail ending in a conical pointless fin. The common fresh-and-salt-water eel, *Anguilla bostoniensis*, of the United States, is 12 to 20 inches in length. The high repute in which eels were held by the ancients is well known: they were deified by the Egyptians, and invoked by the ancient Greeks as "the Helen of the dinner-table," because every guest strove, like Paris, to supplant his neighbor, and keep her for himself. The CONGER EEL (*Anguilla conger*), in its general appearance, is closely allied to the common Eel, but differs materially from it in size, being sometimes ten feet in length, as thick as a man's thigh, and weighing 100 lbs.; it is also in general of a darker color on the upper part, and of a brighter hue beneath. The Conger resides generally in the sea, and is only an occasional visitant of fresh waters. In the winter it is supposed to imbed itself under the soft mud, and to lie in an inactive state; but on the approach of spring it emerges from its concealment, and visits the mouths of rivers. Its flesh is tough and disagreeable. — The genus *Gymnotus* has the anal fin beneath a greater part of the body, and generally as far as the end of the tail, but not dorsal. — The Electrical Eel, *G. electricus*, of the warm regions of S. America, is 5 to 6 feet long, and is celebrated for its ability to communicate such electrical shocks that men and animals are struck down by them.

Fig. 912. — CONGER-EEL. (*Anguilla conger*.)

EEL, in *Indiana*, a township of Cass co. EEL CREEK, in *California*, rises in Trinity co., and flows N.W. into the Pacific Ocean, abt. Lat. 40° 40' N. EEL-GRASS, n. (*Bot.*) See ZOSTERA. EELPOT, n. A basket used in bobbing for eels. EELPOUT, n. (*Zoöl.*) A name sometimes given to the turbot, in England.

EEL RIVER, in *California*, rises in Mendocino co., and flowing N.W. through Humboldt co., empties into the Pacific Ocean, abt. 15 m. N.E. of Cape Mendocino.

EEL RIVER, in *California*, a post-village and township of Humboldt county, on Eel River, about 20 miles S. of Eureka.

EEL RIVER, in *Indiana*, a post-township of Allen county.

— Another, rises in Boone co., and flowing first S.W. and then S.E., enters the West Fork of White River abt. 3 m. above Bloomfield in Greene co. Length abt. 100 m.

—A township of Greene co.

—A township of Hendricks co.

Eel-spear, *n.* A spear or sharp-pointed instrument used in taking eels.

E'en, a contracted form for **EVEN**, *q. v.*

Een, the former plural **EYES**, *q. v.* (Sometimes written *eyne*.)

E'er, a contraction for **EVER**, *q. v.*

Eerie, **Ee'ry**, *a.* [Scot.] Exciting fear; weird-like; ghostly.

"The *erie* beauty of a winter scene." — *Tennyson*.

—Susceptible to fear; prone to feel terror.

Effable, *a.* [Lat. *effabilis*.] That may be altered or elucidated.

Efface, *v. a.* [Fr. *effacer*, from Lat. *e*, *ex*, and *facies*.] To remove from the face or surface of anything; to destroy or obliterate, as a figure on the surface of anything, whether painted, written, or carved, so as to render it invisible or not distinguishable; to expunge or render illegible; to blot out; to obliterate; to erase; as, to *efface* an inscription.

—To destroy, as any mental impression; to wear away.

"Nor length of time our gratitude *efface*." — *Dryden*.

Efface'able, *a.* That may be effaced.

Effacement, *n.* Act of effacing; state of being effaced.

Effect, *n.* [Lat. *effectus*, from *efficis*. See the verb.] A doing or executing; accomplishment; performance; that which is produced by an agent or cause; result; consequence; event; purpose.

"Effect is the substance produced, . . . by the exerting of power." — *Locke*.

—General intent of any cause; consequence intended; utility; profit; advantage; — with *to*; as, I spoke to him to that *effect*. — Reality; not mere appearance; fact, or specious imitation of fact; force; gravity of appearance; importance; account; as, to coerce one with *effect*. — First impression produced by a work of art, or other striking exhibition; result of all the peculiar excellences exemplified by a true master; — hence, admiration; enjoyment; appreciation; as, the *effect* produced by a good opera.

—*pl.* Goods; movables; personal estate; as, their *effects* were sold by auction.

—*v. a.* [Lat. *efficio*, *effectum* — *e*, or *ex*, and *facio*, to make. See **FACT**.] To make out; to work out; to produce, as a cause or agent; to cause to be — To bring to pass; to accomplish; to fulfil; to achieve; to complete; to execute; as, the change was *effected* without difficulty.

Effectible, *a.* That may be effected; that may be done or achieved; practicable; feasible.

Effection, *n.* [Lat. *effectio*.] A doing, performing, or effecting; creation or production.

(*Geom.*) The construction of a proposition; a problem or praxis drawn from some general proposition.

Effective, *a.* [Fr. *effectif*, from Lat. *effectivus*.] Having the power to effect, cause, or produce; producing effect; efficacious; efficient; effectual; operative; active; serviceable; powerful; energetic.

Effectively, *adv.* With effect; powerfully; with real operation.

Effectiveness, *n.* Quality of being effective.

Effectless, *a.* Without effect; useless; impotent.

Effector, *n.* [Lat.] One who effects; one who produces or causes; a maker or creator.

Effectual, *a.* Producing an effect; or the effect desired or intended; having adequate power or force to produce the effect.

Effectually, *adv.* With effect; efficaciously; thoroughly.

Effectualness, *n.* Quality of being effectual.

Effectuate, *v. a.* [Fr. *effectuer*; L. Lat. *effectuo*, *effectutus*.] To carry into effect; to bring to pass; to achieve; to accomplish; to fulfil.

Effectuation, *n.* The act of effectuating. (*R.*)

Effeminacy, *n.* Quality of being effeminate; softness, delicacy, and weakness unbecoming a man; unmanly delicacy; womanish softness or weakness; voluptuousness; indulgence in unmanly pleasures.

Effeminate, *a.* [Fr. *efféminé*; Lat. *effeminatus*, from *effemino*, to make womanish — *e*, *ex*, and *femina*, a woman.] Womanish; having the qualities of the female sex; soft or delicate in an unmanly degree; weak; tender; unmanly; resembling the practice or qualities of the female sex; voluptuous; cowardly.

—*v. a.* [Lat. *effemino*, *effeminatus*.] To make womanish; to unman; to weaken.

—*v. n.* To grow womanish or weak; to melt into weakness.

—*n.* An effeminate person.

Effeminately, *adv.* In an effeminate manner; womanishly; weakly; softly.

Effeminateness, *n.* State or quality of being effeminate; unmanly; softness; effeminacy.

Effendi, *n.* [Turk., from M. Gr. *aphentes*, from Gr. *authentes*, an absolute master, commander. See **AUTHENTIC**.] A term substituted in the modern Turkish language for the Tartar word *chelebi* (noble), now applied to persons of inferior rank. *Effendi* is particularly applied to the civil, as *aga* is to the military officers of the sultan; and both are used in conversation, commonly joined to the name of their office. Thus, the sultan's first physician is called *Hakim effendi*, the priest in the seraglio, *Iman effendi*, &c. The *Reis effendi*, or chancellor of the empire, is also minister of foreign affairs, and negotiates with the ambassadors and interpreters of foreign nations. Greek children are in the habit of calling their fathers *effendi*.

Effluent, *a.* [Lat. *effluens*, *effluere*, to bear out.] (*Med.*) Conveying outward, as from the centre to the periphery.

Effervesce, *v. a.* [Lat. *effervesco*, inceptive from *e*, *ex*, and *ferveo*, to boil, to ferment, to glow. See **FERVENT**.] To boil up or over; to foam up; to rage; to be in com-

motion, like liquor when gently boiling; to bubble and hiss, as fermenting liquors, or any fluid; to work, as new wine.

Efferves'cence, or **EFFERVES'GENCY**, *n.* [Fr., from L. Lat. *effervescentia*.] Act of effervescing; a kind of natural ebullition; that commotion of a fluid which takes place when some part of the mass flies off in the form of gas, producing innumerable small bubbles.

Efferves'cent, *a.* [Fr., from Lat. *effervescent*.] That effervesces; gently boiling or bubbling, by means of the disengagement of gas.

Efferves'cible, *a.* That may effervesce.

Effete, *a.* [Lat. *effetus*, *effetus* — *e*, *ex*, and *fetus*, a bringing forth young, offspring, from root *fe*, same as *fu*, or *fi*, to produce, to bring forth; Gr. *phūō*. See **FETUS**.] Weakened or exhausted by bringing forth young; barren; having lost the power of production. — Worn out with age.

Efficacious, *a.* [Fr. *efficace*; Lat. *efficax*, *efficacis*, from *efficio*. See **EFFECT**.] Effectual; productive of effects; producing the effect intended; having the power adequate to the purpose intended; powerful.

Efficaciously, *adv.* Effectually; in such manner as to produce the effect desired.

Efficaciousness, *n.* Quality of being efficacious.

Efficacy, *n.* [Fr. *efficace*; Sp. *eficacia*; It. *efficacia*, from L. Lat. *efficacia*, from Lat. *efficax*.] Power to produce effects; production of the effect intended; virtue; force; energy.

Efficience, or **EFFICIENCY**, *n.* [L. Lat. *efficientia*, from Lat. *efficiens*, from *efficio* — *e*, *ex*, and *facio*, to make.] Act of producing effects; a causing to be or exist; effectual agency; power of producing the effect intended.

Efficient, *a.* [Lat. *efficiens*.] Effecting; effective; effectual; competent; capable; causing effects; producing; that causes anything to be what it is.

—*n.* The cause of effects; factor.

Efficiently, *adv.* With effect; effectively.

Effigial, *a.* Exhibiting an effigy. (*R.*)

Effigiate, *v. a.* [Lat. *effigiare*, *effigiatum*. See **EFFIGY**.] To form in semblance. (*R.*)

Effigiation, *n.* Act of imaging.

Effigy, *n.* [Lat. *effigies*, from *effingo* — *e*, *ex*, and *fungo*, to form, to fashion. See **FIG**.] The image or likeness of a person; resemblance; representation; any substance fashioned into the shape or likeness of a person; portrait; likeness; figure, in sculpture or painting. This word is seldom, if ever, used in the fine arts; but it is commonly applied to the head, bust, or full-length portrait of monarchs, &c., on coins or medals. — To *hang* or *burn* in *effigy*, denoted formerly the execution or degradation of a condemned criminal, when he could not be personally apprehended, by subjecting his picture to the formalities of an execution.

Effingham, in *Georgia*, an E. co.; area, abt. 449 sq. m. *Rivers*, Savannah and Ogeechee rivers (which latter separates the State from South Carolina), and Ebenezer creek. *Surface*, level; *soil*, sandy, and not fertile. *Cap.* Springfield. *Pop.* (1890) 5,599.

Effingham, in *Illinois*, a S.E. co.; area, abt. 500 sq. m. *Rivers*, Little Wabash. *Surface*, level; *soil*, fertile. *Min.* Copper, iron, and lead. *County-seat*, Effingham. *Pop.* (1890) 19,358.

—A thriving city, cap. of Effingham co., on four lines of R.R., 99 m. E.N.E. of St. Louis, Mo. In the center of a fine agricultural region; has some manufactures and a good local trade. *Pop.* (1897) abt. 4,500.

Effingham, in *Kansas*, a P. O. of Atchison co.

Effingham, in *New Hampshire*, a post-town of Carroll co., abt. 55 m. N.E. of Concord.

Effingham, in *S. Car.* a post-town of Darlington co.

Effingham Falls, in *N. H.*, a p-village of Carroll co.

Efflu'ion, *n.* The act of breathing out.

"A soft *efflu'ion* of celestial fire

Came, like a rushing breeze, and shook the lyre." — *Parnell*.

Effloresce', *v. n.* [Lat. *effloresco* — *e*, *ex*, and *floresco*, inceptive from *florere*, from *flor*, *floris*, a flower.] To blow or blossom forth; to bloom; to flourish.

(*Chem.*) To form a mealy powder on the surface; to become dusty on the surface; to form saline vegetation on the surface, or to shoot out minute specular crystals.

Efflores'cence, or **EFFLORESCENCY**, *n.* [Fr.] (*Bot.*) The time of flowering; production of flowers; the season when a plant shows its first blossoms.

(*Med.*) A redness of the skin; eruptions.

(*Chem.*) The spontaneous crumbling away of transparent crystals from losing their water of crystallization. The action generally continues until the whole has fallen to powder. According to Mr. Debray, a hydrated salt effloresces when the tension of its watery vapor is greater than that of the aqueous vapor existing in the atmosphere. The term is also applied to the white incrustation seen on the surface of walls.

Efflores'cent, *a.* [Fr., from Lat. *efflorescens*.] (*Bot.*) Shooting out in the form of flowers.

(*Chem.*) Shooting into white threads or spiculæ; forming a white dust on the surface.

Effluence, or **EFFLUENCY**, *n.* [Fr.; Lat. *effluentia*, from *effluo*, *effluens* — *e*, *ex*, and *fluo*, to flow.] A flowing out; that which flows or issues from any body or substance.

Effluent, *a.* [Fr. *effluent*, from Lat. *effluens*.] Flowing out.

—*n.* (*Grog.*) A stream that flows out of another stream, or out of a lake.

Efflu'vial, *a.* That may be thrown out in the form of effluvium.

Efflu'vial, *a.* Pertaining to effluvia; containing effluvia.

Efflu'vium, *n.*; *pl.* **EFFLUVIA**. [Lat., from *effluo* — *e*, *ex*, and *fluo*, to flow; Fr. *effluve*.] A flowing out; that which

flows out in the form of vapors; the minute particles which exhale from terrestrial bodies. The term, both the singular and plural, is generally restricted to offensive odors or noxious gases, or such as are injurious to health.

Efflux, *n.* [Lat. *e*, or *ex*, and *fluxus*, a flowing.] of flowing out; as, a copious *efflux* of matter. — Act issuing in a stream. — Effusion; flow; as, "the *efflux* of men's piety." (*Hammond*.) — Emanating; "efflux divine!" (*Thomson*.)

Efflu'xion, *n.* [Lat. *e*, or *ex*, and *fluxio*, a flowing from *fluo*, to flow.] Act of flowing out; that which flows out; effluvium; emanation.

Effo'dient, *a.* [Lat. *effodiens*, *effodere*, to dig or digging up; accustomed to dig. (*R.*)

Effort, in *Pennsylvania*, a post-office of Monroe co.

Effort, *n.* [Fr., from *fort*, strong; Lat. *fortis*.] An exertion of strength or power; strenuous exertion to accomplish an object; endeavor; exertion; struggle; attempt; trial; essay.

Effortless, *a.* Making no effort.

Effos'sion, *n.* [Lat. *effossio*, from *effodere*, to dig or The act of digging up.

"The *effossion* of coins." — *Arbuthnot*.

Effrac'tion, *n.* [Fr.] (*Crim. Law.*) A breach made by the use of force.

Effrac'tor, *n.* (*Crim. Law.*) One who breaks through one who commits a burglary.

Effran'chise, *v. a.* [Lat. *ex*, out, and *franchise*, *q. v.*] To invest with franchises or privileges.

Effron'tery, *n.* [Fr. *effronterie*, from *front*, *q. v.*] Boldness; boldness of front; impudence; shameless boldness; boldness transgressing the bounds of modesty and decorum; assurance; audacity.

Efful'gence, *n.* [L. Lat. *effulgentia*, from Lat. *effulgens*, from *effulgeo* — *e*, *ex*, and *fulgeo*, to shine. See **GEN**.] A shining or gleaming forth; a glittering flood of light; a great lustre or brightness; splendor.

Efful'gent, *a.* [Lat. *effulgens*.] Shining; gleaming; bright; splendid.

Efful'gently, *adv.* With effulgence.

Effuse, *v. a.* [Lat. *effusus*, from *effundo* — *e*, *ex*, *fundo*, to pour. See **FUSE**.] To pour out, as a fluid; to shed.

—*a.* (*Bot.*) Very loosely spreading; — applied to an inflorescence.

(*Zoöl.*) Said of a shell, when its lips are separated by a groove or channel.

Effus'ion, *n.* [Fr., from Lat. *effusio*.] Act of pouring out, as a liquid. — A shedding or spilling; waste.

"Stop *effusion* of our Christian blood." — *Shaks*.

—A pouring out of words.

"Endless *effusions* of indigested prayers." — *Hooker*.

—Act of pouring out or bestowing divine influence. (*Hammond*) — The thing poured out.

(*Med.*) The pouring out of any fluid, whether in cavity of the body or into the cellular tissue. An effusion may be either of serum or of blood, which, if poured out on the brain, or into the bag of the lungs, induces apoplexy, or water on the brain, in the first instance; and congestion, or water in the chest, in the other. Effusion may take place in all parts of the body into the joints, the lining membranes of cavities, or between the skin and muscles. — See **CONGESTION**.

Effus'ive, *a.* Pouring out; that pours forth largely.

Effusively, *adv.* In an effusive manner.

Effusiveness, *n.* State of being effusive.

E Flat, (*Mus.*) The note E depressed half a tone the minor seventh of F, and the second flat introduced in modulating by fourths from the natural diatonic mode.

Eft, *n.* [Sax. *efeta*, *efete*.] (*Zoöl.*) A common name for the newt. See **SALAMANDRIDE**.

E. G. An abbreviation of the Lat. *exempli gratia*, for sake of an example, for instance.

Ega, (*aga*), a town of Brazil, prov. of Para, on the T. near the Amazon.

Egad, *interj.* Perhaps a corruption of the oath "God"; — noting exultation.

Egalité, **PHILIPPE**. See **ORLÉANS**.

Egan, or **EA'GAN**, in *Minnesota*, a township of Dakota co., on the Minnesota River; *pop.* about 600.

Eg'bert, considered the first king of all England, of the royal family of Wessex. On the death of Britton, he succeeded him as king of Wessex, 800, reduced other kingdoms, and rendered them dependent on his, in 827. D. 838.

Egede, **HANS**, (*ai'geed*), the apostle of Greenland, 1721, Norway, 1686. He was appointed to the church of Bergen in Norway in 1707, but having determined to proceed to Greenland to convert the natives, he resigned his cure, and embarked in 1721. He remained fifteen years in Greenland, during which time he labored zealously among the people, and by his preaching and teaching secured a permanent footing there for the Christian mission, which owed its origin to him. On his return to Copenhagen, he employed himself in instructing missionaries in the dialects of Greenland; and in 1740 was made a bishop. D. 1758. He has described the course and success of his labors in *Det gamle Grønlands Perlestrat* (Copenh. 1729 and 1741). He was ably seconded in his labors by his wife and his son, Povel and Niels.

Egedes Minde, a district of N. Greenland, comprising numerous islands, and named after Hans Egede, *q. v.*

Eger, *n.* See **EAGRE**.

(*Hort.*) An early blossoming tulip.

E'ger, a river of E. Germany, which rises in N. Bavaria, and after a course of 125 m., joins the Elbe about 3 m. from Prague.

Eger, a town of Bohemia, on a rocky eminence, and on the right bank of Eger River, 90 m. W.N.W. of Prague. *Manuf.* Cotton, kerseymeres, woollens, &c. *Pop.* 11,758. —Wallenstein was assassinated here in 1644.

Egerdir, (*ai'ger-deer*.) a lake of N. Asia Minor, 15 m. from Isbarta. It is 27 m. long, and 10 broad at its greatest points. At the S. extremity is a town of the same name, Lat. 37° 52' N., Lon. 31° 6' E.

Egeri, (*ai'zher-e*.) a lake of Switzerland, 4 m. from Zug. It is 4 m. long, with a breadth of about 2 at its broadest part.

Egeria, (*ee-jeer'e-a*.) (*Roman Myth.*) A nymph who received divine honors among the Romans. Numa pretended to have secret conversations with her, and to receive from her the laws which he gave to the Romans. Some say *E.* was the wife of Numa.

Egest', v. a. [From Lat. *e*, out, and *gerere*, to carry.] To throw out; to void, as excrement. (R.)

Egesta, n. [Lat.] (*Med.*) A term for whatever is discharged from the body as waste; — the opposite of *ingesta*.

Egestion, n. [Lat. *egestio*.] The act of voiding digested matter.

Egg, n. [Sax. *aeg*; Dan. and Ger. *ei*; Dan. *aeg*; Icel. *egg*; W. *ay*; Swab. *ai*; Sw. *egg*; Lat. *ovum*; Gr. *oon*; Fr. *œuf*; It. *ovo*; Goth. *adda*; Hind. *unda*; Sans. *anda*, an egg. The root of Lat. *ovum*, Gr. *oon*, &c., is the Sans. *vi*, a bird.] A roundish body produced by the females of birds and certain other animals, containing the substance from which a like animal is produced; anything shaped like an egg.

(*Zoöl.* and *Chem.*) Those animals in which reproduction takes place by means of eggs are called oviparous. The marsupial quadrupeds and the mono-tremata form the connecting link between the warm-blooded animals which are oviparous and the truly viviparous animals, which only belong to the mammalia. The number of eggs produced varies greatly in different animals; some

inner membranous coating weigh 93.7 grains; the albumen, or white, 529.8 grains; and the yolk 251.8 grains. The shell contains about two per cent. of animal matter, and one per cent. of the phosphates of lime and magnesia, the rest consisting of carbonate of lime, with a trace of carbonate of magnesia. — See ALBUMEN.

Egg, v. a. [A. S. *eggian*.] To incite; to instigate; to provoke to action. (R.)

Egga, a town of Guinea, on the banks of the Niger, abt. 75 m. from its junction with the Tchadda; Lat. 10° 42' N., Lon. 6° 40' E. It is said to be so populous, that many of its inhabitants live on the river in canoes.

Egg and Tongue, n. (*Arch.*) Ornaments used in the Echinus, q. v.

Egg-apple, n. (*Bot.*) See SOLANUM.

Egg-bird, n. (*Zoöl.*) See STERNA.

Egg-cup, n. A cup used to hold an egg to be eaten at table.

Eggebe', a town of W. Africa, 80 m. from Kano; Lat. 10° 52' N., Lon. 9° 6' E.; *pop.* 15,400.

Egger, n. One who eggs or incites. — A gatherer of eggs.

Eggertsville, in New Jersey, a post-office of Erie co.

Eggery, n. A nest of eggs. (R.)

Egg-hot, n. A posset made of eggs, ale, brandy, and sugar.

Egg Harbor, in New Jersey, a township of Atlantic co., bordering on the Atlantic Ocean and Great Egg Harbor Bay. Contains EGG HARBOR CITY, a prosperous place surrounded by numerous vineyards; wines are largely produced. *Pop.* of township (1897) about 1,600.

Egg Harbor, in Wisconsin, a post-township of Door co., on the S. E. shore of Green Bay.

Egging, n. Incitement.

Egg Island Point, in New Jersey, a light-house on the S. extremity of Egg Island, in Delaware Bay. It exhibits a fixed light 40 feet above the sea-level. Lat. 39° 10' 24" N., Lon. 75° 9' W.

Eggler, n. A dealer in eggs.

Eggleston, in Michigan, a township of Muskegon county.

Eggleston, in Virginia, a post-office of Giles co.; formerly called EGGLESTON SPRINGS.

Egg-nog, n. A kind of drink made of spirits, milk, sugar, and eggs, beaten up together.

Egg-plant, n. Same as egg-apple. See SOLANUM.

Egg-shell, n. The shell or crust of an egg.

Egg-squash, n. (*Bot.*) See CUCURBITA.

Egholm, a small island of Denmark, in the Little Belt, 4 m. from the island of Eroe.

Egilops, n. (*Med.*) See EGILOPS.

Egina, an island of Greece. See EGINA.

Eginhard. See EGINARD.

Egis. See EGIS.

Eglandulose, or EGLANDULOUS, a. [Lat. *e*, out, and *glandulosus*, q. v.] Destitute of glands.

Eglantine, n. [Fr. *églantier*, *églantine*; Du. *egelan-tier*, from *egel*, a hedge-hog, probably from *heg*, a hedge.] (*Bot.*) The sweetbrier, a species of plants, gen. *Rosa*, q. v.

Eglomerate, v. a. [Lat. *e*, out, and *glomerare*, *glomeratum*. See GLOMERATE.] To unwind, as thread from a ball.

Eglon, a king of Moab, who, with the help of Ammon and Amalek, subdued the southern and eastern tribes of the Jews. He made Jericho his seat of government, and held his power eighteen years, but was then slain by Ehud, and his people expelled. (*Judg.* iii. 12-33.)

Egmont, LAMORAL, COUNT OF, a distinguished nobleman of Flanders, was b. in 1522, and served in the armies of Charles V. with great reputation. He was made general of horse by Philip II., and distinguished himself at the battle of St. Quentin in 1557. But the Duke of Alva, on the pretence that he meditated designs in favor of the Prince of Orange, caused him, together with Count Horn, to be beheaded at Brussels, in 1568.

Egmont Bay, an inlet of the Gulf of St. Lawrence, on the S.W. coast of Prince Edward's Island; Lat. 46° 34' N., Lon. 64° E.

Egmont Island, NEW GUERNSEY, or SANTA CRUZ, one of the Queen Charlotte Islands, in the S. Pacific Ocean; Lat. 10° 46' S., Lon. 165° 30' E. It is 20 m. long, by 10 broad.

Egmont Key, in Florida, a light-house at the entrance of Tampa Bay. It is on a small island of the same name, and shows a fixed light 40 feet above the sea-level. Lat. 27° 36' N., Lon. 82° 45' W.

Egmont, (*Mount*.) an active volcano of N. Island, New Zealand, nearly 9,000 feet above the sea; Lat. 39° 15' S., Lon. 174° 13' E.

Ego's Islands. THE CAROLINE ISLANDS, q. v.

Egoism, n. [Lat. *ego*, I; Gr. *egō*; Sansk. *aham*.] The opinion of the egoists. — A passionate love of self, leading a man to refer everything to himself as the centre.

Egoist, n. [From Lat. *ego*, I.] (*Phil.*) A name given to certain followers of Des Cartes, who held the opinion that they were uncertain of everything except their own existence, and the operations and ideas of their own minds.

Egoistic, or EGOISTIC, a. Belonging or relating to egoism.

Egoistically, adv. In an egoistical manner.

Egoity, n. Personality; individuality. (R.)

Egomism, n. Egotism. (R.)

Egomony, n. [Gr. *aiz*, *aigos*, goat, and *phone*, voice.] (*Med.*) The kind of resonance of the voice heard through the stethoscope when we examine the chest of one laboring under moderate effusion into one of the pleurae.

Egota, or EGEOTA, in Minnesota, a former township of Olmstead co.

Egotheism, n. [Gr. *ego*, and *theos*, God.] The deification of self.

Egotism, n. [Fr. *égoïsme*, from Lat. *ego*, I.] The practice of too frequently using the word I; an exaggerated love of self, leading to self-exaltation; self-commendation.

Egotist, n. One who repeats the word I very often in conversation or writing; one who speaks much of himself, or magnifies his own achievements.

Egotistic, or EGOISTIC, a. Addicted to egotism; conceited; vain; self-important; containing egotism.

Egotistically, adv. In an egotistic manner.

Egotize, v. a. To talk or write much of one's self; to make pretensions to self-importance.

Egregious, a. [Lat. *egregius* — *e*, ex, and *grex*, gregis, a flock or herd. See GREGARIOUS.] Distinguished; surpassing; eminent; standing out with remarkable prominence; extraordinary; remarkable; singular; monstrous; enormous; — generally used in a bad sense; as, "egregious impudence."

Egregiously, adv. Greatly; enormously; shamefully.

Egregiousness, n. State of being egregious.

Egremont, in Massachusetts, a township of Berkshire co., about 120 m. W. by S. of Boston; *pop.* about 1,460.

Egress, n. [Lat. *egressus*, from *egredior* — *e*, ex, and *gradior*, to go. See GRADE.] Act of going or issuing out, or the power of departing from any inclosed or confined place; exit; departure; issue.

(*Astron.*) The passing off of a planet from the sun's disc.

Egres'sion, n. [Lat. *egressio*.] Act of going out from any inclosure or place of confinement.

Egges'sor, n. [From Lat. *egredi*.] One who goes out. (R.)

Egret, n. See AIGRETTE.

Egrette, n. An ornament. See AIGRETTE.

Egriote, n. [Fr. *aigriote*, from *aigre*, sour.] A species of acid cherry.

Egypt, [the *Mizraim* of the Hebrews, and *Aigyp'tos* of the Greeks.] A country on both banks of the Nile, occupying the N.E. angle of the African continent; one of the earliest seats of art, science, and literature, and famous alike for the historical events of which it has been the theatre, its magnificent monuments, and physical characteristics. It is bounded N. by the Mediterranean, E. by the Red Sea and the Isthmus of Suez, S. by Nubia, and W. by the deserts to the E. of Fezzan, lying from Lat. 24° 6' to 31° 36' N. From Cape Bourlos, on the coast, to Philæ, its S. limit, the distance is about 452 geographical, or 520 English miles. The breadth of the Egyptian coast is 160 m.; but in ascending to Cairo (104 m. from Cape Bourlos), the cultivated tract tapers off to a point, and the rest of the country is chiefly comprised in the narrow valley of the Nile; which, however, at Beni-touf, 85 m. higher, spreads to the W. to form the vale of Faioum, a circular valley of great fertility and beauty, measuring about 40 m. from E. to W., and 30 m. from N. to S. Thence to Syene, the valley of the Nile is mostly confined within very narrow limits. The Nile, so important among the great rivers of the world, is also the most striking object in the general aspect of a country which not only is wholly comprised within the sphere of its influence, but is entirely indebted to it for existence. (See NILE.) The mountain system of E. is very peculiar. Two ranges, pressing closely on each bank of the river, extend from Syene to Cairo, and form the valley of the Nile, protecting it from the ravages of the deserts on either side. That to the E. gives out an arm at Kenek (Lat. 26° 12'), and bisects the desert to the Red Sea at Cosseir in nearly the same latitude; while the Libyan, or W. range, branches off from Assouan to the Great Oasis. The general components of the hills are chiefly granite, and a peculiar highly crystallized red formation called Syenite marble. This primitive rock is remarkable for durability, and the fine polish it is capable of receiving. From quarries of this stone the Pharaohs, Ptolemies, and Antonines drew materials not only for the stupendous monuments which still make Egypt a land of wonders, but also for many of the public buildings of Italy. — The most considerable of the Egyptian lakes are those of Menzaleh, Bourlos, Etke, and Maraotis, lying along the shore of the Delta. There is also a considerable lake occupying the N.W. part of the valley of Faioum. The whole of the Delta is intersected with canals in every direction, in which the overflows of the Nile are preserved after the inundations, to afford communication between the various towns, and to keep a constant supply for the irrigation of the cultivated lands. — E. is naturally divided into— 1. *The Delta*, or Lower Egypt, which derived its name from the similarity of its figure with the Greek Δ , and is a triangular tract, formed by the bifurcation of the Nile. The soil consists of the mud of the river, resting upon desert sand. The greatest length of the Delta is at present about 85 m. from E. to W., and from the fork of the Nile to the sea about 90 m. intervene. It is covered with meadows, plantations, and orchards, and presents a more fertile aspect than any other part of the country. This district, from its comparatively low situation, is more influenced by the inundation than the upper lands; and when the river is at its greatest height, it presents the aspect of an extensive marsh. 2. *The Valley of the Nile of Central and Upper Egypt*. Ascending the river from its fork, the cultivatable land at the apex of the Delta is found to decrease. The space left between the two ridges, E. and W., seldom exceeds 10 m. in Central E., while in the Upper country they press even more closely upon the sides of the river; thus that part of the valley of the Nile which belongs to E. has but a contracted breadth, and even that is not all available for the labors of the husbandman, a great portion of it being, from the height of the banks, out of the reach of the overflows and their beneficent deposits. Between the isle of Philæ and Assouan, the

Fig. 913. — EGGERS IN ICELAND.

birds only produce one egg in a year, while others produce as many as twenty. The roe of some fishes contains myriads of eggs. The eggs deposited by some animals are enveloped in a gelatinous substance; others are connected in various ways, sometimes being in the form of a string. The eggs of a large number of birds are used as articles of food, those most generally used belonging to the class of birds called poultry. The common domestic fowl, the turkey, and the pea-hen, are birds whose eggs are most generally used all over the world. The eggs of gulls and guillemots afford an important article of food to the inhabitants of Iceland and other far northern regions. It is in quest of eggs, as well as of young birds, that the dangers of the most tremendous precipices are braved by men whom their companions let down by ropes, and who gather the eggs from the rock ledges. The coasts of Labrador are also visited by eggers, who collect the eggs of sea-birds, and carry them for sale to some of the American ports. Although the eggs of birds are principally eaten, the eggs of the turtle are also considered a luxury; and the eggs of fresh-water tortoises are valuable for the oil which they yield. An ordinary hen's egg has an average weight of 875 grains, of which the shell and its

current of the Nile is interrupted by innumerable islands. Among them, the isle of Elephantine, opposite to Assouan, wears so beautiful an aspect that it is called by the natives "the isle of flowers;" and most European travellers describe it as a sort of terrestrial paradise. The Egyptian valley is strewn with those

Fig. 914.—STATUES OF MEMNON.
(In the plain of Thebes.)

stupendous monuments of human labor, those beautiful remains of ancient art, which have excited the wonder and admiration of ages. 3. *The Desert East of the Nile* is broken by rugged mountains, and intersected by numerous wadys or ravines, sometimes thickly, but more frequently scantily, clothed with verdure. It has, however, the advantage of numerous springs; besides which are traced ancient caravan tracks, that are still traversed in exactly the same manner as when the "company of merchants" found Joseph in the pit. The leading characteristic of the Desert is its gradual ascent from the Nile to a certain distance *E.*, where commences a plain nearly level, from which all the torrents running in a *W.* direction empty themselves into the Nile, and those to the *E.* into the Red Sea. The whole of the desert of *E.* is the resort of distinct tribes of Arabs, who confine themselves to particular localities; they consist of the Maazy, occupying the country to the east of Benisouef, Atouni, and Benihasel, *S.* of the Maazy and the Abaddie Arabs, who are scattered over the *N.* part of the desert, and breed camels for the market of Esneh. 4. *The Desert West of Egypt* presents a scene so formidable to travellers, that few have visited the *Oases* by which it is here and there interspersed. They, no doubt, owe their origin to the springs with which they abound, the decay of the vegetation thence arising having produced the soil by which they are now covered. Their fertility has been deservedly celebrated; but the glowing eulogiums of travellers on their surpassing beauty are probably, in a great measure, to be ascribed to the striking contrast they present to the surrounding deserts of arid, burning sand. — *Climate.* Extremely hot, generally uniform, and remarkably dry. When a few drops of rain fall, they are viewed by the inhabitants almost as a miracle. In Lower Egypt, the latest observations give 13 days of rain in a year. Thunder and lightning are nearly equally infrequent. The prevalent winds are from the *N.*, and continue from May to September, and from November to February. At intervals during the spring, for about fifty days, *E.* is liable to the terrible wind of the desert, the *simoom*, which, from its intense heat and dryness, threatens, when long continued, almost the extinction of animal life; fortunately, however, it seldom lasts above three days. The heat of the climate, combined with the filthy habits of the people, is considered favorable to the ravages of the plague, which is supposed to be indigenous, whilst ophthalmia, another severe disease, is also peculiar to *E.* — *Zoöl.* The wild animals are tigers, hyenas, canels, antelopes, apes, dromedaries, horses, large asses, crocodiles, hippopotami, the chameleon, and a kind of rat, called ichneumon. The birds are—ostriches, eagles, hawks, pelicans, waterfowls of all kinds, and the ibis, which resembles a duck, and was deified by the ancient Egyptians, on account of its destroying serpents and noxious insects. Among the reptiles is a serpent, called the cerastes, or horned viper, the bite of which is fatal to those who have not the secret of guarding against it. — *Minerals.* No metals; but marble, salt, natron, saltpetre, and red granite. Emeralds are found in the mountains on the shores of the Red Sea. — *Productive Industry.* No soil can be better adapted for agriculture than that brought down by the Nile, and deposited on its banks. The earliest authentic records of the human race represent *E.* as the granary of the old world, to which less fortunate nations resorted in times of scarcity. The husbandry of *E.* is divided into 2 great classes:—the upper, or *sharakee* lands, where the banks are too high for the country beyond them to benefit by the inundation; and the *rei*, or low lands, which are watered by the natural overflowings of the river. About 4,000,000 of *feddâns* (a measure of 3,208,000 sq. yards) are now under cultivation in *E.*, of which about 300,000

are occupied with cotton; 100,000 with flax, indigo, sugar, dates, hemp, &c., and the rest with millet, maize, wheat, and rice. The efforts of the present government have been principally directed to the culture of cotton, so that the crops of wheat have greatly fallen off, and Alexandria has almost ceased to be a port for shipment of this kind of grain. The cotton of *E.* is mixed staple, of good quality, and the soil is well suited to its growth. By far the largest amount of this product is exported to Great Britain. In 1861, the exportation amounted to 40,892,096 lbs.; it rose to 93,552,368 lbs. in 1863; to 125,493,648 lbs. in 1864; and to 176,838,144 lbs. in 1865. The shipments temporarily declined after 1866, owing to the restoration of peace in this country, but again increased, and now average nearly 500,000,000 lbs. annually.—*Commerce.* Egypt is well situated for commerce. She forms the link that connects the Eastern and Western worlds; and it is to her admirable situation in this respect, and to the commerce of which she in consequence became the centre, that her ancient wealth and civilization are mainly to be ascribed. The ruin of commerce, in modern times, ought to be traced to the subjection of the country to the lawless and arbitrary dominion of the Mamelukes, who loaded all articles passing through *E.* with oppressive exactions; and to the discovery of the route to India by the Cape of Good Hope. But a new era has begun; the intercourse with the East has already in part reverted to its old channel, and the comparatively recent opening of the famous canal which now connects the Red Sea and the Mediterranean, may restore *E.* to its ancient state of prosperity and civilization. See ALEXANDRIA, and SUEZ (CANAL OF). — *Govt. and Laws.* *E.*, whose history commences with the history of civilized man and organized government, which gave laws to the old world and art to the Greeks, after being for many centuries subjected to foreign masters, became, at length, a prov. of the Ottoman empire. Under the Turkish sway it was long her fate to suffer that worst kind of despotism resulting from the delegation of arbitrary power by a careless tyrannical master to a scarcely responsible servant. The bold, innovating spirit of the first independent ruler of *E.*, the celebrated Mehemet Ali, has, however, introduced several reforms into the administrative constitution of the government, which have been upon the whole beneficial. The government of Egypt, as at present organized, consists of—1st, an hereditary *khedive* (the Arabic equivalent of king, subject to an annual tribute to the Sultan, of \$3,426,540); 2d, his deputy, called *kikhyia*; 3d, seven councils of state; 4th, governors (*nazir*) appointed to each province. The country is divided into 3 great provinces, viz.:—*Said*, or Upper *E.*; *Vostani*, or Middle *E.*; and *Bahari*, or Lower *E.* Those prov. are again divided into 7 intendancies, and subdivided, after the French system, into dep. and arrondissements. In other respects, the successors of Mehemet Ali have tried to imitate the forms of government of Imperial France. The Khedive, or Pasha, was, with some few exceptions, proprietor of all the land of *E.*; and he, in fact, the only considerable agriculturist, manufacturer, and trader in the country. He specified the employment in which the bulk of the population should engage, the crops or produce they were to raise or furnish, and the price at which, when produced, they were to deliver them to his agents. It must be admitted, notwithstanding the grinding oppressiveness of this system, that it has materially improved the agriculture of the country. But the vice of the system is, that the fellahs (cultivators) reap no advantage whatever from increase of production. Their increased labor, instead of bringing with it an increase of comfort, brings only an increase of privation. This system could last to the present time only owing to the exceedingly primitive and scanty needs of the people, which explains the facility with which enormous taxes, exacted by the Khedive, have been paid. The food, clothing, and homes of the fellah cost next to nothing. Of late, however, a marked improvement has taken place in the homes and the whole standard of comfort of the fellah, and the general condition of the Egyptian people will, it is to be hoped, be materially benefited by the English, who became virtually masters of this country by their defeat of Arabi Pasha (who had headed a rebellion against the Khedive), at Tel-el-Kebir, Sept. 13, 1882, his subsequent capture and banishment. Alexandria was bombarded and taken by the English July 11, 1882, and Cairo, the capital, occupied by them in September following.—*Inhabitants.* These are composed of four different races, consisting of Copts, Arabs, Turks, and, till 1811, Mamelukes. The Copts are the original race, and appear to be descendants of the most ancient inhabitants of Egypt, mingled in some degree with Persians and Greeks. The Arabs are the descendants of the Saracen conquerors, and are now the most numerous inhabitants of Egypt. The Turks have always been established, to a considerable extent, in the great cities; and the Jews are also numerous in the commercial cities, and are oppressed and persecuted, though never extirpated. The Mamelukes consisted of Georgians and Circassian slaves, who, under the Fatimite khalfs, were brought into the country, and being intrusted with arms, rose against their masters, whom they massacred or expelled, and thus assumed the dominion of Egypt, which they transmitted to new bands brought into the country. They were rather the plunderers than the rulers of Egypt. Their strength being broken by the defeats experienced during the invasion of the French, the Pasha, Mehemet Ali, conceived a plan for their destruction; and having invited their chiefs to a feast, treacherously massacred the greater part of them, in 1811. Those who escaped fled

to Upper Egypt, and were finally driven to establish themselves at Dongola. The complexion of the Egyptians is tawny, and as we proceed southward, they become darker, until those near Nubia are almost black. They are generally indolent and cowardly. *E.* had, in

Fig. 915.—EGYPTIAN GIRL.

1897, a population of about 7,000,000, and there were over 1,250 miles of railway and 5,000 miles of telegraph. (*Hist.*) The early history of Egypt is involved in obscurity. The ancient kings governed it till Cambyzes became master of it, 525 years B. C.; and in their time all those wonderful structures were raised, and works perfected, which we cannot behold without astonishment. These are the pyramids, the labyrinth, the immense grottoes of the Thebais, the obelisks, temples, and pompous palaces; the lake Moeris, and the vast canals, which served both for trade and to render the land fruitful. The country continued under the Persian yoke till the time of Alexander the Great, who, having conquered Persia, built the city of Alexandria. He was succeeded by Ptolemy, the son of Lagos, 323 years B. C. Ten kings of that name succeeded each other, till Cleopatra, the sister of the last Ptolemy, ascended the throne; when Egypt became a Roman province, and continued so till the reign of Omar, the second caliph of the successors of Mahomet, who drove out the Romans, after it had been in their hands 700 years. When the power of the caliphs declined, Saladin, in 1171, set up the order of the Mamelukes, who usurped the sovereign power in 1260, and extended their dominions over a great part of Africa, Syria, and Arabia. At the commencement of the 16th century, Selim, a Turkish emperor, conquered it, and for many years it was distracted by the civil wars between the different contending beys by which its provinces were governed. The famous Hassan Ali, the Turkish admiral, gained several victories over them in 1786; but though he repressed, he could not totally subdue them. The French invaded

Fig. 916.—ISMAEL PASHA.

Egypt in 1798, under General Bonaparte, and evacuated the country in 1802. In 1811, Mehemet Ali became master of Egypt by the massacre of the Mamelukes; and under his sway, it progressed rapidly in civilization. He considerably extended his boundaries, and by the treaty of London (1841) was made viceroy of Egypt, as a fief of the Ottoman empire. The independent position of the rulers of Egypt was much enlarged in 1867, by an imperial firman which established the succession of the descendants of Mehemet Ali, under the title of Khedive, or King. Still greater powers were granted in 1872, and in 1874-75 Ismail Pasha, the then ruler, greatly extended the Egyptian territory, annexing the Soudan to Darfur and finally to the shores of Victoria Nyanza. The finances of the country became so involved that they were placed under European manage-

EGYPTIAN ARCHITECTURE.

1. Small Temple on Heights of Denderah. 2. Ideal restoration of temple at Beni-Hassan and Karnak. 8. Capital from Philæ. 9. Calyx capital, Karnak.

3. Pyramids of Cheops, Chephren, and Mencheres near Gizeh, with the Sphinx. 4. Temple on Island of Elephantine. 5, 6, 7. Lotus capital from Denderah. 11. Palm capital from Esneh. 12. Corner and moulding of a temple cornice.

ment and the country under English and French control. Ismail in 1879 was forced to abdicate and was succeeded by his son Tewfik. A revolt, under Arabi Pasha, of those opposed to European influence, succeeded. It was suppressed by the British army and navy, the French taking no part. In consequence, the dual control ended; and since then Great Britain has been the practical ruler of Egypt, despite the occasional protest of France and other European powers. About 1880 a serious revolt began in the Soudan, under the leadership of the Mahdi, a pretended prophet. Efforts to suppress it proved unavailing; in 1883 an army under Hicks Pasha was totally routed, other officers were defeated, and Khartoum, which was held by Gen. Gordon, was taken and that gallant officer killed. By these operations Egypt lost the whole of the Soudan, except the equatorial province, held by Emin Pasha till 1888, when he was rescued from his dangerous position by the explorer Stanley. In 1892 Tewfik died and was succeeded as Khedive by his eldest son, Abbas, the British control continuing. In 1896 an expedition for the reconquest of the Soudan set out, under British leadership; Dongola was taken in September, the dervish forces were defeated in several engagements, and the indications favor a recovery of all the lost provinces.

Egyptian Architecture. (*ejip'shān*, *n.*) The architecture of Egypt is the oldest in the world, and in its colossal proportions, massive structure, general magnificence and grandeur of conception, is superior to that of any other country, Assyria alone excepted. Its leading characteristic is a massive solidity that seems to have destined it to endure for all time. Its type was cavern excavation. When we consider the vast period of time that has elapsed since their erection, the preservation of the Egyptian monuments of architecture, in many instances so perfect as they still appear, is calculated to excite our surprise and admiration. The circumstances of its subsequent history, and its geographical surroundings, doubtless were favorable to their preservation; for had the country received as successors to its early inhabitants a powerful people,—if rich and industrious cities had arisen on the sites of the old ones,—the temples of Egypt would doubtless have been used as quarries, admirably suited to the purpose; but independent of these considerations, the materials used in their construction and their peculiar form and proportions are well calculated to defy the tooth of time and the hand of violence. The earliest specimens of E. A. that yet remain to us, and which will probably endure as long as the world lasts, are the Pyramids (*q. v.*) and the monumental records known as obelisks (*q. v.*); but to ascertain the efficiency they had attained in this art, we must go to the temples of Karnak, Edfon, Denderah, and that of Abou-Sambul, hewn out of the solid rock, as well as the architectural remains that still exist at Thebes, and other ancient cities of Egypt. The Pyramids are buildings of great solidity, but of simple

Fig. 917.—STATUE 60 FEET HIGH.
(Temple of Abou-Sambul.)

tween 1500 and 1000 B. C. The obelisks are four-sided shafts of great size, terminating in a pyramidal top. They are hewn out of a solid block of stone, and are elaborately carved with hieroglyphics. The temples cover a great space of ground, and stand in a walled enclosure. Before the temple itself there is a large square court, surrounded on three sides by a colonnade. Access is obtained to this court through a doorway of great height, flanked on each side by quadrilateral towers, diminishing in size as they approach the top. The doorway and side-towers are adorned with colossal sculptured figures, and in some cases an avenue of figures, generally sphinxes, was made, leading directly to the door we have mentioned. The temple itself was generally raised, the court between it and the grand entrance being composed of a series of broad steps, rising in a gradual slope. These steps led to a magnificent hall or portico, occupying nearly the entire width of the court, in which there are generally six rows of pillars, which support the flat and massive roof. Passing through a series of chambers, each narrower than the one before it, we gain the innermost chamber, or shrine; in which the statue of the divinity was placed, to whose worship the temple was dedicated. Many of these temples were of immense size. The length of the temple at Karnak is about 1,200 feet, its breadth about 360 feet, and its great portico or hall is 338 ft. long by 170 broad. Excepting some varieties in the places of their temples, a sameness of character and uniformity is observable in their fronts, their general forms, and the details of their decorations. Heaviness seemed to be synonymous with strength, height with grandeur, and size or mass with power. Uniformity of plan is universal. The right line and square was never abandoned, and it is said there exists no circular monument in this style. The columns, entablatures, and moldings are the great distinctive features of Egyptian architecture, in addition to the marked peculiarity that their doors and windows, and even the buildings themselves present; namely, the convergence of the sides; so that the breadth at the base is greatly diminished at the summit. The size of the columns is in proportion to the size of the building in which they are placed. At Karnak they are 9 and 11 feet in diameter. All are elaborately sculptured. The shaft stands generally on a circular base, and sometimes on a base that contracts in size as it approaches the floor of the building, instead of expanding from its junction with the shaft, as is usually the case. The capitals are sometimes bell-shaped, and adorned with lotus-leaves, while others are square in form, with a human face sculptured on each side. In some cases, as at Deuderah, this capital is surmounted by another, also quadrilateral in shape, and enriched with carving. The entablature was very massive and heavy, consisting of an architrave surmounted by a bold and deeply-moulded cornice, the upper part of which projected considerably beyond the face of the walls of the building. The roof was perfectly flat. The doorways are surrounded by a flat moulding, and surmounted by a cornice and lintel of great depth. Figures attached to the walls were generally executed in *alto-relievo*, like those that flank the doorways of the Assyrian palaces; but the hieroglyphics and representations of historical events were carved in low relief, in a style peculiar to Egyptian sculpture, known as *caro-relievo*. (See *CARTOUCH*.) The walls were adorned with paintings; in red, blue, green, black, and yellow on a white ground; gilding was also used as an embellishment, and the sculptured columns and ceilings were also painted. The dwellings of the Egyptians seem to have been built of brick, and consisted of rooms ranged around a central court planted with trees, and having a fountain in the centre. They were sometimes two and three stories high. The method of forming arched doorways and vaulted passages was known to the Egyptians, but was seldom resorted to, and then principally in the construction of tombs. In the construction of their edifices there must have been considerable mechanical knowledge employed, for some of the blocks of stone were of enormous dimensions. The walls of some of their temples extend to the thickness of 24 feet, and the walls to the principal entrance of the gate at Thebes are at their base not less than fifty feet in thickness. The stones are all squared inside, as well as on the external face; no rubble work is to be seen—another cause of the surprising durability of their monuments.

Egypt Mills, in *Missouri*, a post-office of Cape Girardeau co.

Egypt Mills, in *Pennsylvania*, a post-office of Pike co. **Eh**, *interj.* Denoting inquiry, or slight surprise; eigh. See *EIGH*.

Ehingen, a town of *Württemberg*, on the Danube, 10 m. from Ulm. *Manuf.* Chiefly cotton goods. *Pop.* 4,000. **Ehingen**, a town of *Württemberg*, 15 m. from Stuttgart; *pop.* 7,000.

Ehrenberg, CHRISTIAN GOTTFRIED, (*air'en-bairg*), a distinguished German microscopist and naturalist, who made several scientific expeditions into various parts of the globe, among which may be noticed one with Humboldt into the Ural, and also the Altai Mountains. He wrote largely on his favorite pursuits, and investigated the fossil forms of microscopic organic beings with success. B. at Delitzsch, in Prussian Saxony, 1795. D. 1876.

Ehrenbreitstein, (*air'en-brite'stine*). See *COLENTZ*.

Ehretia, *cear*, *n. pl.* (*Bot.*) An order of plants, alliance *Echiales*. *DIAG.* Regular symmetrical flowers; 5 stamens; 4 confluent nits; a naked stigma, and circinate inflorescence.—They are trees, or shrubs, or herbaceous plants, only separated from the *Boraginaceæ*, *q. v.*, by their concrete carpels, and the presence of a small quantity of albumen. Most of them are tropical trees or shrubs. Some Ehretians bear eatable drupers; and the

delicious odor of the Peruvian Heliotrope is known to everybody. There are 297 species in 14 genera.

Ehud, a judge of Israel, who slew Eglon, king of Moab.

E. I., an abbreviation for East Indies.

Eichhorn, JOHANN GOTTFRIED, (*ike'horn*), a German professor of Oriental and Biblical Literature in the university of Göttingen, B. 1752, at Dorrenzimmern. He filled several important posts, and in 1819 was appointed privy councillor of justice for the kingdom of Hanover. His writings, illustrative of Oriental literature, are numerous, and procured for him a reputation of being among the most learned and distinguished scholars of Germany. D. 1827.

Eichstadt, (*ike'stat*), a town of Bavaria, on the Altmühl, 30 m. from Angsburg. *Manuf.* Woollens, &c. *Pop.* 8,478.

Eider, or **Eider-duck**, *n.* [*Ger. eider*.] (*Zoöl.*) See *SOMATERIA*.

Eider, a river of Denmark, forming the boundary-line between Schleswig on the N., and Holstein on the S. It is navigable as far as Rendsburg, and enters the North Sea at Fönnig, after a course of abt. 90 m.

Eider-down, *n.* The soft and light down of the eider-duck. See *SOMATERIA*.

Eidograph, *n.* [*Gr. eidos*, form, and *graphō*, to write.] An instrument to copy drawings or designs.

Eidouranion, *n.* [*Gr. eidos*, form, and *ouranion*, heaven.] A representation of the heavens.

Eigh, (*āh*), *interj.* An expression of sudden delight.

Eight, (*āt*), *a.* [*Sax. eahta*; *Ger. acht*; O. *Ger. ahto*; *Icel. atta*; *Dan. aatte*; *Goth. ah'au*; *Lat. octo*; *Gr. okto*; *Sansk. ashtan*; *Pers. hasht*; *Hind. husht*.] Twice four; seven and one.

Eight Brothers, (*Isles of*.) See *BABELMANDEB*.

Eighteen, *a.* [*A. S. eahta*, and *tyr, ten*.] Eight and ten united; twice nine.

—*n.* A mark noting eighteen units, as xviii.

Eighteenmo, *n.* [*Eighteen*, and last syllable of *Lat. decimo*.] Denoting the size of a book, in which a sheet is folded into eighteen leaves.

Eighteenth, *a.* Next in order after the seventeenth; noting one of eighteen parts into which anything is divided.

—*n.* (*Mus.*) An interval comprising two octaves and a fourth; the replicate of the eleventh.

Eighteen Mile, in *S. Carolina*, a P. O. of Pickens dist. **Eighteen Mile Creek**, in *S. Carolina*, enters the Kiowee a few m. S.W. of Pendleton.

Eight-foil, *n.* (*Hor.*) A grass having eight leaves, as the trefoil has three. It is used as a difference of the 9th branch of a family.

Eightfold, *a.* Eight times the number or quantity.

Eighth, *a.* Noting the number eight; the ordinal of eight.

—*n.* (*Mus.*) The interval between a note and its octave; an interval of seven conjunct degrees, that is, of five tones and two semitones.—The eighth force of the diatonic scale.

Eightiethly, *adv.* In the eighth place.

Eightieth, *a.* The eighth tenth; next in order to the seventy-ninth.

Eight Mile, in *Ohio*, a post-office of Hamilton co.

Eight-score, *a. and n.* Eight times twenty; one hundred and sixty.

Eigh'ty, *a. and n.* [*Sax. eahta-tig*.] Eight times ten; fourscore.

Eigne, (*ā'ne*), *n.* [*Fr. aine*.] An old legal word for eldest, or first-born.

Eikon, *n.* [*Gr. eikon*, statue.] (*Sculpt.*) An image; a statue.

Eilenburg, a town of the Prussian States, prov. Saxony, is situated on an island of the River Mulde, 26 m. E.N.E. of Merseburg. It is reached by two bridges, and is surrounded by walls and ditches. *Manuf.* Calico, woollen yarn, tobacco, starch, vinegar, and brandy. *Pop.* 11,428.

Einbeck, or **Einbeck**, a town of Hanover, on the Ilme, 40 m. S.S.E. of Hanover. It was, in the 15th century, a place of great importance. *Pop.* 5,600.

El'meo, one of the Society Islands, in the Pacific Ocean, Lat. 17° 30' S., Lon. 150° 10' W., about 30 m. W.N.W. of Tahiti. It measures 9 m. by 5. *Pop.* about 1,200.

El'rie, *n.* See *AERIE*.

Eisenach, (*isen-ak*), a town of Germany, Saxe-Weimar, 45 m. W. from Weimar. *Manuf.* Woollen, cotton, and linen goods, meerschaum pipe-bowls, carpets, &c. *Pop.* 12,000.—In its neighborhood is the castle of Wartburg, formerly the residence of the landgraves of Thuringia. Between 1521 and 1522 Luther passed ten months' imprisonment in this abode, under the friendly arrest of the elector of Saxony, and called it his "Paros."

Eisenberg, (*isen-bairg*), a town of Germany, duchy of Saxe-Altenburg, 26 m. E. of Weimar. *Manuf.* Woollens and porcelain. *Pop.* 6,211.

Eisenstadt, a free town of E. Hungary, 12 m. N.N.W. of Oedenburg. In the suburbs is a conservatory, one of the largest in Europe, containing 70,000 specimens of exotic plants. *Pop.* 6,434.

Eisleben, (*isle-ben*), a town of Prussian Saxony, 24 m. from Merseburg. *Manuf.* Linen goods, and in its vicinity are silver and copper mines. *Pop.* about 11,072. Here Martin Luther was born in 1483, and here he died in 1546. The pulpit in which he preached is still preserved in the church of St. Andrew.

Eisteddfod, (*isteth'rod*). [*W. eistedd*, to sit.] (*Eng. Hist.*) A name applied to the assemblies of the Welsh bards and minstrels, who anciently formed an hereditary order. These meetings were forbidden by Edward I. at the conquest of Wales, but they were renewed by Henry VII., who was of Welsh origin. They have been again revived during the present century, and E. are held period

Fig. 918.—AVENUE IN THE GREAT HALL OF COLUMNS AT KARNAK, (Thebes.)

ism. They are built on a square base, with four triangular sides, that meet in a common apex. They are supposed to be royal mausoleums, and were built be-

ically at various Welsh towns in succession, at which prizes are awarded for proficiency in the Welsh tongue, and for poems in that language, and playing on the harp.

Ei' ther, *a.* or *pron.* [Sax. *ægher*; Ger. *jeder*; Fris. *eider*, *aider*; Sans. *itara*, the other, generally.] One or another of any number; one of two; each; every one, separately considered.

—*conj.* Or; as, either this or that.

Ejac'ulate, *v. a.* [Lat. *ejaculator*, *ejaculatus*—*e*, *ex*, and *jaculor*, from *jaculum*, a dart, from *jacio*, to throw or cast.] To utter briefly and suddenly, as a short prayer, a cry, &c.

Ejaculation, *n.* [Fr., from L. Lat. *ejaculatio*.] The uttering of a short, sudden expression, cry, or prayer.

Ejaculatory, *a.* [Fr. *ejaculatoire*.] Suddenly darted out; uttered in short sentences; as, *ejaculatory* prayer.

Eject', *v. a.* [Lat. *ejicio*, *ejectum*—*e*, *ex*, and *jacio*, to throw or cast.] To thrust out, as from a place enclosed or confined.—To discharge; to evacuate.—To dismiss from an office; to turn out; to dispossess of land or estate; to drive away; to expel; to reject; to banish.

Ejection, *n.* [Lat. *ejectio*.] Act of casting out; expulsion.—Dismissal from office; dispossession.—Evacuation; vomiting, &c.

Ejectment, *n.* A casting out; a dispossession.

(*Law*.) A writ or action which lies for the recovery of possession of land from which the owner has been ejected, and for trial of title.

Ejector, *n.* [L. Lat.] (*Law*.) One who ejects or dispossesses another of his land.

Ejusdem generis. [Lat.] Of the same kind.

Ekat'erineburg, a town of Asiatic Russia, govt. of Perm, on the E. declivity of the Ural chain, on the Iset, and in the line of the great road leading from Perm to Tobolsk.

Ekat'erinodar, a town of Russia, cap. of the country of the Cossacks of the Black Sea, on the Kuban, Lat. 45° 5' N., Lon. 33° E.; *pop.* about 10,000.

Ekat'erinograd, a town and fortress in the S. of Russia, govt. of Caucasus, on the Terek, Lat. 43° 40' N., Lon. 44° 3' E.

Ekat'erinoslav, a fortified town of S. Russia, cap. of a govt. of same name, on the right bank of the Dnieper, 250 m. N.E. from Odessa; Lat. 48° 27' N., Lon. 35° 5' E. In the vicinity is a ruined palace, formerly the residence of Prince Potemkin.

Eke, *v. a.* [Sax. *ecan*, *æcan*, to increase, to add; Lat. *augere*; Gr. *auxo*, *auxano*.] To increase; to augment; to enlarge; to add to; to supply what is wanted; to enlarge by addition; to lengthen; to prolong.

—*adv.* [Sax. *eac*; Ger. *auch*.] In addition; also; likewise.

—*n.* An addition. (*R.*)

Ekebergite, *n.* (*Min.*) A massive and sub-fibrous variety of scapolite.

El, [Heb., strength.] One of the names of God, especially in poetry (*Gen.* xxxiii. 18–20). It is very often found in proper names, as Bethel, Daniel, Elijah, &c. Eloi, like Eli, means "my God."

E'la, *n.* Formerly the highest note in the scale of Guido; since proverbially applied to any hyperbolic saying.

Ela, in *Virginia*, a post-office of Scott co.

Elaborate, *v. a.* [Lat. *elaboro*, *elaboratus*—*e*, *ex*, and *laboro*, to labor, *q. v.*] To labor on; to take pains with; to work out; to produce with labor; to improve or refine by successive operations.

—*a.* [Lat. *elaboratus*.] Wrought with labor; finished with great diligence; executed with exactness; labored; studied; high-wrought.

Elaborated, *p. a.* Produced with labor or study; improved.

Elaborately, *adv.* In an elaborate manner; with great labor or study.

Elaborateness, *n.* Quality of being elaborate, or wrought with great labor.

Elaboration, *n.* [Fr., from L. Lat. *elaboratio*.] Act of elaborating; improvement or refinement by successive operations.

(*Physiol.*) The various changes which substances undergo in the acts of assimilation in animals and vegetables.

Elaborative, *a.* Serving or tending to elaborate; working out by successive processes and with care; developing and carefully finishing step by step; as, "the *elaborative* faculty."

Elaborator, *n.* One who elaborates.

Elæagnaceæ, *n.* [Gr. *elaia*, the olive, and *agnos*, chaste, the trees having a resemblance to the olive.] (*Bot.*) The Oleaster family, an ord. of plants, alliance *Amentales*.—*DIAG.* 1-celled ovary, a simple ascending ovule, an inferior radicle, and flowers occasionally perfect or scattered. They are trees or shrubs, usually covered with a leprous scurf. Leaves alternate or opposite, entire, without stipules. Flowers axillary, dioecious, rarely perfect. Sterile flowers, calyx 4-parted, stamens 3, 4, or 8, sessile, anthers 2-celled. Fertile flowers, calyx free, tubular, persistent, limb entire or 2-toothed. Ovary simple, 1-celled. Ovule solitary, stipitate. Stigmas simple subulate, glandular. Fruit achenium, crustaceous, enclosed within the calyx, which becomes succulent and baccate. Seeds ascending. Embryo straight, in thin, fleshy albumen. This family is found in every part of the N. hemisphere, but is comparatively rare S. of the equator. *E.* includes 4 genera and 30 species.—The fruits of several species of the typical gen. *Elæagnus*, *q. v.*

Elæagnus, *n.* (*Bot.*) The typical genus of the ord. *Elæagnaceæ*. They are trees or shrubs cultivated for their silvery foliage. *E. argentea*, the silver-leaved Oleaster, is a beautiful shrub, with reddish branches,

and small, roundish-ovate cartilaginous drupes, found in Missouri, &c. *E. angustifolia*, the Narrow-leaved Oleaster, is a tree of middle size from Europe, cultivated for its beautiful foliage and fine fruit, which, when dried, resembles an oblong plum, with a reddish skin, and a flavor similar to that of a date.

Elæ'is, *n.* (*Bot.*) Same as ELAIS, *q. v.*

Elæocarpus, *n.* [Gr. *elaia*, on olive, and *carpos*, fruit.] (*Bot.*) A genus of plants, ord. *Tiliaceæ*. The Molucca berries, which are frequently made into necklaces in India, are obtained from the species *E. serratus*. The outer portion of the fruit is pulpy, but the undercarp is hard, bony, and beautifully furrowed. The pulp is carefully removed from the berries when they are used as beads.

Elæoden'dron, *n.* [Gr. *elaia*, olive-tree, and *dendron*, tree.] (*Bot.*) A genus of plants, order *Celastraceæ*

Elæolite, *n.* [Fr. *eléolithe*, from Gr. *elaion*, olive-oil, and *lithos*, a stone.] (*Min.*) A massive variety of nepheline.

Elagabalus, or **HELIOGABALUS**, a Roman emperor, B. at Emesa, 204 A. D. His real name was Varius Avitus Bassianus, but having, when a mere child, been appointed high-priest of the Syro-Phœnician sun-god Elagabal, he assumed the name of that deity. Soon after the death of his cousin Caracalla, *E.* was proclaimed emperor by the soldiers, in opposition to the legitimate sovereign, Macrinus, who had become obnoxious to the troops from the severity of his discipline. The rivals met in battle at Antioch in 218 A. D. Macrinus was defeated, and *E.* quietly assumed the purple. His reign, which lasted rather more than three years and nine months, was infamous for the nearly unparalleled debaucheries of every kind in which he indulged. He was murdered in an insurrection of the Praetorians in 222 A. D., and was succeeded by his son, Alexander Severus.

Elah, a valley in which David slew Goliath.—The son and successor of Baasha, king of Israel, B. C. 926. After reigning two years, he was slain, while intoxicated, by Zimri, one of his officers, who succeeded him as king.

Elaidic Acid, *n.* (*Chem.*) An acid derived from elaidine and potassa.

Elaidine, *n.* [Gr. *elaion*, oil.] (*Chem.*) A fatty matter produced by the action of nitric acid upon certain oils, particularly castor-oil.

Ela'is, *n.* [Gr. *elaion*, oil.] (*Bot.*) A genus of plants, ord. *Palmaceæ*. The two species *E. guineensis* and *melanococca* are the Guinea oil-palms, from the fruit of which the vegetable butter called palm-oil is extracted. The fruits are drupaceous, and the oil is found in the sarcocarp. It is of a rich orange-yellow color, and in Europe it is extensively used in the manufacture of candles and soap. In Africa it is used as food by the natives. Being emollient, it is sometimes used in medicine as an embrocation to spasms and bruises. The hard stony putamen of the same fruits yields a limpid oil. Palm wine may be prepared from the juice which flows from the wounded spathes of the two palms.

E'lam. (*Script.*) The region afterwards known as Persia. It was called Elam after a son of Shem (*Gen.* x. 22).

E'lam, in *Pennsylvania*, a post-office of Delaware co.

Elance', *v. a.* [Fr. *élancer*.] To throw out; to shoot out; to dart.

E'land, *n.* (*Zoöl.*) This animal, *Antelope oreas*, considerably the largest of all the antelopes, is known by several different names;—the Impoofoo, Eland, Cape

Fig. 920 — FLAND.
(*Antelope oreas*.)

elk, Canna, or Bastard eland, being among the many terms applied to it. The ordinary *E.* is a large, heavy animal, weighing, at full growth, from 7 cwt. to 9 cwt.; and, contrary to the rule among antelopes in general, is prone to be fat. Its usual size is that of a full-grown

horse, measuring generally a little more than eight feet in length, and standing full five feet at the shoulder. The horns of the male are thick and heavy, and about a foot and a half in length. They are straight till they arrive at about three inches from the tips, where they bend outwards. They are also surrounded by a thick spiral wreath, which becomes indistinct at the points. The horns of the female eland are longer and smaller, and the spiral wreath is often absent. In both sexes the head is long and pointed, the ears large, the neck thick, and in front of the chest is a loose hanging skin or dewlap, with a border of long hair on its margin. A short erect mane of dark brown hair runs from the centre of the forehead to the root of the tail. This mane is directed backwards along the spine, but is reversed on the neck. The tail is more than two feet long, and terminates in a tuft of long black hair. The flesh of the *E.*, according to Dr. Livingstone, is superior to beef.

Ela'uns, *n.* (*Zoöl.*) A genus of birds, order *Falconida* distinguished by having the wings long and pointed and the tail not forked. The White-tailed Hawk, *E. leucurus*, inhabits S. America, and is also found in our Western and Southern States.

Elapse', *v. n.* [Lat. *elabor*, *elapsus*—*e*, *ex*, and *labor*, *lapsus*, to fall, slip, or slide. See LAPSE.] To fall or slip out; to slide away; to slip or glide away; to pass away silently, as time.

Ela'queate, *v. a.* [Lat. *eloquare*, *elaqueatum*, from *elo*, out, and *laquare*, to ensnare, entangle, from *laqueus*, noose, snare.] To disentangle.

Elastic, *a.* [Fr. *élastique*; It. *elastico*; Sp. *elástico*, from *ar*, elastic, springy, springing.] Springing back when driven or forced out of its position or shape; having the power of returning to or recovering the form from which it is bent, extended, depressed, or distorted rebounding; flying back.

Elasticity, *adv.* In an elastic manner; by an elastic power; with a spring.

Elastic Gum, *n.* Same as INDIA-RUBBER, *q. v.*

Elasticity, *n.* [Fr. *élasticité*; Sp. *elasticidad*; It. *elasticità*.] State or property of being elastic; the inherent property of certain bodies, by which they recover their former figure or state, after external pressure, tension, or distortion. *E.* is only perfect where the body recovers exactly its primitive form after the force to which it has been subjected has been removed, and that in the same time as was required for the force to produce the alteration. This is, however, a quality not strictly found in nature. Aërial fluids or gases approach nearer to perfect *E.* than any other substance.

Elasticness, *n.* Quality of being elastic; elasticity.

Elate', *a.* [Lat. *elatus*, from *effero*. See the verb *High*, raised, elevated in mind; flushed, as with success puffed up; haughty; swelling.

—*v. a.* [Lat. *effero*, *elatus*—*e*, *ex*, and *fero*, *latus*, to bear or carry.] To exalt; to raise or swell, as the mind or spirits; to elevate with success; to puff up; to make proud.

Elat'edly, *adv.* With elation.

Elat'edness, *n.* State of being elated.

Elat'er, *n.* That which elevates.

—[From Gr. *elainein*, to drive.] (*Zoöl.*) One of the *Elat'ridæ*.

(*Bot.*) An elastic, spiral filament.

Elat'erie, *n.* (*Chem.*) The active principle of elatium.

Elat'eridæ, *n. pl.* (*Zoöl.*) A family of coleopterous insects. They have a narrow, elongated body; the head is, in almost all cases, inserted deeply into the thorax, a strong spine on the under part of the thorax at its base, fits into a groove; the legs are short, and rather slender. They are generally found upon the flowers at leaves of plants, which are their food. When disturbed they fold their legs and antennæ close to the body, and let themselves drop to the ground. If they fall on their back, or are placed on it, the shortness of the legs incapacitates them for obtaining another position by the means common to other insects; but they are enabled to do so by a violent muscular exertion, arching the body a little, and suddenly straightening again, so that they fling themselves into the air with jerk and a click. Hence the names *CLICK-BEETLE* (*q. v.*) and *SKIP-JACK*.

Elat'erite, *n.* Mineral caoutchouc, an elastic variety of bitumen.

Elate'rium, *n.* [Gr. *elaterios*, driving away.] See ECALUM.

(*Bot.*) Same as COCCUS, *q. v.*

E'lat'h. [Heb., "kind," "strength," or "an oak."] town of Arabia, on the E. gulf of the Red Sea.

Elatina'ceæ, *n.* [Gr. *elate*, a fir; the leaves resembling those of the fir-tree.] (*Bot.*) The Waterpepp family, an order of plants, alliance *Rutales*. *DIAG.* With a many-seeded fruit, which is finally apocarpous and polypetalous flowers. The flowers are small, axillary; sepals and petals 3–5; the latter, as well as the stamens, being hypogynous. The fruit is capsular 3–5-celled; the placentation axile. The styles 3–stigmatic capitate. The seeds are numerous and exalbuminous. The plants of this small order are scattered all over the world. They are generally considered acid. The order includes 6 genera and 22 species.

Elatine, *n.* (*Bot.*) The typical genus of the ord. *Elatinaceæ*, *q. v.*

Ela'tion, *n.* [Lat. *elatio*.] An inflation or elevation of mind proceeding from self-approbation; self-esteem; vanity, or pride, resulting from success; haughtiness; pride of prosperity.

E'lba. [Lat. *Ilva*; Gr. *Æthalia*.] A small island belonging to the kingdom of Italy, in the Mediterranean Sea off the coast of Tuscany, and with several much smaller

isles, lying at the mouth of the Gulf of Piombino. The island of Elba is 18 m. from E. to W., with a width varying from $2\frac{1}{2}$ to 12 m. in its widest part. The mountainous districts of the island yield large quantities of superior iron, marble, loadstones, and alum, besides wines and fruits. On the first abdication of Napoleon in 1814, Elba was assigned to him as a residence and empire. Here he accordingly took up his residence, in the month of May; and ten months after, February 26, 1815, he secretly left the island, and, landing in France, commenced that brief and final career known in history as the *Hundred Days*. Elba was a place of celebrity in the time of the Romans, and famed then, as now, for its yield of iron.

El'ba, in *Alabama*, a post-village, cap. of Coffee co., on Pea River, abt. 75 m. S. by E. of Montgomery.

El'ba, in *Illinois*, a post-office of Gallatin co.

—A township of Knox co.

El'ba, in *Mich.*, a township of Gratiot co.

—A township of Lapeer co.

El'ba, in *Minnesota*, a post-village and township of Winona co., on the Minneska River, abt. 20 m. W. by N. of Winona.

El'ba, in *New York*, a village of Essex co., abt. 25 m. W. by N. of Elizabethtown.

—A post-village and township of Genesee co., abt. 6 m. N. of Batavia.

El'ba, in *Wisconsin*, a thriving township of Dodge co.

Elbe, (*elb*.) a river of Germany, rising amid the mountains called the Riesengebirge, between Silesia and Bohemia, and, after a winding course of 550 miles, falling into the German Ocean abt. 70 m. below Hamburg. At its mouth it is 13 m. wide, and is connected by canals with the Oder and Trave, an affluent of the Baltic.

Elberfeld, a town of Rhenish Prussia, dist. Düsseldorf, on the Wupper. *Manuf.* Silk, cotton, and linen fabrics, velvet, lace, ribbons, &c., and is noted for the dyeing of Turkey-red. *Pop.* (1895) 125,899. Adjoining E., by a bridge, is *Barmen*, also a great manufacturing town of Rhenish Prussia, noted for its ribbons, for which it is the most important mart in Europe. *Pop.* (1895) 116,248.

El'bert, in *Georgia*, an E.N.E. co.: *area*, 406 sq. m. *Rivers*. Broad and Savannah rivers (which latter separates it from South Carolina) and Beaverdam, Coldwater, and Cedar creeks. *Surface*, hilly; *soil*, generally fertile. *Cap.* Elberton. *Pop.* (1890) 13,376.

El'berton, in *Georgia*, a post-village, cap. of Elbert co., about 78 m. N.W. of Augusta. *Pop.* (1897) abt. 1,400.

Elbeuf, (*el'be(r)uf*.) a town of France, dept. Seine Inférieure, on the Seine. E. has been long celebrated for its woollen manufactures, and is at the present time the principal seat of that branch of industry in France, the annual production being estimated at 100,000 pieces, valued at \$15,000,000. *Pop.* 22,766.

Elbing, a river rising in the lake of Dronsén, and falling into the Frishe Haff, a large inlet in the Baltic.

El'bing, a trading-town of East Prussia, on the river Elbing, 35 m. from Dantzic. Its streets are narrow, and the houses lofty. The chief buildings are several Protestant churches, a public library, several charitable institutions, and a house of industry, founded by an Englishman of the name of Cowle, in which 400 children are educated. *Manuf.* Woollens, vitriol, oil, sail-cloth, tobacco, sugar, starch, soap, and chicory. *Pop.* 25,000.

El'binsville, in *Pennsylvania*, a P. O. of Bedford co.

Elbeuf, *RENE DE LORRAINE*, Marquis of, (*el'be(r)uf*.) the 7th son of Claude, Duke of Guise, b. in 1566. — Charles, his grandson, who died in 1657, married first Catharine Henriette, daughter of Henry IV., and, secondly, Gabrielle d'Estrées. His posterity in the male line ceased in the person of Emmanuel Maurice, who b. in France, aged 86, in 1763. To the latter is attributed the discovery of the buried city of Herculaneum.

El'bow, *n.* [*Sax. elboga, elnboga* — *elne*, an ell, and *boga*, any thing curved, a bow; *Du. ellebong*; *Ger. elbogen*. See *ELL* and *BOW*.] The bend of the arm, or outer angle made by the bend of the arm; any flexure or angle; the obtuse angle of a wall, building, or road.

(*Anat.*) The joint of the arm formed by the lower end of the humerus and the upper end of the radius and ulna. The lower end of the humerus is received into the hollow of the ulna, so as to produce a hinge-like arrangement, and the upper end of the radius forms also a small part of the joint. The surface of the humerus in contact with the ulna is limited, internally and externally, by a prominent ridge, and is hollowed out in the centre; that in contact with the radius is a small rounded eminence which moves in the cavity of the latter. In front of the humerus, above the articular surface, are two depressions that receive the coronoid process and the head of the radius during flexure, and behind is a large fossa for the reception of the olecranon, or large process of the ulna, in the extension of the forearm. Where the bones touch, their surfaces are covered with cartilage, and their articular ends are kept in place by a number of ligaments.

(*Naut.*) The angle in each of the two cables by which a ship is moored, made by the intertwisting of those cables consequent on the swinging of the vessel. To form on E., one cable must cross the other cable, and then reach the ground on the same side as it leaves the ship's bow.

El'bow, *v. a.* To push with the elbow; to push or drive to a distance; to encroach on.

v. n. To put into an angle; to project; to bend.

El'bow-chair, *n.* A chair with arms to support the elbows.

El'bow-room, *n.* Room to extend the elbows on each side; freedom from confinement; room for motion or action.

El'bridge, in *Illinois*, a post-village of Edgar co., abt. 10 m. S.E. of Paris.

El'bridge, in *Michigan*, a township of Oceana county.

El'bridge, in *New York*, a post-village and township of Onondaga co., abt. 165 m. W. by N. of the city of Albany. *Manuf.* Knit goods, pails, chairs, lumber, &c.

Elburz, (*el-boorz'*.) the highest peak of the Caucasus, 18,526 feet above the level of the sea.

El'caja, *n.* (*Bot.*) See *TRICHILIA*.

Elce'seans, or **Elcesaites**, *n. pl.* (*Ecl. Hist.*) The followers of Elxai or Elcesai, a Jew, who flourished in the reign of Trajan (98-116). They ingrafted many opinions derived from Oriental philosophy on a mixture of Judaism and Christianity. Epiphanius says it is doubtful whether the Elcesians should be classed among the Christian or Jewish sects.

El'ché, a town of Spain, prov. Alicante, 16 m. S. W. of Alicante city, near the Elda, and abt. 2 m. from the sea. *Manuf.* Linens, woollens, and cottons. *Pop.* 20,000.

Elchingen, a village of Bavaria, on the left bank of the Danube, abt. 8 m. N.E. of Ulm. It is noteworthy as the scene of a battle fought on October 13, 1805, between the French under Ney, and the Austrians under Loudon, in which the latter were defeated. Ney's victory obtained for him the title of Duke of Elchingen.

El Da'ra, in *Illinois*, a post-office of Pike co.

Elde'na, in *Illinois*, a post-office of Lee co.

El'der, *a.* [*Sax. ealder*, the comparative degree of *eald*, now written *old*. See *OLD*.] Older; senior; having lived a longer time; born, produced, or formed before something else; prior in origin; preceding in the date of commission.

—*n.* One who is older than another or others; an ancestor; a person advanced in life, and who, on account of his age, experience, and wisdom, is selected for office.

(*Ecl. Hist.*) In the ancient Jewish polity, the elders were persons of considerable age and experience, and who consequently obtained certain power and influence over others. When Moses was sent into Egypt to deliver the children of Israel, he assembled the elders of the people, and told them that God had appeared unto him. Afterwards Moses associated with himself in the govt. 70 of the elders of Israel, which, according to the generality of interpreters, was the beginning of the Sanhedrim (which see). Every city, also, had its elders, who seem to have possessed a certain local jurisdiction. In the New Testament, the term E. is employed to designate a certain class of officers in the church, regarding the office and duties of whom there are various conflicting opinions. Whether the elders were lay officers of the church, has long been matter of dispute. It appears certain, however, that the elders mentioned by St. Paul (1 Tim. v.) did not hold the same office as those in the Presbyterian churches, but "labored in word and doctrine." It is said that Calvin admitted lay elders into church courts on what he conceived to be the sanction of the primitive church, and "as an effectual method of preventing the return of inordinate power in a superior order of clergy." Elders, in the Presbyterian Church, are certain laymen who are elected and ordained for ecclesiastical office, and who, in conjunction with the minister and deacons, compose in Scotland the kirk session. The number of elders is proportioned to the extent and population of the parish, and they are usually persons of tried character and Christian excellence. They have no right to teach or to dispense the sacraments; but in every question of jurisdiction within the parish, they form a spiritual court, of which the minister is officially moderator; and in the presbyteries, synods, and General Assembly, they sit as representatives of the several sessions or consistories.

Elder, *n.* [*Sax. ellarn, ellen*; *Ger. holder, holunder*.] (*Bot.*) See *SAMBUCUS*.

Elderly, *a.* Somewhat old; advanced beyond middle age; bordering on old age.

Eldership, *n.* State of being older; seniority.

(*Ecl.*) The office of an elder in the Presbyterian Church; order of elders.

Elder's Ridge, in *Pennsylvania*, a post-office of Indiana co.

Eldersville, in *Pennsylvania*, a post-village of Washington co., abt. 30 m. W. by S. of Pittsburgh.

Elderton, in *Pennsylvania*, a post-borough of Armstrong co., abt. 14 m. S.E. of Kittanning.

Eldest, *a.* [*Sax. ealdest*, superlative of *eald*, old.] Oldest; most advanced in age; that was born before others.

Eld'ing, *n.* [*A. S. alan*, to kindle.] Wood for burning; fuel. (*Local, Eng.*)

Eldon, in *Kansas*, a village of Pottawattomie co., abt. 8 m. N.E. of Manhattan.

Eldo'ra, in *Iowa*, a post-village and township, cap. of Hardin co., on the Iowa River, abt. 70 m. N.N.E. of Des Moines.

El Dora'do, [*Sp.*, the golden region.] The name given by Orellana, in 1531, to a country which he pretended to have discovered in the interior of S. America, between the rivers Orinoco and Amazon. He asserted that gold and precious stones existed in this region in great abundance. In 1595 Sir Walter Raleigh fitted out an expedition for the purpose of taking possession of El Dora'do for the English government. The term has been since applied to various regions in which gold has been found.

El Dora'do, a name given to a part of S. America by the Spaniards.

El Dora'do, in *Arkansas*, a post-village, cap. of Union co., 145 m. S. by W. of Little Rock; *pop.* abt. 450.

El Dora'do, in *California*, a E. central co., bordering on Nevada; *area*, abt. 1,790 sq. m. *Rivers*. American, Co-

sumne, and Carson rivers. *Surface*, mountainous, being traversed by the Sierra Nevada and Snowy Range of California; *soil*, in some parts fertile. *Min. Gold*, limestone, alabaster, and slate. *Cap.* Placerville. *Pop.* (1890) 9,232.

—A post-village of El Dorado co., about 6 m. S.W. of Placerville.

El Dora'do, in *Illinois*, a township of McDonough co.

—A post-village of Saline co., abt. 70 m. S.S.E. of Salem.

El Dora'do, in *Iowa*, a township of Benton co.

—A post-village of Fayette co., on Turkey river, abt. 8 m. N. of West Union.

El Dora'do, in *Kansas*, a thriving city of Butler co., on A., T. & S. F. and Mo. Pac. R.Rs., 32 m. N.E. of Wichita. Has tannery, cheese factory, and other manuf.; is in fine farming district. *Pop.* (1897) abt. 3,950.

El Dora'do, in *Kentucky*, a village of Mercer co.

Eldorado, in *Maryland*, a P. O. of Dorchester co.

Eldorado, in *Mississippi*, a P. O. of Warren co.

El Dorado, in *Missouri*, a city of Cedar co., 10 m. S.E. of Harwood. *Pop.* (1897) abt. 1,600.

El Dorado, in *Ohio*, a post-village of Preble co., abt. 27 m. W.N.W. of Dayton.

El Dorado, in *Pennsylvania*, a post-office of Blair co.

El Dorado, in *Wisconsin*, a post-township of Fond du Lac co.

El'dred, in *Michigan*, a post-village of Jackson co., abt. 6 m. S.E. of Jackson.

Eldred, in *Pennsylvania*, a township of Jefferson co.

—A township of Lycoming co.

—A township of McKean co.

—A township of Monroe co.

—A township of Schuylkill co.

—A township of Warren co.

El'dredsville, in *Pennsylvania*, a post-office of Sullivan co.

El'dridge, in *Alabama*, a post-office of Walker co.

Eldridge, in *Wisconsin*, a former post-office of Manitowoc co.

Eleanor, (*el'e-nor*.) duchess of Guienne, succeeded her father, William IX., at the age of 15, in 1137, and the same year married Louis VII., king of France. She accompanied him to the Holy Land, where she is said to have intrigued with her uncle, Raymond, prince of Antioch, and a young Turk named Saladin. A separation ensued between her and her husband, and in 1153 she married the duke of Normandy, afterwards Henry II., king of England, which occasioned a succession of wars between the two kingdoms. Her jealousy of Henry, and subsequent conduct to Fair Rosamond, have afforded a copious subject to poets and romance-writers. She excited her sons to rebel against their father, for which she was imprisoned sixteen years. On the accession of Richard I. she was released, and, in his absence in the Holy Land, was made regent. D. in 1204, a nun in the abbey of Fontevault.

Elea'teh, a town of the Amorites, near Heshbon, their capital, assigned to the tribe of Reuben (*Num.* xxxii. 3-37). Its ruins, now *El-Aal*, are a mile N.E. of Heshbon.

Eleat'ies, *n. pl.* (*Phil.*) A sect founded at Elea, in Sicily, by Zenophanes of Colophon, about B. C. 538. Zeno, who flourished B. C. 464, Empedocles, B. C. 435, and Melissus, B. C. 428, were leading philosophers of this school. They opposed the idea of a plurality of gods, but mingled this truth with many puerile and absurd conceits, which obscured and weakened its efficacy.

Elea'za, (*Script.*) Judas Maccabæus was defeated and slain by the Syrians under Ptochides and Alcimus at this place, in Palestine, near Ashdod, B. C. 160.

Elea'zar, (*Heb.*, help of God.) The third son of Aaron, and high-priest after him, (*Ex.* vi. 23; *Num.* xx. 25-28.) The high-priesthood continued in his family through seven generations; till the time of Eli, when we find it transferred to the line of Ithamar. In the reigns of Saul and David it was restored to the line of Eleazar, and so continued till after the captivity.

Elecampane', *n.* [From the Lat. *emula*.] (*Bot.*) See *ISULA*.

—A coarse candy, composed of little else than colored sugar.

Elect', *v. a.* [*Lat. eligo, electus* — *e. ez*, and *lego*, to choose.] To pick, select, or choose out, from among two or more, that which is preferred; to take for an office or employment; to choose from among a number; to manifest preference for by vote or designation; to designate, choose, or select as an object of mercy or favor.

—*a.* [*Lat. electus*.] Picked out; chosen; taken by preference from among two or more; chosen as the object of mercy; chosen; selected or designated to eternal life; chosen to an office, but not yet in office.

—*n.* One chosen out or set apart; persons who are chosen or designated by God to salvation; a nation or body selected and set apart, as a peculiar church or people.

Elect'ant, *n.* [*Lat. electans*.] An elector. (*R.*)

Elect'ary, *n.* (*Med.*) Same as *ELECTUARY*.

Elect'icism, *n.* Eclecticism.

Elect'ion, *n.* [*Fr.*, from *Lat. electio*.] Act of electing or choosing; choice; act of selecting one or more from others; act of choosing a person to fill an office or employment; choice. — Voluntary preference; free will. — Liberty to act or not; power of choosing or selecting. — Divine choice; predestination. — Predetermination. — The public choice of officers; those who are elected.

(*Law*.) E. is, when a man is left to his own free will to take or do one thing or another, which he pleases. It is the obligation imposed upon a party to choose between two or more inconsistent or alternative rights or claims, where he cannot enjoy the benefits of both. In courts of equity, the principle of election is frequently

applied where a party has inconsistent rights, and is compelled to elect which he will enforce. It has been said that the doctrine constitutes a rule of law as well as in equity, but that, in consequence of the forms of proceeding at law, a party cannot be put to elect. Every act of election presupposes a plurality of gifts or rights, with a right of the party to elect any one of them. Though, as a general rule, a person is not allowed to sue in equity and at law for the same thing, but is obliged to elect in which court he will proceed; yet there is an exception in the case of a mortgagee, who may proceed both in equity and at law at the same time.

(*Theol.*) Election is defined as "a purpose of God referring to certain and definite persons of the fallen and sinful race of mankind, determining to unite them to Christ, and by means of that new connection with Him to bring them to perfect holiness and happiness."—That God hath out of His mere good pleasure from all eternity predestined some of the human race to everlasting life, and left others to inevitable and eternal damnation, is maintained to be a doctrine clearly taught in Scripture, and a necessary consequence of the omniscience and foreknowledge of God. See PREDESTINATION.

Electioneer, *v. n.* To make interest for a candidate at an election; to use arts for securing the election of a candidate; to canvass for votes.

Electioneerer, *n.* One who is active in promoting an election.

Elective, *a.* [*Fr. Electif*, from *L. Lat. electivus*.] Dependent on choice; bestowed or passing by election; pertaining to, or consisting in, choice or right of choosing; exerting the power of choice.

Elective affinity. (*Chem.*) This signifies the order of preference, as it were, in which substances combine; thus, if nitric acid be added to a mixture of lime and magnesia, it will elect or choose to combine with the lime in preference to the magnesia.—See AFFINITY.

Elective government. (*Polit.*) A government in which all functionaries, from the highest to the lowest, are chosen by the suffrages of a greater or less number of citizens. Of these, the government of ancient Athens, and in modern times that of the U. S., will serve as examples. When the functionaries of an elective government are chosen by a very great number, or by all the people, as in this country, it is a *democracy*; and when by a comparatively small number, it is either an *aristocracy* or an *oligarchy*.

Electively, *adv.* By choice; with preference of one to another.

Elect'or, *n.* [*L. Lat.*; *Fr. Electeur*.] One who elects, or one who has the right of choice; a person who has the right of voting for public officers.

(*Amer. Const.*) A member of the Electoral College (*q. v.*).

(*Ger. Hist.*) The German Empire became elective after the death of Conrad I., in 919, when the right of choosing his successor was exercised by the dukes of Saxony, Bavaria, Franconia, and Swabia. In 1257 there were seven electors, viz., the archbishops of Mayence, Trèves, and Cologne, with the Count Palatine, of the Rhine, and the rulers of Brandenburg, Saxony, and Bohemia. These were recognized by the States in 1338, and confirmed by Charles IV. in the Golden Bull of 1356. The treaty of Westphalia added another elector in 1648, in the person of the palatine Frederic V., whose vote had been conferred upon the Duke of Bavaria; and in 1692 the emperor Leopold I. granted the privilege to the duke of Brunswick-Lüneburg, who became the ninth elector. In 1777, the electorate of Bavaria was reunited to the palatinate, which reduced the number to eight; but in 1803 the diet of Ratisbon increased the number to ten, viz.: the archbishops of Mayence, Bohemia, Bavaria, Salzburg, Saxony, Brandenburg, Brunswick, Würtemberg, Baden, and Hesse. In 1804, Francis I. declared the empire hereditary, in consequence of which the dignity of elector became merely nominal. The title is now only borne by the princes of Hesse-Cassel. The title of ELECTOR-PALATINE was first assumed by Rodolph I., count-palatine of the Rhine, in 1294.

Electoral, *a.* Pertaining to election or electors.

Electoral College. The body of the electors chosen by the people of the U. S. to elect their President and Vice-president.—The Electoral College is the outcome of a difficulty experienced by the Constitutional Convention in deciding who would be the best judges of the fitness of the candidates for the offices named—the people, or a select body chosen by the people; this body to be either Congress, or delegates selected for this express purpose. It was doubted if the people as a whole would be the best judges of a candidate's qualifications for the high office of National Executive; and it was finally decided to let the people choose men whose proficiency they knew, and let this chosen body elect candidates of their own choice. The method fixed upon was that the people of each State should vote for as many electors as they had members in Congress, these to be free from connection with the Government, and the choice of the President and Vice-president to be left wholly in their hands. As is well known, this plan has not had the effect for which it was designed. The electors, as now chosen, are pledged to support certain previously selected candidates, and the choice of the President has fallen so strictly into the hands of the people that it has been proposed to do away with the Electoral College as useless and cumbersome, and have these officers elected directly by the popular vote.—The law governing the duty of the electors provides that they shall meet within a fixed period after the date of their election, cast their votes and transmit the result to the seat of Government by the fourth Monday of the

following January. On the second Wednesday of February, following, a joint session of the two Houses of Congress is held, with the President of the Senate as presiding officer, whose duty it is to open the certificates of the electoral vote, and hand them to tellers who have been appointed to make a list of and count the votes, and deliver the result of their count to the presiding officer, who thereupon announces the same to the assembled Congress. This announcement is deemed a final and sufficient declaration and guarantee of the election of the persons so chosen President and Vice-President of the U. S. The principal objection to the Electoral College system is that it does not fairly represent the choice of the people, and that through its agency a candidate may be elected President who has not received a majority of the votes of the people of the U. S.; in other words, that a candidate may receive a large majority of the votes and yet fail of election by the Electoral College.

Electorate, *n.* **Electoral'ity**, *n.* [*Fr. électoral*; *Sp. electoralio*; *It. elettorato*.] The territory of an elector, as formerly in Germany.

Electress, *n.* Same as ELECTRESS.

Elect'orship, *n.* The office of an elector.

Elect'ra. (*Myth. or Anc. Hist.*) Of this name the following are the most remarkable:—One of the Oceanides, wife of Atlas, and mother of Dardanus, by Jupiter.—A daughter of Atlas and Pleione. She was changed into a constellation.—A daughter of Agamemnon, king of Argos. She first incited her brother, Orestes, to avenge his father's death, by assassinating his mother, Clytemnestra. Orestes gave her in marriage to his friend Pylades, and she became mother of two sons, Strophius and Medon. Her adventures and misfortunes form one of the interesting tragedies of the poet Sophocles.

Electrep'eter, *n.* [*Gr. elektron*, amber, and *trepein*, to turn.] (*Phys.*) An instrument for changing the direction of electrical currents.

Electress, *n.* [*Fr. électrice*; *Sp. electrica*; *It. electrica*.] (*Ger. Hist.*) The wife or the widow of an elector.

Electric, or **ELECTRICAL**, *a.* [*Fr. électrique*; *Sp. eléctrico*; *It. elettrico*, from *Gr. elektron*, amber.] Pertaining to electricity; containing electricity, or capable of exhibiting it; derived from or produced by electricity.

Electric, *n.* (*Phys.*) A substance which may, under ordinary circumstances, be readily made to evince electrical properties by friction. Amber is a powerful electric, and its property of attracting light particles of matter when rubbed was known to the ancients. From the Greek word for amber, the terms *electric*, *electricity*, and many others, are derived. Electrics do not transmit, or conduct, electricity; hence, they are frequently termed *non-conductors* or *insulators*; while, on the other hand, *anelectrics* (*q. v.*) are transmitters, or conductors, of electrical action. The most perfect electrics are shellac, sulphur, amber, jet, resinous bodies, gums, gun-cotton, glass, silk, diamond, agate, tourmaline, dry fur, hair, wool, feathers, paper, turpentine, and various oils, dry atmospheric air, and other gases, steam of high elasticity, and ice at 0° Fahr. The facility of rapidly conducting away electricity prevents many solid bodies from being regarded as electric, though they may be made to develop electricity by friction. By insulating a metallic rod with a glass or resin handle, it may be made, like the glass tube, to develop electricity; opposed to ANELECTRIC (*q. v.*). See ELECTRICITY.

Electric Absorption. The apparent soaking of an electric charge into the glass or other solid substance of a Leyden jar, or condenser. When such a condenser has been discharged, a portion of the electricity remains, and may be made subsequently to appear as a residual charge. The cause of this is not known; but the action is as if some of the electricity had soaked into the dielectric, and gradually reappeared after the main charge had been neutralized.

Electric Cable. The combination of a series of insulated electric conductors, covered with a metallic sheath, or a single conductor thus sheathed. The conductor may consist of a single wire, a number of wires in connection, or a number insulated from each other. A cable, therefore, consists of the following parts: the core, or conducting wire or wires; the insulating material separating the wires; and the armor or sheath, consisting of strands of iron wire or of a covering of lead. Cables are aerial, submarine, or underground, in accordance with their position; while their purpose may be telegraphic, telephonic, or the transmission of light or power currents. Underground cables are surrounded with a waterproof insulating substance, and protected by a sheathing—usually of lead. For ready examination and the addition of new cables when necessary, underground cables are placed in a conduit or subway. Submarine cables may be designed for either shallow water or deep sea. The former are more heavily armored than deep-sea cables, to protect them from chafing through the action of tides and currents—a danger which does not exist under the deep ocean. Gutta-percha is here usually employed for the insulating material of the core, for which it answers admirably. Around this are wrapped strands of tarred hemp or jute, known as the *cable serving*, to protect it from the pressure of the galvanized iron wire which is next wound on. To prevent corrosion of the latter, the iron wire is covered with tarred hemp. Before a telegraph line or cable can transmit a signal to its farther end, its difference of

potential must be raised to an amount dependent on the character of the instruments and the nature of the system. The first effect of sending an electric charge into a cable is to produce an accumulation of electricity along its extent, similar to the charge in a condenser. A cable, in fact, acts as a condenser; and, from the high inductive capacity of the insulator surrounding, permits considerable induction to take place between the core and the metallic armor or the ground. The capacity of the cable depends on the capacity of the wire—*i. e.*, its length and surface area, the specific induction of its insulator, and the vicinity of the earth or other conductors; submarine or earth lines thus having a greater capacity than air lines. This accumulation of charge retards the speed of signalling, since this cannot take place until the wire is charged from end to end; and it must be discharged or neutralized before a return signal can be sent. This is effected by connecting each end to earth or by the action of the reverse current itself.

Electric Charge. The quantity of electricity that exists on the surface of an electrified conductor; this quantity having its maximum limit, beyond which no further charge can be received. Discharge or loss of electricity takes place when the conductor is connected by a conducting body with the earth, but if it be isolated from any other conductor it remains in a free or unchanged state. As, however, complete isolation is impossible, more or less loss of charge gradually takes place, and it will in time all disappear by leakage, or aerial convection. It is an interesting fact that leakage is more rapid with a negative than with a positive charge. Leakage has been prevented, by Prof. Crookes, by surrounding charged conductors with a high vacuum, thus showing that air is the principal agent in this loss. The charge is said to be *bound* when the conductor is placed near another conductor with a dielectric medium between. In this case a charge of the opposite name is induced in the neighboring conductor. Such a charge is not discharged if contact is made with the earth, it being held by the attraction of the neighboring conductor. The latter loses its charge on the removal of the charged conductor; but if it be connected with the earth it discharges electricity of the same name as that on the inducing conductor, and on removal it now retains a permanent charge of the opposite name: negative, if the primary charge is positive, and *vice versa*. The electric charge distributes itself over the surface of the conductor in accordance with its shape. In a sphere it is of equal density at all parts of the surface, but varies where the body is irregular in shape. Thus, it is greater at the corners of a cube than in the middle of the side, and at the extremities of an egg-shaped body, the apex of a cone, or the edge of a circular disk. Its density increases at a pointed extremity to such an extent that rapid loss takes place. In the case of a Leyden jar discharge does not carry off all the electricity, a residual charge remaining which becomes apparent in a few minutes, and which is believed to be due to a strained position of the molecules of the glass. See ELECTRIC ABSORPTION.

Electric Circuit. The path which electricity follows in its journey from a given point, through a conducting medium, back to its starting point. This circuit, by the use of conducting wires, may be made thousands of miles in length, returning directly to the starting point if an insulated return wire be used. Ordinarily, however, the earth is made part of the circuit, the charge of a telegraphic wire, for instance, being discharged into the ground, and equilibration being completed through earth action. A circuit is said to be closed when conduction is continuous, and broken when continuity is disturbed and the current ceases to pass. All lines of magnetic force form closed circuits, and such closed circuits are supposed to exist within the substance of every atom or molecule, these opening out and forming lines of polarized atoms in the case of magnetization. This, however, is theoretical. The electric current is not instantaneous in its passage through a circuit, there being a degree of resistance in the best conductors and time occupied before the current attains its maximum strength.

Electric Coil. A convolution of insulated wire through which an electric current may be passed. Coils are used for various purposes in electrical science, one of the most important being in the production of electro-magnets (*q. v.*) by sending an electric current through a coil wound round the core of a magnet. Equally important are armature coils, which are wound round the cores of the armatures of electro-magnets, for the production of a current of electricity through rotation before the poles of the magnet. Such an arrangement forms a dynamo machine, and is the source of the power currents now so widely employed. An induction coil is an apparatus consisting of two parallel coils of insulated wire used for the production of currents through inductive action. The coil through which the current passes is called the primary and that in which the current is induced the secondary coil. As usually made, the primary coil consists of a few turns of thick wire, the secondary of many turns, often thousands in number, of fine wire, it being sometimes over a hundred miles in length. Such an arrangement is known as a Ruhmkorff coil, from the name of a celebrated manufacturer of these appliances. Each current sent through the primary wire induces a momentary current of much greater electro-motive force in the secondary, its voltage being thousands of times that of the primary, while its current strength is correspondingly reduced. By rapidly breaking the current in the primary coil, a rapid succession of alternating currents passes through the secondary, yielding a

Fig. 921.—ELECTRA.

torrent of sparks, of great length, between its disconnected extremities. On the other hand, by making the primary coil long and thin and the secondary short and thick, the reverse condition may be produced, a current of small strength but of high electro-motive force being transformed into one of low electro-motive force and large current strength. By the use of a condenser in the circuit of the induction coil, the tendency to spark at the contact points on breaking circuit is much reduced; this, by making the battery current more sudden, adding considerably to its inductive action. One important use of the single coil system is for the measurement of electric resistance. This is accomplished by the use of a coil of wire whose resistance is known, and of which successively greater lengths can be thrown into the circuit to measure greater resistances. By comparison with this resistance coil, the resistance of a broken line wire or cable can be accurately ascertained, and the location of the break discovered within narrow limits.

Electric Condenser. A device for increasing the capacity of an insulated conductor by bringing it near another conductor connected with the earth, the two being separated by any dielectric medium which will readily permit induction to take place through it. Thus a conductor which stands in a position separated from other conductors, and connected with an electrical machine, will accept only a very small charge. But if it be placed near another earth-connected conductor, the two being separated by a dielectric, as a plate of glass, it may be made to receive a much greater charge. This is due to mutual induction. If the primary conductor be charged with positive electricity, the secondary will discharge positive electricity to earth, and by its accumulated negative charge induce conditions in the primary permitting it to hold a greater positive charge; these inductions alternating until the maximum charges are received. A Leyden jar is such a condenser. In practice, condensers are now made of sheets of tin foil, separated by sheets of oiled silk, mica, or paraffined paper. A condenser does not in any sense store electricity. The same quantity of electricity passes from the secondary plate or outer coating of a Leyden jar as is passed into the primary plate or inner coating. What is stored is not electricity, but electrical energy. Condensers are employed usefully in connection with alternating coils, to increase their effect. See ELECTRIC COIL.

Electric Conductor. A substance which will permit the passage of an electric current, or which possesses the power of controlling the direction in which electricity shall pass through the contiguous ether or other dielectric. The term conductor is opposed to non-conductor, which indicates a substance which will not permit the passage of an electric current. These terms, however, are only relative, since there is no such thing as a perfect conductor or non-conductor, the best conductors having a degree of resistance and the best non-conductors failing to completely prevent current flow. Between the maxima there are numerous shades of less complete conduction or non-conduction, the opposed conditions shading into each other in the middle line. Conductors are distinguished from electrolytes, since the latter permit the passage of electricity only through chemical decomposition.

Electric Current. The quantity of electricity which passes per second through any conductor or circuit, and its rate of flow through the circuit. In the current there are two things to be considered, the electro-motive force to which it is due and the resistance which it has to overcome. The current is supposed to flow out from the positive terminal of a source of electric energy, to pass through the circuit, and to return into the source at its negative terminal, neutralization being effected by the meeting of the positive and negative charges. In ordinary extended circuits part of this flow is through the earth, and it may be that both the positive and negative charges make their way into the earth, and are there neutralized without an actual completion of the electric circuit as is the case when a return wire is employed. In the flow of the current through the conductor it may be caused to pass through various devices, such as a lamp, motor or storage battery. These it enters at their positive terminals and leaves at their negative terminals. It may be connected with the wire of a coil around a core of soft iron, producing electro-magnetism, and in other ways may be made to yield power and do work. In the words of Professor Lodge: "Electricity can travel with matter, or it can travel through matter, by convection or by conduction, and by no other way." Some theorists do not accept this view of a single current traversing the conductor in one direction, but believe that there are two distinct currents, one of positive and the other of negative electricity, which flow through the conductor in opposite directions, each being equal in quantity to the other, and each neutralizing the other when meeting. It may be said that various phenomena appear to favor this view, and also that there are differences in the behavior of the supposed positive and negative currents, indicating distinct and characteristic attributes in each.—*The Current Medium.* In recent theory the current is no longer thought to make its way through the substance of the conductor, but through the surrounding dielectric medium, though it is held in close contiguity to the surface of the conductor. Poynting, who has studied this matter carefully, remarks: "A space containing electrical currents may be regarded as the field where energy is transformed at certain points into the electric or magnetic kind, by means of batteries, dynamos, thermopiles, &c., and in other parts of the field this energy is being again transformed into heat, work done by the electro-

magnetic forces, or any other form yielded by currents. Formerly the current was regarded as something travelling in the conductor, and the energy which appeared at any part of the circuit was supposed to be conveyed thither through the conductor by the current. But the existence of induced currents and electro-magnetic actions have led us to look on the medium surrounding the conductor as playing a very important part in the development of the phenomena. If we believe in the continuity of the motion of energy, we are forced to conclude that the surrounding medium is capable of containing energy; and that it is capable of being transferred from point to point. We are thus led to consider the problem: How does the energy about an electric current pass from point to point; by what paths does it travel, and according to what laws? Briefly stated, the tendency of recent views is that the energy is conveyed through the electro-magnetic medium or ether, and that the function of the wire is to localize the direction or to concentrate the flow in a particular path, and thus provide a sink or place in which the energy can be dissipated." The condition of affairs in the case of a conductor traversed by currents, is now generally regarded as similar to that of the action of heat when a wire is exposed to a high temperature and then transferred to a lower temperature. The current begins at the surface of the conductor and makes its way more or less slowly inward toward the center. If the current be constant, its effect soon reaches the deepest layers. But if it is intermittent, being rapidly broken or alternated, before it has sunk deeply its flow is reversed, as that of heat turns back toward the surface when the heated substance is removed to a place of low temperature. In case of rapid alternation, therefore, the current does not penetrate deeply, but becomes confined to surface layers, becoming more superficial the more rapid the alternations. In such a case the solid conductor acts practically as a hollow cylinder, since the electric energy is confined to its surface layers. Maxwell, Rayleigh, and others regard a conductor conveying a rapidly alternating current as possessing in its central portions a counter electro-motive force greater than that of the outer portions. The conception here given regards the electric energy of the current, not as being pushed through the conductor, like water through a pipe, but as being absorbed at its surface from the surrounding dielectric; being, as it were, rained down on the conductor from the space outside it, as we may conceive heat to be rained down on a cool mass from a heated atmosphere surrounding.—*Strength and Force.* An electric current may differ in two particulars, those of strength and force. Strength refers to the quantity of electricity present, the degree of energy present—or of activity of motion, if energy be the effect of motion. Force, or electro-motive force, as it is called in this instance, is the force of flow of the current, and is due to difference of potential or degrees of separation between the positive and negative states. Both these conditions may be illustrated by the flow of water: Strength of current is equivalent to depth of water, electro-motive force to difference of level. If the difference of level between two parts of a stream be considerable, the downflow will be vigorous whether the stream be deep or shallow; if the difference of level be slight, the flow will be deliberate whether the quantity of water be great or small. In the same way a great quantity of electric energy will not cause a forcible current unless there be a considerable difference of level or potential; and a weak current, with high potential, will flow more vigorously than a strong current with low potential. The quantity of current is known as *density*, and may be estimated by its electrolytic action, or the weight of metal it is capable of depositing from an electrolytic solution. The unit of current is known as the *ampere*, and is a current of strength sufficient to deposit .005084 grains of copper per second. The definite quantity or amount of the thing or energy called electricity present in any instance is named a *coulomb*; and an ampere is a rate of flow sufficient to transmit one coulomb a second. The *volt*, the unit of electro-motive force, is such a force as would cause a current of one ampere to overcome the resistance of one *ohm*, the latter being the unit of resistance. These units are named here for convenience in distinguishing the terms employed in technical electrical language, and will be more fully explained under ELECTRICAL UNITS (q. v.). A *direct current* of electricity is one that flows continuously in one direction throughout its duration; an *alternating current* is one whose direction is being constantly reversed. In the case of currents produced by a dynamo-electric machine, if no device be employed to prevent it, the currents alternate during each rotation of the armature; and if a direct current is required a device called the *commutator* is employed to change the direction of each alternate current in the armature coil, and cause all the currents to move in one direction in the outer circuit. An *induced current* is one produced in a secondary conductor by the action of the current in a primary conductor. See ELECTRIC COIL. In recent practical electricity, the induction coil is of great service in its power of reversal of current and voltage or electro-motive force, through the aid of a device known as the *transformer*. A transformer consists essentially of an induction coil in which the primary wire is long and thin, with numerous turns, and the secondary wire short and thick, with few turns. Alternating currents of small strength but considerable voltage can be sent over a line from a distant station, their high potential giving them great power in the overcoming of resistance; and then, by the aid of a transformer or converter, can be changed in the

secondary wire into currents of considerable strength and low voltage. By this means currents of small quantity can be sent over thin wires with little loss, if their electro-motive force be sufficiently great; and in the thick secondary wire of the transformer can be converted into currents of great strength and low electro-motive force, for purposes in which current strength is desired. Thus, a current of 10 amperes, at 2,000 volts, if passed into a transformer whose primary wire has twenty times the number of turns of the secondary, will be changed into a current of nearly twenty times the strength, or 200 amperes, with only about one-twentieth the voltage, or 100 volts. In general, the shorter the secondary wire, and the fewer its number of turns, as compared with the primary, the greater will be the reduction in voltage and increase in current strength, the change being nearly proportional to the ratio of the number of windings of the two coils. This device, which is technically known as a *step-down transformer*, is of the utmost value in electric power transmission, enabling a current of great voltage to be sent for long distances without the loss which would take place with lesser voltage, and, by aid of the transformer, to decrease the voltage and increase the current for commercial use. The *step-up transformer* acts in the opposite way, converting a large current, of small voltage, into a small current of high voltage. In this case the primary wire is thick and of few turns, the secondary one thin and of many turns, thus reversing the effect. Such an arrangement is known as a *Ruhmkorff coil*, and by its aid currents of immense electro-motive force may be produced. It is in this way that Tesla has produced his extraordinary effects, he dealing with currents of enormous voltage and correspondingly reduced current strength. A powerful current of 2,000 volts, when passed through the human body, would produce certain death; but Tesla has passed currents of 200,000 volts through his body without injury, while so great is their electro-motive force that the electricity streams from parts of his body into the air. Currents of this great potential can be transmitted without the use of wires, and a room with copper plates in the ceiling and floor can be illuminated by the glow of vacuum tubes anywhere between them. See ELECTRIC DISCHARGE.

Electric Discharge. The removal of a charge from a conductor by means of a stream of electrified air particles, or through connection with the earth, or another conductor; signifying the equalization of the difference of potential between the terminals of an electric source on their connection with a conductor. The discharge of a voltaic or a storage battery is nearly continuous, and yields a practically continuous current; that from an insulated conductor—a Leyden jar, a condenser, or a cloud—is *oscillatory*, and brief in duration, yielding what have been called momentary currents. A *disruptive discharge* is one that takes place suddenly across an intervening dielectric. It is supposed to be preceded by a strain in the dielectric, which suddenly yields and permits the discharge to pass as a spark, or succession of sparks, which, when long and through the air, take a zigzag path. The sparks produced consist of heated gases, with volatilized portions of the conductor. A lightning flash is a disruptive discharge due to great difference of potential. The disruptive charge is oscillatory, and not instantaneous, it consisting of a number of discharges taking place in alternately opposite directions. The effect of the discharge upon the human body increases in proportion to its suddenness, the greatest shock being supposed to be due to the discharge which soonest reaches its maximum. This conclusion, however, is in part disproved by the re-

Fig. 2824.—ELECTRIC SPARKS.

From photograph (one-half second exposure) of the discharge between the poles of a plate machine.

searches of Tesla. The luminous effects of a discharge vary as to color, intensity, shape and sound in accordance with various circumstances, such as the kind and density of the medium, the kind of electricity, the substance of the electrodes, the density of the discharge, &c. A spark through hydrogen is crimson or reddish in color; one through chlorine or carbonic acid, greenish. Density of the medium has an important effect. If the discharge from an induction coil be passed through a partial vacuum it yields an ovoidal mass of light. With an increase in the vacuum the light grows brighter to a certain limit, then shows stria of alternate dark and light bands, and in case of very high vacua the discharge fails to pass. The discharge of positive electricity assumes a fan-like shape; that of negative electricity the shape of a star. The disruptive discharge through air is attended with a snapping or crackling sound, which in the case of lightning becomes the intense noise of thunder. In the case of a vacuum, a

faint hissing noise may be heard, or all sound disappear. In high vacua the molecules streaming off from the poles yield luminous effects, from their bombardment of the sides of the glass vessel; and in certain glasses a fluorescence appears.—*Convective Discharge*. A discharge which comes from points on the surface of a highly charged conductor, through the repulsion of air particles, each of which is charged and carries off a minute portion of the charge. It is sometimes called a *silent discharge*, though often attended by a slight sound; and is also called a *glow* or *brush discharge*, being of a brush-shape when the electricity is positive, but star-shaped when it is negative. In rarefied gases the discharge is convective, and produces luminous effects of great beauty. See *GEISSLER TUBES*. The discharge which takes place between the terminals of the secondary of an induction coil of high frequency yields striking effects. It has been largely investigated by Tesla, with interesting results. When the number of alternations per second is high, and the primary current

Fig. 2825.—ALTERNATE CURRENT ARC.

Exhibiting the periodic extension of the arc; from a photograph.

small, the discharge is in the shape of a thin thread of feeble color, and so sensitive that it may be deflected by the breath. Yet it is quite persistent. Tesla attributes its great sensitiveness to the motion of dust particles suspended in the air. If the current, through the primary, be increased beyond a certain limit, the *sensitive thread discharge* is succeeded by the *flaming discharge*, consisting of a white and flaming arc-like appearance. For its best effect the alternations of current should not be too frequent. Considerable heat is developed, and the shrill note which attends less powerful discharges is absent. This is believed to be due to the very great frequency of alternation. When the frequency of the alternations passes a certain limit, the *streaming discharge* appears, luminous streams passing in abundance, not only between the terminals of the secondary coil, but between the primary and secondary through the intervening space. These streams are not confined to the terminals, but issue from all points and projections. By still further increasing the frequency, the streaming discharge passes into what has been called the *brush and spray discharge*, and takes on the appearance of a spray of silver-white sparks or a bunch of thin, silvery threads around a powerful brush. These phenomena have been closely studied by Tesla, who says of them that "they not only resemble, but are veritable flames, for they are hot." Certainly they are not as hot as a burning gas jet, but they would be if the frequency and the potential would be sufficiently high. At still higher frequencies this discharge takes on a new

Fig. 2826.—OSCILLATING ELECTRIC DISCHARGE.

From photograph.

form, described by Tesla, but not named. The tendency to stream out and dissipate becomes so great that "when the brush is produced at one terminal no sparking occurs, even if the hand or any conducting substance is held within the stream; and what is more singular, the luminous stream is not at all easily deflected by the approach of a conducting body. At this stage the streams seemingly pass with the greatest freedom through considerable thickness of insulators." If metallic spheres be attached to the terminals of the coil and a spark be passed between them, "by interposing a plate of ebonite the spark instantly ceases and the discharge spreads into an intensely luminous circle several inches in diameter, if the spheres be sufficiently large. If the spheres are so far apart that no spark occurs, by inserting a thick plate of glass the discharge is instantly induced to pass from the spheres to the glass in the form of luminous streams. It appears almost as though these streams pass through the dielectric. In reality this is not the case, as the streams are due to the molecules of the air which are violently agitated in the space between the oppositely charged surfaces of the spheres. The greater the specific inductive capacity of the interposed dielectric, the more powerful the effect produced. Owing to this, the streams show themselves with excessively high potentials even if the glass be as much as one and a half to two inches thick." Tesla's experiments with these high frequency discharge phenomena have attracted wide attention, from the remarkable results produced, and have added a new field to the study of electrical effects which may be susceptible of still more striking developments.

Electric Fish'es. (*Ichth.*) There are a few fishes which possess electric organs, capable of yielding a discharge strong enough to cause a severe shock. These are peculiar structures, due to a modification of the muscular tissue, and under the control of the nervous system. These organs have their most powerful development in the electric eel (*Gymnotus*), the African cat-fish (*Malapterurus*), and the electric ray (*Torpedo*), and are weakly developed in the remaining rays, and in several species of bony fishes (*Mormyrus* and *Gymnarchus*). These organs consist of a large number of rounded chambers or prismatic columns, separated by partitions of connective tissue. With them are associated greatly branching nerves whose ends fuse with disks of the modified muscle substance, or "electric plates." How these are charged with electricity is not known, but the currents are undoubtedly electrical. The activity of the organ depends on connection with the brain, nerve stimulus being required for its action. The organ itself may be exhausted by rapidly repeated discharges, and a period of rest is required before it can resume its activity. These organs are variously situated in the body. In the *Gymnotus*, the most powerful of electric fishes, they replace the lower muscles along the sides of the long tail, the whole apparatus being supplied with more than 200 spinal nerves. Its power of shock is very considerable. The ray is "able to disable by a single discharge a full grown man," and the *Gymnotus* must have a still greater effect. These organs may be both defensive and offensive in character, enabling the fish to paralyze or kill other fishes for food.

Electric Furnace. In the electric furnace, the heat employed is derived from electric incandescence or from the arc, the latter being most frequently employed. Its purpose is to effect difficult fusions for the extraction of metals from their ores or for other metallurgical operations. The substance to be treated is exposed directly to the heat of the voltaic arc. The crushed ore is, in some furnaces, permitted to fall through the arc, the melted matter being received in a suitable vessel, in which the separation of its constituents may be made. In other furnaces the ore is placed between electrodes of carbon or other refractory substance, and a powerful current passed through it. In the Cowles furnace, used in the reduction of aluminum, molten copper forms an alloy with the aluminum as soon as separated. The intense heat of the electric furnace has yielded, in considerable quantities, substances formerly not commercially attainable. Among these is carbide of calcium, the source of acetylene gas, now coming into use as an illuminant of remarkable brilliancy. Carborundum (*q. v.*), a product of the furnace not previously known, is of great value from its abrasive powers. Numerous applications of electricity to furnace-operations have been made, and new results of much importance will doubtless arise in the near future.

Electric Heating. It is a well-known phenomenon of electricity that the electric current develops heat in passing through any conductor, no matter how slight its resistance may be; the effect of resistance being to convert a portion of the electric energy into heat energy. If the conductor be long and of good conducting power, the heat developed is not very sensible, it being spread over a considerable area and rapidly lost by radiation. As resistance increases, the generation of heat grows greater; and a substance of large resistance, yet with some power of conduction, converts a great percentage of current into heat. The development of heat is great where there is a partial break in the circuit, as in electric welding, and greatest where the break is complete; yet the interval is traversed by the current, as in the arc lamp. The temperature to which a conductor of a given resistance is raised varies with the mass of the wire, its extent of radiating surface, and its specific heat capacity; a conductor of small diameter and little radi-

Fig. 2827.—ELECTRIC COOKING UTENSILS.

C—Detail of the wire connection.

ating surface being raised to a far higher temperature than if the mass and surface area be increased. The heat generated is also dependent upon the strength and the motive power of the current, a current of large volume and low electro-motive force being the best adapted for the development of high temperature, since high electro-motive force gives greater power of overcoming resistance. This principle has been made use of in the employment of electricity as a heating agent, electric heaters being used in trolley cars for heating purposes, a portion of the driving current being diverted through them, and for other purposes, such as domestic heating and cooking. These heaters consist essentially of coils or circuits of some refractory metal through which the current is passed, the wires employed being of the thickness adapted to produce the highest heating effect, while a current of large energy and low voltage is employed. The coils are surrounded by air or finely divided solids, and placed inside metal boxes or radiators, which

receive and throw off the heat produced. If the purpose is to heat water or other liquid, the coils are placed directly in the liquid, or are surrounded by radiating boxes placed in the liquid, so that all the heat evolved may be utilized. Electric heating is as yet in its infancy, but promises to have an important industrial future. As applied in street cars, it uses up a considerable portion of the current energy and renders necessary a greater power plant for a specified service.—Electric heating for household purposes has hardly got beyond the experimental stage; but already enough has been accomplished to show what a transformation will be effected in household economy when this method shall have been widely adopted. The mere turning of a switch will suffice to start the current through a suitable apparatus, made as ornamental as the taste may desire or wealth permit; and there will be no fuel to handle, ashes to remove, or dust to annoy. Cooking utensils have been devised, and only await the cheapening of the current to be put into use. These are arranged so that each carries its own heating coil; attach the wire, turn the switch, and the cooking process is at once begun. It may even be possible to arrange the utensils at night, so that one may lazily turn on the current by means of a switch-board in the bed room, and doze while the breakfast is cooking. In fact, nothing now prevents the general use of electricity as a means of domestic heating, where the necessary currents are within reach of connection, except the relatively high present cost of the system.

Electric Insulation. An electric charge or current in a conductor, if its maintenance is desired, must be kept from contact with other conducting substance; and, for this purpose, non-conducting or insulating material is employed. This is necessary in the case of underground or submarine wires, the coils of a dynamo or an electro-magnet, or in any case where contact with conducting substance will prove hurtful. Insulators for telegraphic or telephonic wires, which touch only at their points of support, are generally made of glass, earthenware, porcelain, or hard rubber, their forms varying in accordance with the conditions. It is necessary that the wire should rest on a smooth surface to avoid abrasion, either of its insulating cover or of the wire itself. Insulation for aerial wires which are likely to come into contact with conducting substance, or for coils, whose separate sections must be kept separate, is attained by wrapping with some non-conducting material, such as silk, wool, or cotton fibre. For underground wires various materials are employed; while in the case of submarine cables, gutta-percha forms the most efficient insulating material that has yet been tried. In some cases the wire is wrapped with perforated paper before being covered with the insulating material, or an innercord is wrapped around it. By this means a layer of air is enclosed between the wire and the outer covering, adding to the perfection of the insulation.

Electric Lighting.

Illumination by means of electricity, produced by the interruption of the electric current by a break in the conductor (arc light) or by the introduction of a non-conducting filament (incandescent light).

ARC LIGHT.—Immediately after the invention of the galvanic battery by Volta (1800), Sir Humphrey Davy had one made consisting of several hundred cells, and began experimentation on a large scale with it. The whole field was new, and no one knew what to expect. He sent the current through two touching pieces of charcoal. When these were separated a short distance the current did not stop flowing, but continued across the break; and the charcoal tips became dazzling in brightness, comparable with lightning. This was the first continuous electric light; for electric sparks are but transient. Davy had the carbon pencils held horizontally, and found he could separate them three or four inches without breaking the current, while between them was a blue flame curving upwards. This curved flame was named the *electric arc*. It is now known that the curvature is due to the rising current of heated air and not to any peculiarity of the electric

Fig. 2828.

ARC LIGHT—AUTOMATIC FEED.

flame; for when the carbon terminals are vertical, the flame is not thus curved. Gas coke was afterward substituted for charcoal; and the freer it is from impurities, the steadier is the light. Now, great pains are taken in preparing the carbon rods that are to be thus used. For fifty years after the discovery of the arc light, the only source of the electrical current was the galvanic battery; and, though this had been greatly improved

Fig. 2829.—HAND-FEED ARC LIGHT.

by Daniel, Grove, and Bunsen, the cost and trouble prevented its use in any way except in lecture-room experiments. To maintain an arc it requires 40 or 50 volts of electric pressure; and, as a single cell of the improved batteries gave but about 1.8 volts, as many as 30 cells were needed for a small arc, and 50 for a good one. The electric pressure steadily falls in such cells, and after using them but an hour or two they become unable to maintain an arc for a longer time, and must have their liquids renewed. The carbon points are raised to a high temperature; and, being in the air, they are slowly burned away, the product being carbonic acid gas, as in the common furnace. This wasting away results in increasing the distance apart of the points, until the current can no longer pass; when the light goes out until the points are again made to touch and then separated. This action makes it needful to provide an automatically regulating lamp that shall keep the terminals at a uniform distance apart. This is effected in several ways, the more common being a mechanism for lowering the upper rod, the lower being fixed in place (Fig. 2828). Hand-feed regulators have also been devised, by the use of which the carbon points are kept at the proper distance apart by turning a small thumb-piece connected with the carbon carriers. (See Fig. 2829.)

There are a number of curious phenomena shown by an arc light: (1) It cannot be produced in a vacuum: matter in its gaseous form is essential. (2) The carbon through which the current is introduced (positive) is always hotter than its mate (negative), and therefore, burns away at a more rapid rate—generally about twice as fast. In common arc lamps the positive carbon burns away about an inch in an hour. These are, however, made longer than the lower or negative terminal, if they are to be kept lighted for some hours, as in street lighting. (3) The positive carbon assumes a different form from the negative, having what is called a crater excavated in it, while the other assumes a conical form, as shown in Fig. 2830. Within this crater is to be seen a bright spot from which the arc starts. It is seldom as large as the tenth of an inch square, and from it comes

the most of the light given out. It moves about from place to place within the crater. Its temperature is about 6,000° F., while the conical tip is only about 4,000° F. By projecting upon a screen, with a lens one may see particles moving from the upper to the lower carbon at a moderate rate, but the material thus transported is soon burned. The high temperature of the arc is sufficient to melt the most refractory substances, or volatilize them. Iron melts at 3,000° F.; platinum at 3,500°; and both quickly flow in an arc, while rocks and clay are easily fused. Carbon itself is softened and vaporized, though it does not fuse.

An ordinary commercial arc light requires about 45 volts and from 7 to 10 amperes of current to maintain it. This represents about 5 or 6 of a horse-power, which amount of energy is therefore spent in the small

Fig. 2830.—ARC LIGHT.

space between the terminals of the carbons; and the most of it is radiated away, as light, from the bright spot in the crater. It is interesting to note that if 6 of a horse-power be spent in the hundredth of a square inch, it would require 60 horse-power for a spot an inch square, and for a square foot (144×60) 8,640 horse-power—an amount about equal to that radiated by the sun per square foot. This gives reason for thinking that the temperature of the sun cannot be far from the temperature of the arc itself; for if the surface of the

Fig. 2831.—SHORT-CIRCUITING AN EIGHTY-LIGHT ARC MACHINE.

sun were covered with such bright spots, it would radiate with as much energy as it now does. If more energy is spent upon an arc, it does not make it brighter or hotter; it makes the bright spot larger,—and of course it radiates more, for its surface is greater.

Until between 1850 and 1860, only galvanic batteries could be used for producing arc lights; thereafter magneto-electric machines, driven by steam engines, were made powerful enough to give large electric lights, and light-houses were thus illuminated, both in England and France, only a single lamp being used in a circuit. It was observed that if two lamps were placed in the circuit, and both were lighted, together they gave less light than a single one. It was therefore concluded that it was not practicable to employ more than one such light in a circuit, and there was no future for electric lighting. This was the common opinion until 1879. In that year C. F. Brush, of Cleveland, demonstrated in a commercial way that, with properly constructed dynamos and lamps, almost any number could be lighted in the same circuit. He had perceived, in 1876, that if one arc required 50 volts, two arcs would need 100 volts, three 150, and so on. Theoretically, this solved the problem; there remained the designing of the dynamos and lamps, and these soon followed. The development of the dynamo since 1873 has made it possible to make arc lights with almost any light-giving power. If large arcs are to be produced, large carbons are used, to give large luminous craters. Sometimes

Fig. 2832.—PARALLEL DISTRIBUTION.

these carbons are three or four inches in diameter, and use a current of 100 or 200 amperes. The pressure needed is seldom more than 55 or 60 volts. With such an arc placed in the focus of a large parabolic reflector, the beam may be directed at will. It is then called a search light, and may be seen in clear air for a hundred miles. The common street-arc seldom gives more than 800 candle-power; while a large search light may equal fifty million candles, or more. Such a one was shown at the Columbian Fair in 1893.

The uses to which the arc light has been put are many; not only for lighting houses and streets, but for signaling; for light-houses; for naval protection; for hastening the growth of vegetables for market; and for diminishing insect pests in gardens and orchards, these flocking in enormous numbers into the lamps and being thereby destroyed.

INCANDESCENT LIGHT.—An electric current always heats the conductor through which it passes to a degree which depends upon the strength of the current and the character of the conductor. The same current going through two wires, one of iron and the other of copper, of the same length and thickness, may heat the iron to a bright glow while the copper wire will be heated but a little. By properly regulating a current, it is possible to bring any kind of a wire to incandescence, and keep it so; but to give much light a metal needs to be very near its melting point, and then it has so little elasticity and is so soft as to lose its shape. This difficulty hindered the early attempts to produce an electric light with currents from a galvanic battery.

In 1845 Starr, of Cincinnati, tried a fine wire made of carbon. It glowed, but was soon burned out for the same reason the arc light carbons burn away. He then inclosed the carbon filament in a hermetically sealed glass globe from which the air had been exhausted. This prevented combustion, and he then had a practical incandescent electric lamp; but the necessary current for it could not be economically produced by a battery, and, as there was then no substitute, the invention was soon forgotten. In 1859 Moses G. Farmer, of Salem, Mass., made a similar lamp and used it for a time to light one of the rooms in his house. That, too, came to nothing, for the lack of an economical current of electricity. No one knew how to produce a lamp with definite candle-power, nor how to distribute a current of electricity to a number of lamps if he had them. In 1879 Edison attacked the double problem: How to make a lamp to give a definite candle-power, and how to produce and distribute a current for lighting in a commercial way. He succeeded in both. For the first, the plan of Starr was rediscovered, and a fine filament, made by carbonizing bamboo fiber, was inclosed in a hermetically sealed glass bulb from which the air was exhausted. For the second, he proposed to connect every lamp to both wires from the dynamo, independent of every other lamp; that is, like the steps in a ladder, as represented in figure 2832, "Parallel Distribution." By being the dynamo, or source of the current. In figure 2833, "Series Distribution," the lamps are put in the circuit so that whatever current goes through one

must go through all, and this is the plan for an arc light circuit. In parallel distribution any lamp may be lighted or stopped without interfering with the rest of the system. In the first system, the electric pressure in the wires leading from the dynamo may be kept uniform whether many, few or no lamps be lighted; but the current supplied by the dynamo will vary with the

Fig. 2833.—SERIES DISTRIBUTION.

number of lamps lighted. In the other system, the electric pressure varies with the number of lights in the circuit. If for one it be 45 volts, then for 50 lamps it would be (50×45) 2,250 volts; but the current would be kept the same by a proper regulator. The first of these is called the *constant pressure system*, the other the *constant current system*. This difference, now so simple and obvious, was neither simple nor obvious in 1878.

A given current of electricity—say of one ampere—will keep any length of wire or carbon filament at a given temperature. If it be incandescent, the amount of light given out will depend upon the length of the conductor thus heated. A filament the size of a horse hair will, with a proper current, give two or three candle-power to the linear inch. If .6 of an ampere gives three candles per inch, a filament eight inches long will give 24 candles, and 16 inches will give 48 candles; so the candle-power of a filament lamp depends upon the length of the filament. The electric pressure generally employed for such lamps is 50 or 110 volts. If .6 of an ampere will properly light a 110-volt lamp, then, according to Ohm's law (*q. v.*), the resistance of the lamp is $\frac{110}{.6} = 183$ ohms; while it is hot but it is

considerably more when cold. The amount of electrical energy spent in any lamp is found by multiplying the pressure by the current, EC. In the above lamp it will be $110 \times .6 = 66$ watts. If this lamp gives sixteen candles, the number of watts per candle is $\frac{66}{16} = 4.125$.

A horse-power is equal to 746 watts; hence, a horse-power may give $\frac{746}{4.125} = 180$ candles; and this may be distributed in lamps as one pleases—ten 18 candle-power lamps, or 18 of ten candle-power, or 11 of sixteen candle-power, &c. If stronger currents be sent through a given filament, it will increase in brightness faster than the current increases. Such a lamp as the above, giving 16 candle-power with .6 of an ampere, with .8 of an

Fig. 2834.—INCANDESCENT LAMPS.

C. F., Carbon Filament.

ampere may give 30 candle-power, or more; and with 1 ampere it may give a hundred, but the life of the lamp will be greatly shortened. With the latter current it might last but a few minutes. Lamps are made to be properly lighted by a current that will not rapidly destroy them, and should last for a thousand hours or longer. All lamps become less efficient as they age, and will not give their rated amount of light with their proper current. It has been calculated that after a lamp has been used about 400 hours, it is no longer profitable to keep it in service if a definite amount of light is required. The inner surface of the bulb becomes coated with a film of carbon from the filament, which dims the light; the filament becomes thinner from the loss, and ultimately it breaks. Lamps for special purposes are made, having much thicker filaments of

charred paper or thread or silk, which permit the employment of much stronger currents. Thus, one taking 10 amperes at 40 volts may give the light of 200 candles; that is, 50 candles to the linear inch, if the filament be but four inches long. Forty volts and 10 amperes is 400 watts; and, if 200 candle-power be given, the lamp takes but two watts per candle, and so is twice as efficient as the 16 candle-power lamp; but the lamp will not be useful for more than thirty or forty hours.

One may now compare the relative efficiencies of arc lights and the incandescent lamps: If the former gives 800 candle-power for a horse-power of 746 watts, this is $\left(\frac{800}{746}\right)$ 1.07 watts per candle. The special lamp takes

two watts per candle, and the ordinary lamp four or more. This may be stated in another way: One horse-power spent in an arc may give 800 candle-power; if spent in a special lamp may give 400 candle-power; if spent in a common commercial lamp will give less than 200 candle-power. The comparison is unfavorable to the incandescent lamp, from the standpoint of economy, and much remains to be done to change this condition; but the usefulness of the lamp, in some places, so overbalances its deficiencies that this method of electric lighting is employed, by those who can afford it, for the same reason that gas is used by others in the place of coal oil, though the latter does not cost half as much for a given amount of light.

Other methods of producing light from electricity have been proposed. When an electric discharge is passed through a glass tube of low vacuum, the residual gas becomes luminous. Geissler's tubes (*q. v.*) illustrate this; but the amount of light is seldom as great as one candle, though if the bore of the tube be very small—the hundredth part of an inch or less—the amount of light is greatly increased. MacFarlane Moore, of New

Fig. 2835.—INCANDESCENT TUBES—MOORE'S SYSTEM.

Jersey, has lighted large vacuum tubes, four or five feet long and two or three inches in diameter, by means of rapid discharges produced by breaking a strong current in a vacuum, which process gives a very high electric pressure and a relatively large current through the tube, and this may enable it to shine, giving 30 or 40 candle-power. Crookes discovered that electrical discharges in a vacuum, not too high, would make diamonds, sapphires, rubies and some other minerals glow brightly, with phosphorescent and characteristic colors. Such lighted tubes are beautiful objects, but the process is too costly for commercial work at present, because the amount of energy spent outside the tubes vastly exceeds that utilized within the tubes; but the amount of light given by that spent in the tube is ten times greater than that given by an equal amount of energy in the common incandescent lamp.—There are now (1897) in the U. S. more than 10,000 electric light plants—public and private—representing an invested capital of about \$500,000,000.

If all the energy represented by a pound of coal could be expended in the production of light, without waste, it would maintain thousands of 16 candle-power lamps for 12 hours.

Electric Machine'. Many varieties of electrical machinery have from time to time come into use, the term being principally applied to the frictional electrical machine employed to yield static electricity through friction of a glass plate, or cylinder, or of other dielectric material. Its principal use is for the purpose of producing spark and other discharge effects,

and for the study of static electrical conditions. The *influence machine* is an improved form of this, in which the charge is produced by induction. See **ELECTRICITY**.—The *hydro-electric machine* is a machine for the development of electricity by the friction of a jet of steam. The fact that electricity could be produced in this way was discovered by an engineer, who received a shock by placing his hand in a jet of steam escaping from a leaking boiler. Sir Wm. Armstrong studied its causes, and in 1840 produced a hydro-electric machine in which a jet of steam is allowed to escape from a boiler, passing through a cooling box, by which it is partly condensed into water. The friction of the drops of water against the orifice (and perhaps of the steam with the water surface), is the cause of the electricity evolved. It is not an economical source of electricity. See **DYNAMO-ELECTRIC MACHINE**.

Electric Meter. Any apparatus for measuring the quantity of electricity that passes through a circuit. Meters are used for commercial purposes, to test the quantity of electricity used by consumers. Various kinds are in use. *Electro-magnetic* meters measure the current by its electro-magnetic effects, the total current being passed through the meter. In the *electro-chemical* meter the current is measured by the electrolytic effects. In these a portion of the current is shunted off and usually passed through a solution of metallic salt, the amount of decomposition which takes place indicating the strength of the current. Others, known as *electro-thermal* meters, measure the increase in temperature of a resisting section through which it is passed, or the amount of some liquid which is evaporated by its heat. *Electric-time* meters are those in which no effort is made to measure the strength of the current but which keep a record of the number of hours that a lamp, motor, &c., is used. Edison's electric meter, which

is of the chemical class, consists of two cells containing zinc sulphate, in which two plates of zinc are dipped. The current that passes is indicated by the variation in the weight of these plates, due to electrolytic action and is discovered by weighing them at stated periods.

Electric Motors. An electric motor is a machine for transferring electrical energy into mechanical energy; mechanical energy being represented by the rotation of wheels, and their ability to do ordinary mechanical work such as is required for running machinery of any kind.

An electric current heats the conductor, but does not

Fig. 2836.—BARLOW MACHINE.

exhibit movement of any kind. Directly, it has no mechanical action. In 1819, Oersted, of Copenhagen, discovered that the position of a magnetic needle was disturbed by the presence of a current of electricity, which pushed it from its position, pointing north and south, to some angle to the east or west of it; depend-

ing upon which direction the current was going. If the current in the wire be going from south to north, the north end of the needle moves to the west. If the current be going from north to south, the south end of the needle moves to the west. This motion represents mechanical energy derived from the current; for, upon stopping the latter, the needle promptly returns to its original position. By changing the direction of the current at proper intervals, the needle may be made to go round and round. In like manner, if the conductor carrying the current be itself free to move, and the magnet be fixed, the conductor may be made to rotate continuously. The Barlow wheel, invented in 1825 (see Fig. 2836), consists of a metallic star fixed so as to rotate between the poles of a magnet. Its lower points touch into some mercury and, with the latter, form part of an electric circuit. When a current of electricity goes through the star and mercury, the former rotates continuously. By reversing the current the rotation will be reversed. About the same time Sturgeon discovered that iron became magnetic when a current of electricity was sent through a wire coiled about it. It had poles similar to natural magnets, and would attract and repel them. In 1829, Henry discovered how to make such artificial magnets much stronger than natural ones; these at once suggested the advisability of utilizing their stronger attractions and repulsions for mechanical purposes, and many forms of motors were devised between 1830 and 1840. One of the simplest and easiest to understand is the Page machine (Fig. 926). A vertical shaft is so fixed between the arms of a magnet as to be capable of rotation. A short electro-magnet is fixed to the shaft between the poles, and the wires from this magnet are soldered to a device called a *pole changer* or *conductor*, which directs the current through the electro-magnet so that its polarity is always the same as that of the large magnet when they face each other. They are then mutually repellant, and the electro-magnet, being free to move, turns away from the other; it is pushed round until the poles again face each other, when the direction of the current is changed and repulsion takes place, as before. Thus a continuous rotation may be kept up while the current is supplied. The speed of such a rotation may be as high as a hundred per second, and is a good representation of the conversion of electrical energy into mechanical energy. With such a small motor not much power could be expected; but it illustrates the fundamental principles of electro-magnetism as applied to all motors. Whether the shaft be long or short, vertical or horizontal, is a matter of no importance so long as the moving parts are placed where the magnetic push can be at its maximum. Neither is it important that the large magnet should be a permanent one, as in figure 926. If made an electro-magnet instead, its field may be made much stronger and its push correspondingly greater. The form of the large magnet, which is called the *field magnet*, may be any convenient one, so long as the rotating part, which is called an *armature*, is properly fixed between its poles. It is customary to make the field magnet short and thick, with its poles so cut away as to allow the armature, in the form of a ring or cylinder, to rotate as close as possible to them in order that the magnetic push may be as great as possible. How great this may be depends upon the size of the parts and the current which is provided. A magnet may be made that will support thousands of pounds if the armature touches the poles, and hundreds of pounds if separated from them by not too great distance. See ELECTRO-MAGNETISM.

Fig. 926.

PAGE'S ROTATING MACHINE.

Mechanical work is measured by the product obtained by multiplying the pressure (p) that produces the motion, by the distance (d) the body is moved, or pd . This product is called *foot pounds*. A horse-power equals 550 foot pounds per second, and $\frac{pd}{550} = 1$ horse-power, whether of muscle, steam, wind, water, or electric current. Thus, if a horse pulls a hundred pounds and thus moves a load 5 feet in a second, he has done (5×100) 500 foot pounds of work—nearly the standard horse-power. In like manner, the magnetic push that makes the armature rotate may be 100 pounds, and the circumference may move 11 feet in a second; pd will then be 1,100 foot pounds. The rate of work will be $\frac{1100}{550} = 2$ horse-power for the motor. If the armature, with the same pressure of 100 pounds, spun round at the rate of 100 linear feet per second, the work done would be (100×100) 10,000 foot pounds, and the horse-power $\frac{10,000}{550} = 18\frac{1}{11}$.

The electrical energy in the wire supplied to the motor is represented by the product of the electrical

pressure (in volts) multiplied by the current (in amperes), or EC ; and for most commercial work the electric pressure is fixed at 100 or 500 volts, such being the pressure needed for other considerations. As 746 watts is an electrical horse-power—that is, will do 550 foot pounds in a second: $\frac{EC}{746} = 1$ electrical horse-

power. Suppose, then, one would know what current will be required to give 18 horse-power when the electric pressure is 500 volts: $\frac{18 \times 746}{500} = 27$ amperes. This

electric energy, represented by 500 volts and 27 amperes, is that actually spent in doing the work by the motor. But a motor is not a perfect machine; i.e., it takes more

Fig. 2837.—ELECTRIC FORCE PUMP

power to run it than itself will give. A very good motor may give out, in mechanical energy, 90 per cent. of the electrical energy with which it is supplied; so, in the above case, one-ninth more horse-power must be supplied to the motor than it gives; that is, the dynamo must yield 20 horse-power. If the dynamo pressure be 500 volts, then the current must needs be $\frac{20 \times 746}{500} =$

29.8 amperes. Under DYNAMO it is explained how the rotation of the armature in the magnetic field gives rise to electric pressure and a current in a certain direction in the connected circuit. It needs to be pointed out here that, in structure, a motor is the same as that of a dynamo; therefore, if its armature be rotated (no matter how) it has electric pressure developed in it and the consequent current in its conductors; but this pressure and current will be opposite in direction from what they are when the machine is used as a dynamo. This opposing action cuts down the pressure in the circuit, and the efficiency of the motor is proportional to this reduction (see Fig. 2838). Thus, suppose that

Fig. 2838.

the dynamo (D) supplies a current at 100 volts, and the motor (M), by its opposing action, returns 90 volts. The efficiency of the motor will be 90 per cent. If the dynamo supplies 100 horse-power, the motor will yield 90 horse-power.

Again, 100 horse-power represents (100×550) 55,000 foot pounds of work per second; and work is measured as pressure in pounds multiplied by distance in feet, or pd . Suppose the armature of the motor rotates at the rate of 100 linear feet per second; what will be the magnetic pressure upon the armature which keeps it going?

$$pd = 55,000 \text{ and } d = 100.$$

$$p = \frac{55,000}{100} = 550 \text{ pounds.}$$

In like manner, rate of rotation may be computed if the pressure and horse-power be known; for

$$d = \frac{55,000}{550} = 100 \text{ feet per second.}$$

This means the distance the motor would roll in a second. Such motors as have been described require currents that are continuous, such as are given by a

galvanic battery; but the galvanic battery is not an economical source, which is the chief reason that electric motors were not in commercial use fifty years ago. As it was, Jacoby, at St. Petersburg, propelled a boat with an electric engine in 1830. In 1850 Page drew an electric locomotive from Washington, D. C., to Bladensburg, Md., attaining a velocity of 19 miles an hour. See ELECTRIC RAILWAY.

The reciprocal relations between the dynamo and motor were not generally known until about 1878. Since then the electric motor has been substituted for other sources of power where it has been convenient, the advantage being that the mechanical power of a steam-engine or waterfall may easily be transformed into electrical power and led by conductors to a distant place, and there transformed back into mechanical power by a motor without great loss. There is no limit of distance to which electrical energy may be sent, as the telegraph shows, for some lines are several thousand miles long; but if much energy is to be sent, there is required either high electric pressure or large conductors for the circuit. If the voltage be high, it is difficult to prevent loss on long lines; and if the conductors be large, their cost is great. At present there are several lines from ten to forty miles long, and improvements in insulating make it probable that ere long electrical energy may be used economically a hundred or more miles from its source. There are some advantages for long-distance electric transmission of energy in the use of alternating currents, and motors adapted to them. In structure these are more complicated than the continuous-current motors; but their action depends upon the same mechanical and magnetic relations, though differently disposed.

In every case, with present methods, a continuous metallic circuit is needed from dynamo through motor and back again. If the motor be fixed, the connections may all be fixed. If the motor be movable, as on street cars, the conductors must be stretched wherever the cars are to go; and movable metallic connections are provided by the so-called "trolley" arm and the wheel which rolls along on the under side of the aerial conductor, upon the upper side of a wire stretched in a conduit between the tracks, or upon a third rail laid between the others. The present range in size of motors is from such small ones as can run a fan or sewing machine, using but two or three foot pounds in a second, to the thousand horse-power locomotives used in Baltimore to draw the trains of cars through the tunnels.—There are now (1897) about 500,000 electric motors in use in the U. S., valued at not less than \$100,000,000. The amount invested in electric elevator motors alone is about \$15,000,000.

Electric Potential. The power of doing electric work. There are three leading problems with which electricians have to deal, *current*, *resistance*, and *potential*; the first indicating the sum of energy involved in any movement of electricity, the second the checks to freedom of movement through different conductors, the third the ability of a current to overcome resistance. The last named is what is known as the *potential* or *electro-motive force* of the current. Potential is usually explained as a difference of level, and illustrated from the flow of water. The ability of a body of water to do work depends, like that of a quantity of electricity, on three things: On the quantity of water, on the frictional resistance to flow, and on the difference of level of the two points between which it flows. If water flows through a pipe, the quantity which passes in a given time is the same at any cross-section of the pipe. In like manner the quantity of electricity which passes through a conductor is the same at any cross-section. But, though the quantity of water is the same at any cross-section, the pressure is not the same, but decreases as the water progresses through the pipe. This is due to resistance, or friction. In like manner, the electric potential is not the same at every cross-section of the conductor, but decreases in the direction in which the current is flowing, suffering a loss of strength in consequence of the resistance to its progress. The dynamo-electric machine is analogous to a pump, being occupied in raising electricity from a lower to a higher level. From the dynamo the current flows down hill, as it were, to the motor, the pressure or potential to which the movement is due being greatest near the dynamo and least near the motor, it being slowly exhausted in overcoming resistance. Differences in potential must be distinguished from differences in density or electrostatic charge. There will be no movement of electricity in a charged conductor unless there be a difference of potential between two points. If two conductors at the same potential be connected by a wire, no current will appear; if at different potentials, a current will be established. An electric source not only produces but also maintains a difference of potential. The electricity is replaced at the high level as it is drawn away, and the flow thus made constant. Just what is meant by the terms positive and negative electricity no one knows. They represent diverse electric conditions which seem to attract each other, or at least tend to flow together and become neutralized, with the production of an intermediate electrical condition. It is to these diverse conditions that electric potential seems due. Positive electricity may be compared to water at high level, and negative to water at low level, or the reverse, and the difference of level may vary greatly, from the slightest to the most extreme difference, the positive and negative conditions being very slight or very decided. In the former case, ever with large quantity, there will be a weak flow; in the latter, even with small quantity, there will be a strong

flow, the fall being greater, or the attraction between the two conditions stronger, as these conditions become more widely separated. It may be questioned, however, if there is any actual difference in kind between positive and negative electricity, since they may represent but differences in degree; a difference in height or level between two positive charges, for instance, producing a difference of potential in the same way as what are distinguished as positive and negative charges. Electricity thus seems capable of covering a wide range in level, as we may call this difference in condition for want of a better name, and manifests a stronger tendency to flow together and produce an intermediate state the greater the difference in degree or potential. It is the strength of this tendency which constitutes the power of overcoming resistance, and which gives energy of flow without regard to the quantity of current. Through the force of potential a small quantity of electricity, as in a static charge, may spark through a considerable width of air space; while a large quantity, of low potential, may not be able to pass the least width of air. Potential is measured by several methods. One of these is known as the method of weighing, and depends on the attraction between two oppositely charged plates or oppositely energized coils. In this the weight required to overcome this attraction is ascertained. If the charges be the same, the weight of the repulsive force is ascertained. A second method is by the use of the electrometer, which acts by the

miles an hour on the Baltimore and Ohio Railroad. But such a system, though possible experimentally, was quite impracticable, the cost of producing electricity on a sufficient scale by means of a battery rendering it far too expensive a method; and the electro-magnetic motor then in use was so imperfect a machine that only a small percentage of its electric current was utilized as power. Electric traction, therefore, fell into abeyance, and continued so until the invention of the steam-driven dynamo furnished a much cheaper source of electricity and a much more efficient means of employing it mechanically. The discovery of a cheap and easy means of electric traction was completed when it was recognized that the dynamo is reversible, and that the current produced by mechanical power in one dynamo can be reconverted into mechanical power, with comparatively small loss, in another. This discovery rendered it possible to work a railway electrically with ease and economy, the current being produced by the use of a fixed dynamo, driven by a steam-engine, turbine wheel, or any source of power; and this current being employed to drive a second dynamo, carried on the car or train engine, and acting as a motor; electrical connection being kept up between the dynamos by means of conductors with which the train is kept in contact throughout its course. The application of electricity to this purpose was first demonstrated in a practical way at the Berlin Exposition of 1879, by Werner Siemens, who exhibited an electric railway 219 yards

European enterprises, experiments were made in the U. S. by Edison, George F. Green, Stephen D. Field, and others, a dozen or more experimental roads being operated in America and Europe, whose principal utility lay in the practical lessons derived from them. Out of these various experiments developed the electric street railway system so widely introduced in the U. S. and now employed in many of the cities of Europe. The earliest of these was established at Richmond, Va., in 1887, it going into operation early in 1888, with 20 cars. In its establishment all the earlier experiments were considered, and the overhead trolley system adopted as the cheapest and most practicable. It was quickly followed by others, a number of electric roads, with nearly 150 miles of track, being in operation in the U. S. and Canada by the end of 1888. By 1892, these had increased to over 450 roads, with nearly 6,000 cars and more than 3,000 miles of track. In 1897 there were in the U. S. 15,000 miles of street railway, of which 90 per cent. were operated by electricity, using more than 25,000 cars, and employing a capital aggregating about \$1,500,000,000.—The first elevated electric railway in Europe was the Liverpool Overhead Railway, 7 miles long, opened in 1893. In 1895 the Metropolitan, a four-track road of this kind, was put in operation in Chicago, and the Lake Street elevated railway, in the same city, has used electricity as a motive power since 1896. During 1897 plans were completed for operating all the elevated railroads in New York city by this agent, the changes to

Fig. 2839.—TROLLEY CAR AND ITS ELECTRICAL CONNECTIONS.

attraction or repulsion of a charged conductor on a suspended needle or disk. A third method is by the use of the galvanometer. This is employed to measure potential in currents, which is ascertained by determining the quantity of electricity which flows per second through a given circuit, in the same way as the pressure of water on the sides of a containing vessel may be determined from the quantity of water that flows through per second. Difference of potential may, therefore, be measured by a galvanometer which gives the number of amperes, if the resistance of the circuit is known.

Electric Rail'way. The railroad system had not long been introduced when the first proposition to employ electric power in locomotive traction was made. Experiments in this direction were begun as early as 1835, by Thomas Davenport, of Brandon, Vermont, who constructed a model electric car operated on a circular track by means of batteries. In 1842 Robert Davidson of Scotland, operated, on the Edinburgh and Glasgow Railway, a car of 5 tons weight which was propelled at a speed of 4 miles an hour by an electro-magnetic engine whose current was received from a galvanic battery. In 1850 Prof. Page, of the Smithsonian Institution, Washington, employed the current from 100 large Grove cells to operate an electric locomotive, which developed 16 horse-power, and ran at the speed of 19

long, on which three cars ran at a speed of 7 miles an hour, carrying 20 persons, the power being derived from a fixed dynamo, driven by a steam-engine. The conductor through which the current reached the car was a special rail, laid between the wheel rails on blocks of wood which insulated it from the ground. Copper brushes rubbing on this rail took the current to the car motor, the circuit being completed through the car wheels and the rails on which they ran. In 1881 the first permanent electric railway was laid at Lichterfelde (Berlin). This was $1\frac{1}{2}$ miles long, the two wheel rails, which were insulated from the ground and from each other by wooden sleepers, forming the two conductors. It soon appeared, however, that the plan of using the wheel rails as the only conductors was impracticable, except on very short lines, from the difficulty of maintaining good insulation. This plan was therefore abandoned for the use of a spiral conducting rail, raised from the ground on insulating supports, which method was adopted in the Portrush and Bush Mills Railway, Ireland, in 1883. This line was six miles long, the supply dynamos being placed at a station a mile from the line and driven by water power. The Bessbrook and Newry Railway (1885), was operated on the same principle, the motors being placed on passenger cars, these serving as locomotives to draw a baggage train which ran at a speed of about ten miles an hour. In addition to these

be completed by 1899. For this purpose the "third rail" system has been selected, as in Chicago. This conducting rail is laid between the others, not fastened to the ties, but carried on blocks of wood. The running rails are used to return the current, which is taken from the third rail through a flat cast-iron shoe sliding along its upper surface, just as a trolley wheel follows an overhead wire. The mechanism of connections and motors is substantially the same as in the ordinary trolley car, but a 600-volt current is to be used instead of one of 500 volts. No shock can be taken by contact with the third rail, even when fully charged, unless some portion of the body be at the same time in contact with one of the running rails.—The electric railway system has also been extended from all the large cities to considerable distances into the surrounding country, some of them extending for many miles and connecting numerous towns and villages with neighboring cities, while many miles of track have been laid in furtherance of the project of connecting the cities of New York and Philadelphia by an electric railway. "Trolley" cars are now running in Capetown, South Africa; at Madras, India; Bangkok, Siam; Hobart Town, Tasmania, and other far-off regions. The West End line, Boston, is the longest in the world—nearly 200 miles. In addition to the systems in which each car is independent and carries its own motor, electric locomotives drawing trains of
